

SICLIMAT™ X

Runtime license for basic HVAC modules

HVAC

The runtime license for the basic HVAC software modules is needed for all CPUs engineered with the standard SICLIMAT module package, unless they are connected to the SICLIMAT X-OS.

Use

SICLIMAT offers a comprehensive library of standard software modules for HVAC. These facilitate the cost-effective and efficient creation of heating, ventilation and air conditioning systems on SIMATIC S7 (S7-300 and S7-400). One runtime license per CPU is required for use of these standard engineering modules.

Field of application

A runtime license is required for any CPU in the range of SIMATIC products, if engineered with the SICLIMAT X engineering tool.

This applies to:

- Standalone automation stations
- Automation stations linked to WinCC
- Automation stations linked via SCADA interface to higher-level SCADA systems

Ordering

When ordering, please specify the quantity, product name and type code.

<i>Type</i>	<i>Order No.</i>	<i>Specification No.</i>
Runtime license for basic HVAC modules	6FL4214-4NC96	12/27232

Note

In the case of SIMATIC S7 automation systems connected to X-OS, this runtime license is implicitly included in the software package for connection of the automation system to X-OS (6FL4214-4NC30), and does not need to be ordered separately.
