Siveillance Vantage – SIPORT integration

www.siemens.com/siveillance-vantage

Integrating access control, time recording and command and control functionality to deliver a more robust suite of security features for operators of critical infrastructure.

Siveillance™ Vantage is a workflow-oriented, redundant and networked command and control solution which incorporates an integration platform for security subsystem, emergency and communication. Siveillance Vantage fully supports today's command and control center processes and can be easily adapted to customer-specific security needs and security policies.

SIPORT Enterprise R2 is a flexible, scalable and modular access control and time management system from Siemens.

Together with Siveillance Vantage, this integration provides a solution that is well-equipped to help command and control operators more easily manage restricted areas and enable employees, vendors and contractors to enter specific areas for the designated times.

Answers for infrastructure.

Siveillance Vantage – SIPORT integration

The Siveillance Vantage – SIPORT integration automatically receives and displays alarms and messages relayed from SIPORT. These alarms and signals are processed and displayed within the event window of Siveillance Vantage and assigned priority based on customized Vantage settings defined by the customer. Messages are handled simultaneously within SIPORT, but it's important to note that all signals will be logged in Siveillance Vantage.

This integration:

- Improves operator efficiency by incorporating access control management into the command and control center's customized workflows
- Defines priorities of alarms and other signals in Siveillance Vantage
- Recommends a course of action for event handling, subsequent command and control as well as tracking of measures

Functionality

Siveillance Vantage allows for deep integration of SIPORT Enterprise R2 into the command and control workflow.

This includes:

- Monitoring status signals such as door open, door closed, door locked, door normal operation
- Granting or denying access to a restricted area and reason for invalid access
- Monitoring and processing of alarms, such as door forced, door held open, under duress, tamper, input (configurable contacts), system failure
- Controlling commands sent from Siveillance Vantage: open door (permanent), open door (once), lock door, unlock door, normal door
- Activating/deactivating control output, acknowledge and reset
- Monitoring of communication to SIPORT
- Advanced functions, such as cardholder management or administration of the SIPORT system, are available via the SIPORT client

Compatibility

For detailed information on the compatibility of Siveillance Vantage and SIPORT Enterprise R2, please contact your Siemens representative.

Highlights

- Easy display of access control system status information, alarms and events all on one central user interface
- Improves operator efficiency by conveniently incorporating access control management into the command and control center's customized workflows

Ordering information

Order number	Short name	Comments
P54590-P207-A60	SIPORT integration	Integration of SIPORT into Siveillance Vantage for access control functionality (1x required per integration)
