

Critical Storage Solution

Maximize your investment, protect your products

Building Technologies

SIEMENS

The Critical Storage Solution from Siemens Building Technologies, Inc. is a complete system that monitors, alarms and reports on temperature in critical storage areas that store vital products/ materials used in the treatment of patients and the manufacture or research of drugs/therapeutics.

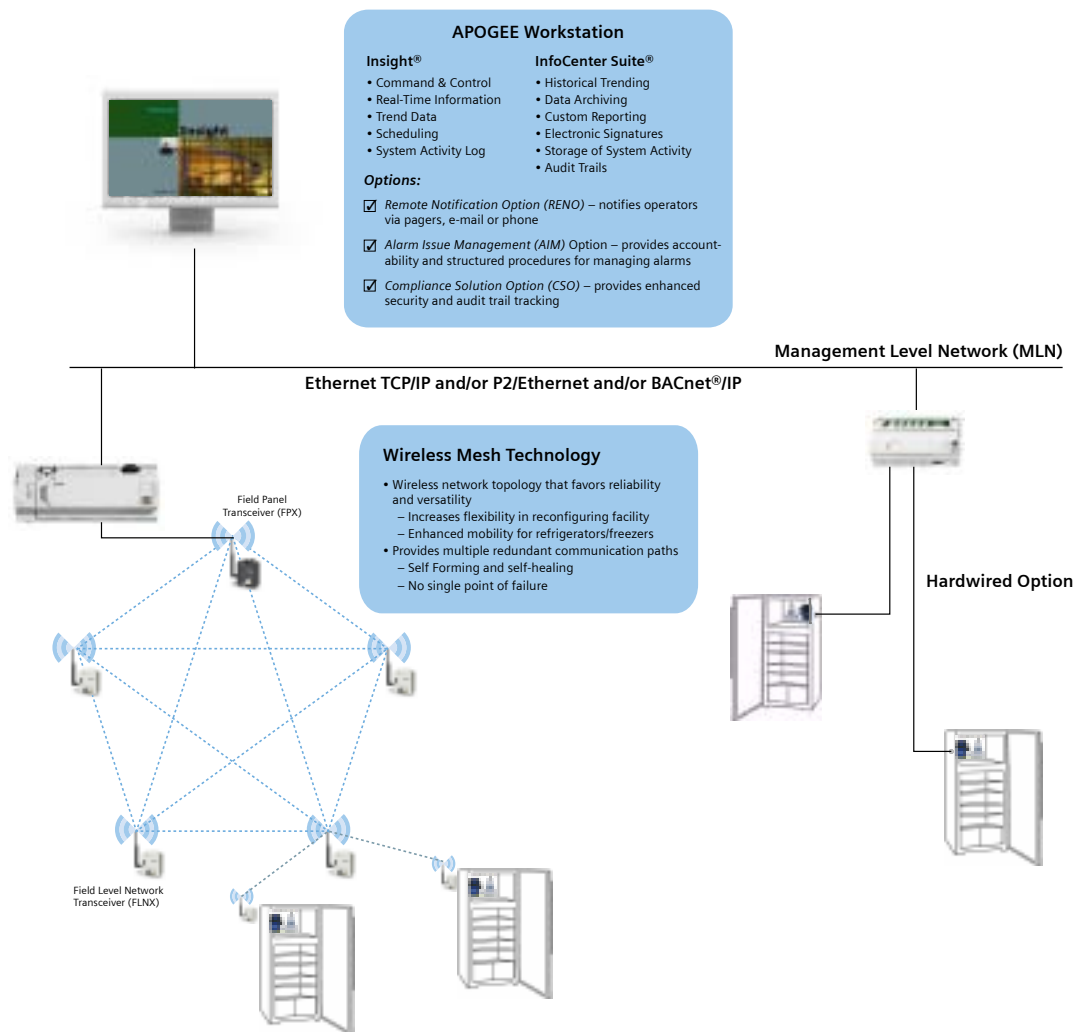

The platform for our solution is your existing APOGEE® Automation System, which means you:

- **Avoid learning/maintaining** yet another disparate monitoring system
- **Maximize use of existing assets** by applying your existing Building Automation System (BAS)
- **Achieve operational efficiencies** by allowing functional areas to concentrate on core activities rather than manual recording/archiving
- **Meet regulatory/accreditation requirements** with the least amount of time and resources
- **Mitigate risk** from loss of costly product, application of damaged product and human error

Leveraging your existing APOGEE BAS is easy:

Our complete life cycle approach begins with an assessment of your current situation and your future goals so we can develop a solution specific to your long-term needs.

The final solution incorporates an engineered monitoring/control infrastructure and information management system.
