

FC700A

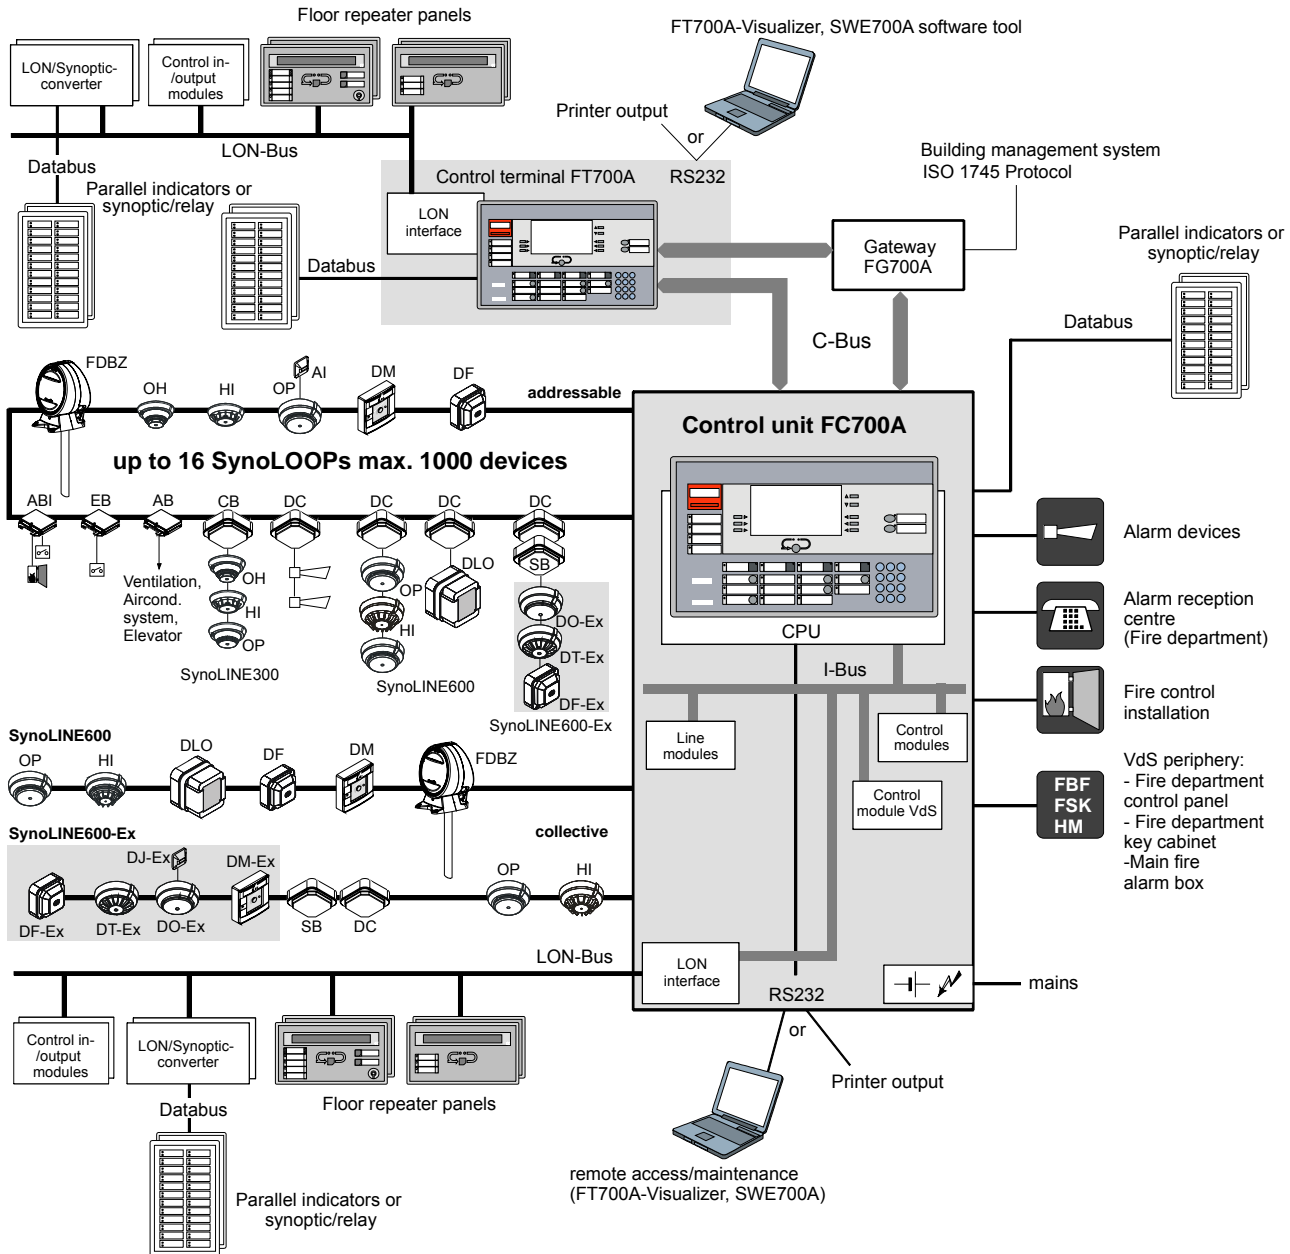

Synova™

Fire detection control unit

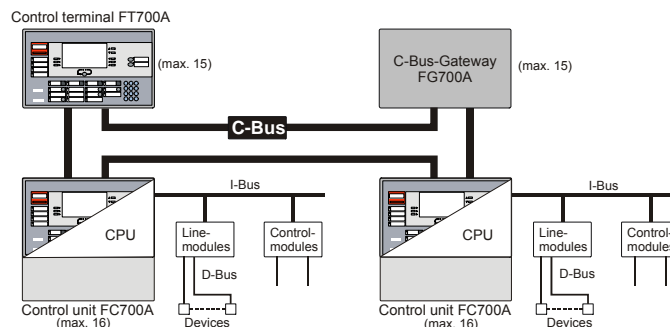

- 4 -16 Loop analogue addressable control panel
- 128 devices per loop (SynoLOOP) and up to 1000 devices per panel
- Up to 24 collective lines for Synova™ 600 serie detectors can be connected
- Up to 16 panels, terminals or gateways can be interconnected on a peer-to-peer network (C-Bus).
- Integrated emergency operation feature ensures EN54 compliance even with control panels handling greater than 512 detectors.
- For use with Synova™ 300 and 600 series detectors
- Recognition of connected devices via device read in feature.
- Superior system integrity with isolators integral to every device
- Distributed intelligence protocol removes the need for shielded cable on the detection loops.
- Friendly user terminal with soft key guided system operation
- Additional LED indicators, synoptic panels and floor repeater options
- 7 integral card slots for additional 4 loop cards, 8 Zone collective card, RS232 card, LON interface, monitored and unmonitored control modules, network gateway, and VdS module.
- BMS interface option via ISO1745 Protocol
- Powerful programming features to fit a wide range of applications.
- 6 A / 24 VDC integral PSU with space for up to 27 Ah batteries.

System overview

Expansion to a complex fire detection system

The structure of the C-Bus network permits the connection of several control panels and control terminals. The C-Bus network contains max. 16 stations (user connected). Any arrangements of station types (FC/FT/FG) are possible. SynoLOOP length may be up to 1400 m (dependent on cable type).

Function

The FC700A is a modular 4 – 16 Loop fire alarm control panel for use with Synova™ analogue addressable devices. The FC700A can be self-contained or operate on a network of up to 16 panels, user terminal or BMS gateways.

Additional cards can be added to increase integral control functions and indication as well as to monitor up to 24 collective zones.

The system can be programmed via an off line, easy to use software tool to provide a powerful distributed system of unparalleled flexibility.

Functional Elements

Analogue Addressable Detection

The control panel can process the signals from all analogue addressable Synova™ 300 and 600 series detectors as well as manual call points, flame detectors and potential free contacts via input modules. All these devices incorporate an integral short circuit isolator giving maximum system integrity. A single cabling fault on a detection loop will not result in the loss of any devices and the fault can be quickly and accurately identified reducing the amount of time spent faultfinding.

The system can be programmed to select detector sensitivity and apply intelligent signal evaluation of single and multiple detectors for safe and reliable fire detection.

Collective

Collective Synova™ 600 devices can be connected to the FC700A using the E3M080 eight zone collective line card. Up to 25 detectors can be connected to each zone. Additional collective detectors can be added via the loop by using the DC1192 input / output module (24 VDC supply required).

Conventional

Synova™ 300 detectors and other 3rd party conventional detectors may be added to the system using the CB320A input module (24 VDC supply required).

Control In-/Outputs

Freely programmable monitored and unmonitored in-/outputs are available either on the detection loop using addressable in-/output modules or internally in the panel. Further in-/outputs are available using Lon Bus control modules.

Powerful programming options enable individual in-/outputs to be switched according to the application. In-/outputs can also be controlled across the network.

System Programming

The FC700A incorporates a phenomenal degree of flexibility in its detection and related control functions. A clear windows based software programming tool allows easy adaptation of a system to meet the most complex of applications.

Application Ranges

- Large industrial complexes
- Shopping centres
- Large hotels
- Regional banking centres / Large office complexes
- Railway stations etc

Standard configuration fire control unit FC700A

Additional card positions

Accessories to FC700A (Options)

1

Z3B171

Relay module,
1 changeover contact 250VAC/10A for
connection to control modules pro-
grammable open collector outputs.
Enables interfacing between control
installations such as fire doors and
plant shut down.

2

Z3I1060

Terminal block,
with 2x20 terminals in two levels for
connection facility for the peripheral
devices.
Allows fast insertion of up to two addi-
tional cards when used in conjunction
with the Z3I050.

3

Z3I1050

Connection cable 19 conductors,
ready-to-use cable with p.c.b holder
and 2x10 plug-in-terminals.
Allows fast insertion of up to two addi-
tional cards when used in conjunction
with the Z3I1060.

4

Z1K030

P.c.b holder with integral terminal block
for where more than 2 additional cards
are required.

5

E3I020

RS232 module.
Level converter with electrical isolation
and EMI protection.
2 serial interfaces RS232 e.g. for
printer.

5

E3G060

6 Way programmable monitored output
module.
6 x individually programmable 24VDC
2A monitored outputs.
Max 4A total load.

E3I040

LON interface,
Converter between I-Bus and LON-
Bus. Up to 32 LON-Bus devices con-
nectable.
Monitored two-wire bus without loop
line function.

E3L020

16 Way input / output module.
16 x 24VDC 40mA inputs or outputs.
Each way freely programmable.
Can be used in conjunction with
Z3B171 to provide 250Vac/10A control
outputs.

E3G050

8 Way programmable relay control
module.
3 x 60V 1A free programmable change
over contacts.
5 x 60V 1A free programmable nor-
mally open contacts.

E3M111

4 Loop analogue addressable module.
For use with Synova™300 & 600 de-
vices.
Max 128 devices per loop.
Other connections: -
500mA 24VDC output

E3M080

8 Zone collective module.
8 collective stub lines each with up to
25 detectors.

6

E3H020

C-Bus-Gateway,
Connection between C-Bus network
and external RS232 compatible equip-
ment. E.g. BMS interface

7

B3R051

Parallel indicator panel,
Option to control terminal FC/FT.
Up to 8 x B3R051 per control terminal
possible.

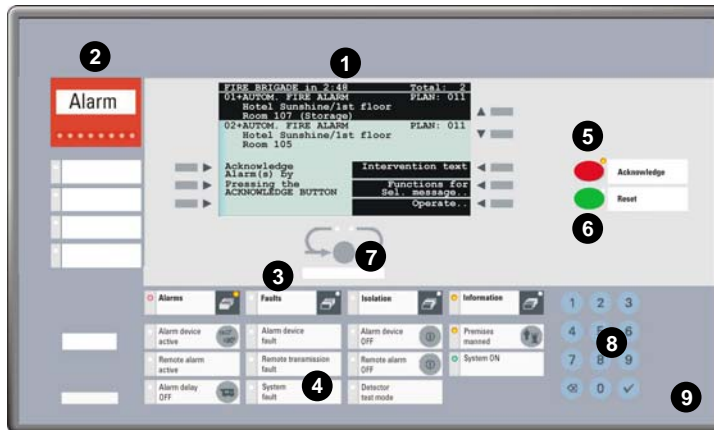

E3L030

Control module 'VdS',
I-Bus module for the connection of VdS
peripheral equipment.

8

Space for batteries

FC700A Control terminal built into front terminal (also serves as main CPU)

- 1** Large plain text display (LC display, 240x128 pixels) with background illumination and detailed plain text information on all occurring events:
 - Event type, event location, measures texts, operating states etc.
 - Directly indicated operator guidance texts in alarm situations.
 - Context and system state dependent, comfortable operation with soft keys.
 - Access to other system functions via function menus definable via user profile.
- 2** Alarm indicator field: In case of alarm, the red writing "ALARM" lights up.
- 3** Indicator fields, partly with command keys
 - 4 ergonomically classified message categories: alarm, fault, isolation and information.
 - The main keys are equipped with light emitting diodes, for a concise, guided operation.
- 4** Insertable inscription strips in various languages
- 5** Key "Acknowledge message"
- 6** Key "Reset message"
- 7** Key for switching forward alarm messages
- 8** Function key pad for numeric inputs (password, direct selection of locations etc.)
- 9** Optional key switch to enable operation

Options to control terminal

Z3S200

for the locking of doors and/or access authorization for operation

H26T030
Plexiglas door

Technical Data

Control unit	Mains supply voltage	115/230 VAC, +10 %/-15 %, 50/60 Hz
	Power consumption	40 ... 220 VA
	Emergency power operating	
	– Standard	12 ... 24 h
	– Optional	Up to 72 h
	Integral battery space	Up to 2 x 12 V 27 Ah sealed lead acid batteries
	Charging current	Max. 1.7 A (current limited)
	Charging characteristics	16 preset charging characteristics for correct charging of different battery makes
	Battery Monitoring	<ul style="list-style-type: none">– Full symmetry monitoring – 1 V Difference– Battery presence test every 55 s– Battery load test 3 A for 10 s every 23 hr– Manual battery load test via keypad
	Mains monitoring	<ul style="list-style-type: none">– Programmable mains fault warning delay 1 – 30 minutes
	Detection Loops – Standard panel	– 4 (Expandable – 16)
	Devices per loop	– Max. 128
	Integral input / outputs – Standard panel	<ul style="list-style-type: none">– Remote transmission Alarm– Remote transmission Fault– 2 x 24 VDC / 2 A sounder circuits– 7 x 24 VDC / 40 mA programmable input / outputs
	24 VDC Auxiliary outputs	1 x 630 mA (Monitored for failure)
	Operating temperature	0... +40 °C
	Storage temperature	-20... +60 °C
	Humidity	≤95 % rel.
	Color housing	light grey, RAL 7035
	Dimension	520 x 602 x 155 mm
	Protection category (IEC 60529)	IP40
	Approval	
– VdS	G204001	

Details for ordering

	Type	Part no	Designation	Weight
Control unit	FC700A-1	A5Q00004734	Control unit pre-assembled (includes one E3C011, E3G070 and E3M111)	18.000 kg
Accessories control unit	E3I020	4602390001	RS232 module	0.100 kg
	E3I040	4993100001	LON interface	0.178 kg
	E3G050	4602550001	Control module 'contacts'	0.163 kg
	E3G060	5425390001	Control module 'monitored'	0.360 kg
	E3H020	5466580001	FG700A (C-Bus Gateway)	0.424 kg
	CKQ007	A5Q00005137	EPROM-Set for FG700A	0,027 kg
	E3L020	5466450001	Control module 'Drivers'	0.153 kg
	E3L030	475 9940001	Control module 'VdS'	0.352 kg
	E3M111	5115310001	Line module SynoLOOP	0.241 kg
	E3M080	4602680001	Line module 'Collective'	0.189 kg
	E3G070	5466610001	Control Module universal (Already included in the standard version)	0.203 kg
	E3C011	5054790001	Battery charging module (Already included in the standard version)	0.250 kg
