Comfortable and safe remote control with IR-products

IR-products

Multiple usage

In many cases it would be good if numerous functions could be controlled from any point in the room. This applies especially for conference rooms. Signals from the handheld transmitter are limited to the particular room, so there is no cross-room interference. It is possible, however, to take the handheld transmitter into other rooms in order to control the same functions there.

Unlimited user-friendliness

In hospitals, user-friendliness means being able to control room functions if necessary from the bed. Infrared signal transmission for control commands is not subject to any legal restrictions.

Highlights

- IR systems work reliably even without 'eye-to-eye' contact between the transmitter and the receiver
- Interference-free operation in any environment (also in heavy radio traffic)
- Low-cost remote control with the same hand-held transmitter in different rooms
- Compatible when used as a replacement or extension
