Siveillance Vantage – Bosch Video Management System integration

www.siemens.com/siveillance-vantage

The Siveillance Vantage – Bosch Video Management System (BVMS™) integration enhances the operational processes for event-driven video verification and investigation within a command and control center.

Siveillance™ Vantage is a workflow-oriented, redundant and networked command and control solution which incorporates an integration platform for security subsystems, emergency and communication. Siveillance Vantage fully supports today's command and control center processes and can be easily adapted to customer-specific security needs and security policies.

The BVMS is an enterprise IP video security solution that provides management of digital video, audio and data across an IP network. It is designed to work with Bosch video surveillance products.

By leveraging the best features of both systems, the Siveillance Vantage – BVMS integration delivers exceptional flexibility and efficiency in managing video-related security events, helping to ensure that critical events are effectively captured, monitored and managed.

Answers for infrastructure.

Siveillance Vantage – BVMS integration

The scope of this integration focuses on the operational processes in a command and control center, where video is required for event-driven verification and investigation of the on-site situation.

This integration:

- Displays live or recorded camera video streams in BVMS client
- Provides additional control and flexibility for operators to access and receive security-relevant video streams to assist in incident handling
- Improves operator efficiency by conveniently incorporating video management into the command and control center's customized workflows
- Allows operators to quickly and easily activate video feeds
- Ensures that operators are equipped with integrated video surveillance to manage critical emergency situations

Functionality

- The integration of BVMS into Siveillance Vantage uses an embedded component to present and manage live and recorded video from all types of video sources in BVMS by controlling the BVMS client
- Siveillance Vantage activates either live or recorded video in the assigned BVMS client

- Siveillance Vantage displays event-based live video views covering the area of the incident
- At any time, live and recorded video can be presented in response to an operator action
- Siveillance Vantage can be activated to trigger automatic PTZ controls to capture relevant activity within an incident area
- Allows for parallel operation and control by both Siveillance Vantage and BVMS operators
- Advanced functions, such as detailed search or administration of the BVMS system, are available via the BVMS client

Technical information

- Supports control of the actual range of video devices provided and released for BVMS
- As per the Siveillance Vantage client, one BVMS client is required
- The integration requires both Siveillance Vantage options "Bosch Video Management System Integration" and "External Program Integration"

Compatibility

For detailed information on compatibility of Siveillance Vantage and Bosch Video Management System, please contact your Siemens representative.

Highlights

- Streamlines the management of live and recorded video by incorporating it within Siveillance Vantage workflows
- Flexibility and enhanced control to video operators by allowing navigation and control of cameras within the BVMS
- Reviews and analyzes video recordings within the BVMS, accessing playback and record controls directly from Siveillance Vantage

Ordering information

Order number	Short name	Comments
P24590-P227-A61	Bosch Video Management System integration	Siveillance Vantage – BVMS integration (1x required per Siveillance Vantage installation)
P54590-P201-A50	External Program Integration	Activation of external programs through command line parameter (1x required for any external program call in a Siveillance Vantage installation)
