**I/O status LEDs**

- The I/O status LEDs (green) indicate the status of the inputs and outputs (peripheral devices)
- They are also used for diagnostics

**Module status LED**

- The module status LED illuminates the transparent address key
- The LED (green) shows the module status as a whole (as opposed to the status of the I/O points)
- It is also used for diagnostics

**Address key**

- The module operates only with the address key inserted
- The module address is mechanically encoded in the address key
- When replacing the I/O module, the address key must be swiveled outward. It remains plugged into in the terminal base.

## Local override and LCD display (TXM1.8U-ML only)

---

For a detailed description, please refer to document CM110561, "TX-I/O™ Functions and operation".

### Override button

- Pressing an override button in the middle enables or disables the local override
- Pressing "+" or "-" respectively increases or reduces the output value.
- Only outputs can be overwritten. Any attempt to overwrite an input results in an error indication.

### Override status LED

- The yellow "Override" LED indicates that local override is active

### LCD display

- The following information is displayed for each I/O point:
  - Configured signal type
  - Symbolic display of process value
  - Information for diagnostics.
- **All safety-relevant functions must be implemented with external solutions**
- **The local override must not be used for safety shutdown operations**
- **In compliance with the standard (ISO 16 484-2, Section 3.110), the module executes all local overrides directly, without safety precautions or interlocks.**  
→ **Full responsibility lies with the operator.** ←
