

A close-up, top-down view of a white, circular Siemens Cerberus PRO fire detector. The detector has a textured surface and a central lens. The words "DO NOT PULL" are embossed on the bottom half of the device. The background is a light blue gradient.

SIEMENS

Cerberus PRO – fast, reliable fire detection with patented technology

Reliable detection thanks to special *ASAtechnology™*

www.siemens.com/cerberus

Fast and reliable fire detection is essential to protect people and assets. The Cerberus™ PRO detector range is the ideal solution – even if occasional deceptive phenomena occur. Because the detectors offer advanced signal processing and selectable parameter sets, they ensure very fast and highly reliable fire detection – even in the most demanding environments.

For sophisticated applications, Cerberus PRO offers ASA neural fire detectors. For standard applications, the multi-sensor fire detector, the smoke detector and the heat detector are best choice. A broad range of special detectors – from linear smoke detectors, flame detectors to Ex detectors – rounds off the clever Cerberus PRO offering.

Answers for infrastructure.
