

SICLIMAT™ X

Event interface

ZLESM

Standard interface in SICLIMAT X used to transmit messages (e.g. maintenance messages, out-of-limit counter readings etc.) to third-party systems on an event-driven basis.

Use

SICLIMAT X event interface to partner systems

SICLIMAT X incorporates an event interface to third-party systems. This interface transfers data e.g. for maintenance systems, from SICLIMAT X to the third-party system on an event-driven basis. The data transfer is initiated by the partner system.

The parameters of the events to be transmitted are set accordingly in SICLIMAT X (in separate event classes). SICLIMAT X makes the relevant events available in a system-wide file in the (or in one) SICLIMAT X-OS. This file is read and evaluated by the partner system, running on separate hardware. The data is transferred using file transfer software under the TCP/IP protocol.

Ordering

When ordering, please specify the quantity, product name and type code.

<i>Type</i>	<i>Order No.</i>	<i>Specification No.</i>
ZLESM	6FL4214-4NC37	12/27215

Technical data

	Type	Event interface
System requirements	Software	Standard SICLIMAT X software, V3.1 or higher
	Hardware	Standard SICLIMAT X hardware
