

Application and Mounting Instructions

**QPA63.1/AUS
+ ARG64****Application**

The QPA63.1/AUS is a standard QPA63.1 with removed front cover. This allows a better heat dissipation in the duct mounting unit ARG64

The QPA63.1/AUS must be used with the ARG64 duct mounting unit.

Maximum Operating Temperature

Environment Temperature < 43 °C (outside of duct housing ARG64)

Mounting

- Do not mount the QPA63.1/AUS on roofs or other outside places. Also when protected with an additional sun shield, the temperature will easy go beyond the maximum operating temperature of the sensor

- Please use the new duct mounting set with the high translucent cover. If you have an older duct housing, with the small transparent cover, you can order the new replacement cover. The new higher cover, improves the heat dissipation and protects the sensor from external light.
- Please do not touch the electronic components inside the QPA63.1/AUS. The device could be damaged.
