

Fire safety control where and when you need it

Desigo CC for fire and life safety systems

www.siemens.com/desigocc

Desigo CC helps users respond intelligently and immediately to fire and life safety events and alarms.

Increase safety and productivity

Gain a new level of control over your building's fire and life safety systems. Desigo CC™, Siemens' new solution for the management of fire and life safety events, centralizes control to deliver superior protection and efficiency. With its enhanced graphics and logical interface, the building management station Desigo CC enables you to better manage and monitor events throughout your facility. Desigo CC supports FireFinder® XLS, MXL®, and Desigo fire control panels as well as IP cameras. Through live video you can easily verify alarms and events throughout your facility.

Cerberus™ DMS can also integrate building automation systems from Siemens, providing a Total Building Solution with one system. The uniform, harmonized and simple integration of a wide range of disciplines enables you to centrally manage, supervise and control different integrated systems installed in your facility. With greater control, you can be more productive while ensuring the safety, security and comfort of your facility and its occupants.

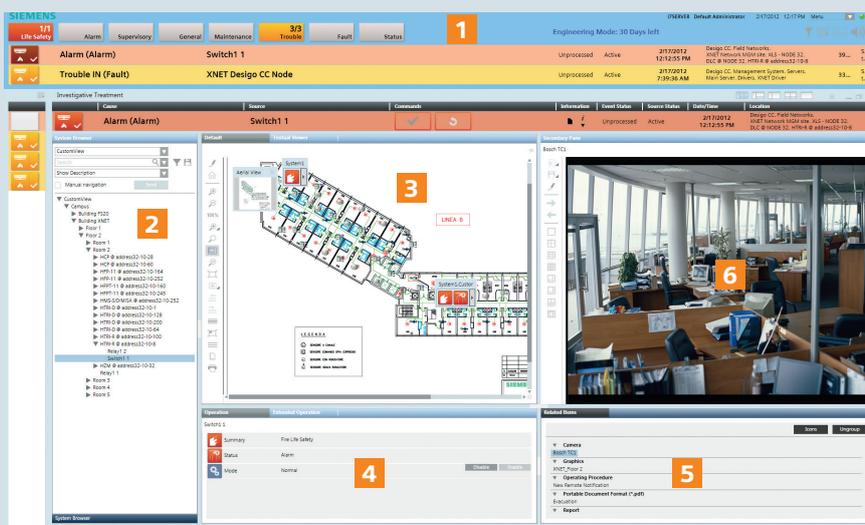

Improved visibility

Greater visibility means greater awareness. Desigo CC's customizable interface, which supports multiple user profiles, provides each user with the critical information they need at their fingertips. With its easy-to-read, workflow-driven interface, Desigo CC displays the severity and category of each event. It also shows you the number of unacknowledged events in your facility. As a result, you have a better understanding of each event, and you can respond faster and smarter.

Using different categories, you can also prioritize events and alarms. Desigo CC's unique workflow process will then know what type of events take precedence. It's a truly intelligent system that makes it easier to manage and monitor the safety of your building.

Improved event management

Desigo CC helps you to ensure safety and productivity more efficiently. A built-in assisted treatment function for alarms guides the operator through a predefined procedure in a simple and intuitive way. This leads to a fast and correct intervention, reduction of human errors and consistent application of procedures and policies.

1. Summary bar shows unacknowledged and total events currently in the system by category, with life safety events at the top
2. System manager displays all devices and applications in the system, and finds devices in alarm mode
3. Primary pane shows additional information about a selected device – e.g. graphical location of fire detector in alarm mode
4. Contextual pane provides detailed data about a selected device, including current state and immediate access to available commands
5. Related links provide more information on and applications for a device, including special procedures
6. Secondary pane shows additional information about a selected device – e.g. a real-time camera view of an event

Desigo CC helps users respond intelligently and immediately to events and alarms because:

- integrated graphics support improved zooming and vector graphics,
- events and alarms can be further filtered for improved focus and reduced distractions from unrelated events,
- custom priority levels can be defined and used to send notifications to specific recipients.

Desigo CC makes notifying external users easy, by utilizing the power of the remote notification feature. Users can select a variety of notifications such as e-mail, pager or text message to one or up to 50 recipients. Wherever you are, you can be assured your building is safe.

Management station

Desigo CC is a powerful management station option for centralized command of fire alarm networks. And because it's Siemens, you know it complies with the highest standards for safety. Desigo CC

is listed as a primary display and control point for fire alarm systems under UL 864 and ULC-5527 for control units. Desigo CC supports the following fire safety systems from Siemens: Desigo Fire Safety and FireFinder XLS/MXL.

The right network

Incorporate the leading fire and life safety equipment from Siemens of your choice. Whether you choose Desigo Fire Safety, FireFinder XLS or MXL, there's a high-speed network tailored for your equipment. Desigo CC works with a range of communication networks, including FCnet for Desigo Fire Safety and XNET for FireFinder XLS and MXL systems.

Safety made easy

With Desigo CC as your management station for fire safety, you have increased knowledge that helps you respond faster to events and alarms. Managing your facility and protecting the assets and people in it, has never been easier.

Highlights

- Delivers superior protection and efficiency through a single interface for multiple building systems
- Provides greater visibility into events and alarms
- Enables fast and efficient response to life safety events
- Offers remote notification via pager, SMS or e-mail
- Complies with the highest standards for safety, including UL 864, UL 1076, ULC-5527, UOJZ and PAZX
- Uses built-in assisted treatment function for alarms to guide operator through predefined procedures
- Reduces human errors and ensures consistent application of procedures and policies
