

Flowrite™ VF 599 Series

Three-Way Valves 2-1/2 to 6-inch Flanged Iron Body

Description

The Flowrite VF 599 Series three-way valves are designed to work with either a pneumatic or electronic actuator. They are available in both ANSI Class 125 and 250.

Features

- Valve flange face-to-face dimensions meet ISA 75.03 standards
- Direct coupled universal bonnet
- Choice of bronze or stainless steel trim
- ANSI Leakage Class IV (0.01% of Cv)
- Cartridge type packing
- Optional service flange available

Application

A typical application for the Flowrite three-way valve is the mixing of two different temperatures of water supplies.

The valve can also be used for throttling or bypass coil control applications. A pump is recommended on the coil circuit to improve the heat transfer characteristics of the coil and for freeze protection.

Product Numbers

Table 1. Product Numbers for Three-Way Valve Assemblies.

Flow Rate		Line Size		Stroke		ANSI Class 125		ANSI Class 250	
Cv	(Kvs)	Inch	(mm)	Inch	(mm)	Stainless Steel Trim	Bronze Trim	Stainless Steel Trim	Bronze Trim

Ordering a Valve Plus Actuator Assembly

To order a complete valve plus actuator assembly from the factory, combine the actuator prefix code with the suffix of the valve assembly product number. See *Flowrite™ 599 Series - 2-1/2 to 6-Inch Valve, Two-Way & Three-Way, and Actuator Assembly Selection Technical Bulletin* (155-776 [TB 256]) for selection procedure and ordering codes.

Valve assemblies can be ordered using the numbers in Table 1.

The service flange is ordered separately.

Specifications

Line size	2-1/2 to 6 inches (65 to 150 mm)
Capacity	See Table 6, Table 7, and Figure 2.
Body style	Flanged
Seat style	Metal-to-metal
Action	Three-way water mixing
Valve body rating	See Table 5.
Stem travel (Stroke)	
2-1/2 and 3-inch	3/4-inch (20 mm)
4, 5, and 6-inch	1-1/2 inches (40 mm)

Material

Body	Cast iron ASTM A 126 Class B
Body trim	See Table 1.
Stem	Stainless steel ASTM A582 Type 303
Packing	Double EPDM O-rings
Liquid service to 250°F (120°C)	
Controlled medium	Water, glycol solutions to 50%
Medium temperature range	20°F to 250°F (–7°C to 120°C)

Operating

Maximum inlet pressure	See Table 5.
Maximum recommended differential pressure for modulating service	
Bronze trim	25 psi (173 kPa)
Stainless steel trim	50 psi (345 kPa).
Rangeability	>100:1
Close-off pressures	See Table 8, Table 9, and Figure 3.
Close-off ratings	According to ANSI/FCI 70-2
Leakage rate	Class IV (0.01% of Cv)
Flow characteristics	Equal percentage for NC Linear for NO

Miscellaneous

Canadian Registration Numbers	0H7645.5... 0C0838.9...
Mounting location	NEMA 1 (interior only)
Mounting according to ANSI B16.1	See <i>Cast Iron Flange Dimensions for 2-1/2 through 6-inch Valves Technical Bulletin</i> (155-303P25 [TB 248])
Dimensions	See Table 11, Table 12, and Figure 5.
Face-to-face dimensions	ANSI/ISA S75.03
Valve weight	See Table 12.

Accessories

Figure 1. Stem Heating Element.

ASZ6.6 The stem heating element prevents the formation of ice on the stem when the medium temperature drops below 32°F (0°C). It is suited for universal use with valves having a stem or spindle diameter of 10 or 14 mm.

Operating Voltage 24 Vac/dc ± 20%

Power consumption ≤ 40 VA/30W

Service Kits

Valve packing kit	599-08020
Rebuild/repack kits	See Table 2.
Service flange	See Table 3.
Flange gaskets and bolts	See Table 4.
Stem retainer kit: 2-1/2 inch and 3-inch valves	599-10048
Stem retainer kit: 4, 5, and 6-inch valves	599-10049
Lower seat tool	See Table 10.

Rebuild/repack kit

To select the rebuild/repack service kit, know your valve body assembly number. The valve body assembly number is stamped on the tag on the valve body.

Table 2. Rebuild/Repack Service Kit Part Numbers.

Trim	Valve Size Inches (mm)	ANSI Class 125 Valve No.	ANSI Class 250 Valve No.	Kit No.
Bronze	2-1/2 (65)	599-06160	599-06170	599-10125

Selection Example

Select a valve given:

- 1 = Required flow = 500 gpm
- 2 = Desired pressure drop = 5 psi
- 3 = Select a 5-inch (125 mm) valve, Cv 250.

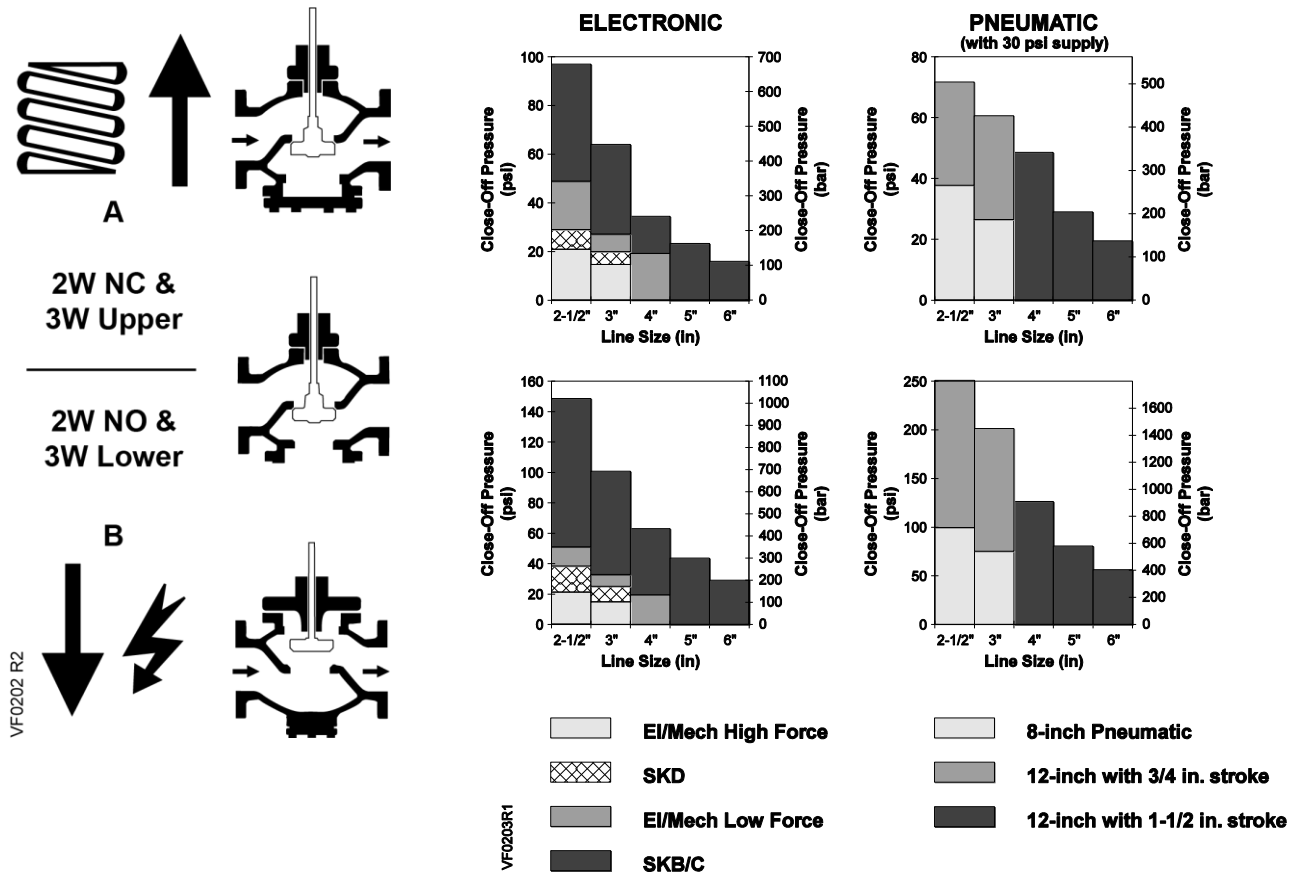

Figure 3. Close-off Pressures.

Operation

This Flowrite three-way valve is designed as a mixing valve.

As the valve stem moves downward, the flow through the NO port decreases and the flow through the NC port increases. As the valve stem moves upward, the flow through the NO port increases and the flow through the NC port decreases.

In the event of power failure, a spring return actuator returns the valve to its normal position. Non-spring return actuators will hold the last commanded position. See the Technical Instructions of the various actuators for additional information.

If this valve is used in diverting applications, the following conditions apply:

Diverting service with modulating control can only use the electro-hydraulic actuator, SKB/C. The differential pressure must not exceed 90% of the maximum differential pressure specified for the three-way valve in mixing service.

Diverting service with a pneumatic actuator can only be used with two-position control. To change over from one port to another, there must be no system pressure. The pump is turned off.

Figure 4. Three-Way Valve Operation as a Mixing Valve.

Sizing

The sizing of a valve is important for correct system operation. An undersized valve will not have sufficient capacity at maximum load. An oversized valve may initiate cycling and the seat and throttling plug can be damaged because of the restricted opening. Correct sizing of the control valve for actual expected conditions is considered essential for good control.

Some variables which must be determined are:

- The medium to be controlled: water, etc.
- The maximum inlet temperature and pressure of the medium at the valve.
- The pressure differential that will exist across the valve under maximum load demand.
- The maximum capacity the valve must deliver.
- The maximum line pressure differential the valve actuator must close against.
- See AB-1 *Control Valve Selection and Sizing* (155-285) for further recommendations.

See Table 6 and Table 7 for valve capacities.

Mounting and Installation

- Install the valve so that the flow follows the direction of the arrow indicated on the valve body identification tag.
- For best performance, install the valve assembly with the actuator above the valve body. The valve and actuator can be installed in any position between vertical and horizontal. Siemens Building Technologies does not recommend installing the valve assembly below horizontal or upside down.
- If installing a service flange, see Table 13 for proper placement.
- For flange dimensions and bolt hole information, see *Cast Iron Flange Dimensions for 2-1/2 through 6-inch Valves Technical Bulletin* (140-0038 [TB 248]). Allow sufficient space for servicing the valve and actuator. See Table 12 for valve body dimensions. See Table 11 and Figure 5 for dimensions of the service envelope recommended around the actuator.
- A lower seat tool is required for removing a three-way valve. See Table 10 for part numbers.

NOTE: Instructions for field mounting an actuator, spring adjustments, wiring diagrams, and start-up are covered in the Technical Instructions and Installation Instructions for each actuator.
