Siveillance Vantage – Desigo Insight integration

www.siemens.com/siveillance-vantage

An intelligent interface which provides bi-directional communication between Siveillance Vantage and Desigo Insight allowing flexible control and management of more than just your security environment, but your building automation system as well.

Siveillance™ Vantage is a workflow-oriented, redundant and networked command and control solution which incorporates an integration platform for security subsystems, emergency and communication. Siveillance Vantage fully supports today's command and control center processes and can be easily adapted to customer-specific security needs and security policies.

Desigo™ is the modular and scalable building automation and control system from Siemens. The Desigo Insight management station implements industry-leading technologies that help companies achieve energy efficiency and smart consumption goals, while creating a more comfortable environment for customers and employees.

This integration will allow command and control operators to have greater visibility and easier access to all their subsystems, utilizing a common platform for monitoring and controlling video, access control, alarm management and building automation.

Answers for infrastructure.

Siveillance Vantage – Desigo Insight integration

This integration provides bi-directional communication between Siveillance Vantage and Desigo Insight. Siveillance Vantage utilizes the flexible alarm management interface provided by Desigo Insight, giving operators a user-friendly graphical display of all their building systems.

This integration:

- Gives organizations additional control and flexibility of their safety, security, building automation and energy systems, so that they can determine when and where to make adjustments for optimized day-to-day operations
- Improves operator efficiency by conveniently incorporating building automation into the command and control center's customized workflows, enhancing visibility and functionality (e.g. HVAC status and controls)
- Allows operators to quickly and easily access reports and information detailing the historic and current status of the building management system, using layouts and data that are tailored specifically to suit the needs and authorization level of each user
- Ensures that operators are well-equipped to manage critical emergency situations
- Provides consistent compatibility of both Siveillance Vantage and Desigo Insight that protects investment throughout the entire building life cycle

Functionality

The functional scope of this integration is focused on handling of alarms and events as well as operational controls from Siveillance Vantage into Desigo Insight. This functionality includes:

- Monitoring as well as management of prioritized alarms of the Desigo building automation system
- Monitoring and controlling the operational state of utility equipment
- Ability to control specific utility equipment during emergency conditions from the command and control user interface
- Activation of operational workflows, automatically based on an event or upon operator action

Technical information

Integrates the actual range of building automation devices and services provided as released using the SODI-API.

Compatibility

For detailed information on the compatibility of Siveillance Vantage and Desigo Insight, please contact your Siemens representative.

Highlights

- Improves operator efficiency by conveniently incorporating building automation into the command and control center's customized workflow
- Controls specific utility equipment during emergency condition from the command and control center
- Delivers the highest security measures, an optimal and efficient infrastructure and well-prepared operators who can efficiently manage and respond to both day-to-day issues as well as critical events
