

SIEMENS

Honey, do you feel comfortable like at home?

Our solutions make patients feel like guests by protecting them and maximising their comfort.

Solutions for Hospitals

The patient room solution from Siemens contributes to the well-being of patients. Our multi-function bedside terminals allow patients to adjust their individual room conditions, access Internet and telephone service, and select movies – all without outside assistance and without any compromises regarding security.

Furthermore, our dedicated solution portfolio for the hospital infrastructure reaches from medical devices, IT and telecommunication solutions to safety and security technology, and building automation systems. The integration of all disciplines enhances patient and staff comfort and increases safety and efficiency at the same time.
