

Siveillance Vantage – Omnicast integration

www.siemens.com/siveillance-vantage

Integrating IP video surveillance, digital video management and command and control functionality to enhance operational processes and ensure an effective response to routine and emergency incidents for your critical infrastructure.

Siveillance™ Vantage is a workflow-oriented, redundant and networked command and control solution which incorporates an integration platform for security subsystems, emergency and communication. Siveillance Vantage fully supports today's command and control center processes and can be easily adapted to customer-specific security needs and security policies.

Omnicast is the IP video surveillance and digital video management system from Genetec.

This integration enhances the flexibility and functionality of Siveillance Vantage by allowing organizations to leverage existing hardware and infrastructure, ensure that critical incidents are monitored, acknowledged and effectively managed, as well as organize and communicate with and dispatch resource personnel.

Answers for infrastructure.

Siveillance Vantage – Omnicast integration

The scope of this integration focuses on the operational processes in a command and control center, where video is required for event-driven verification and investigation of the on-site situation.

This integration allows users to:

- Access and view live and recorded video from sources maintained and administered in Omnicast from the Siveillance Vantage client monitor
- Show live or recorded video on the video wall from several video sources
- Improve operator efficiency by conveniently incorporating video management into the command and control center's customized workflows
- Quickly and easily activate video presentation
- Ensure that operators are equipped with integrated video surveillance to manage critical emergency situations

Functionality

- Seamless integration, presents live and recorded video originating from Omnicast
- Shows live event-based video from cameras in the incident area, streaming on a separate video window
- The video monitor layout is flexibly controlled by Siveillance Vantage as part of the video wall functionality

- Supports control of PTZ cameras
- On events, Siveillance Vantage triggers the applicable preset positioning of PTZ cameras to cover the incident area
- Provides embedded controls when viewing recorded video, such as fast forward, fast rewind, play, stop, pause, etc.
- Allows for parallel operation and controls from both Siveillance Vantage and Omnicast operators
- Advanced functions, such as detailed search or administration of the Omnicast system, are available via the Omnicast client

Technical information

- Integrates the actual range of video devices provided and released for Omnicast
- The integration requires both Siveillance Vantage options "Genetec Omnicast VMS Integration" and "External Program Integration"

Compatibility

For detailed information on the compatibility of Siveillance Vantage and Genetec Omnicast, please contact your Siemens representative.

Highlights

- Accesses and views live and recorded video from sources maintained and administered in Omnicast from the Siveillance Vantage client
- Allows parallel operation and control of IP video cameras and recordings from both Siveillance Vantage and Omnicast

Ordering information

Order number	Short name	Comments
P54590-P226-A61	Genetec Omnicast VMS integration	Siveillance Vantage – Omnicast interface and video viewer application (1x required for a Siveillance Vantage installation)
P54590-P201-A50	External Program Integration	Activation of external programs through command line parameter (1x required for any external program call in a Siveillance Vantage installation)
