

# MM8000 – highest security and safety with intelligent danger management

A scalable and flexible management station for any requirement.

Safety and security are central to both commercial and domestic life. With its MM8000 Danger Management Station, Siemens offers centralized management and supervision of a wide range of subsystems – from fire safety, intrusion detection, access control, and video surveillance to building automation installations. All subsystems are displayed in a uniform, clearly structured manner. A powerful graphics engine integrates existing AutoCAD files to provide a comprehensive system overview. In case of an event, MM8000 guides the user through predefined procedures, making system operation safe and easy even under stressful conditions. And should your requirements change over time, MM8000 can be quickly and easily adapted. For more information, please visit [www.siemens.com/MM8000](http://www.siemens.com/MM8000)

Answers for infrastructure.
