## Save energy at all times through usage of valve actuators

Valve actuator AP 562/02

### Continuous valve adjustment

The actuator implements the constant control variable of the GAMMA room temperature controller in a continuous manner. The two additional binary inputs permit extra functions such as anti-freeze protection and added-comfort function.

### Simple commissioning

The automatic adjustment of the valve stroke after the valve actuator engages on the small valve ensures quick commissioning. In addition, the anti-theft device protects against unauthorized disassembly.

### Highlights

- Continuous valve adjustment guarantees constant functionality
- Current valve position is easy to establish thanks to five LEDs for the display LED
- Two separate binary inputs for additional functions such as anti-freeze protection and an added-comfort function
- Automatic adjustment of the valve stroke guarantees simple commissioning
