

Ensure emergency messages reach all recipients in your organization

Desigo CC for Desigo Mass Notification

Desigo Mass Notification from Siemens leverages your organization's local networks to provide truly effective communication that reaches your audience wherever they are.

Communication effectiveness

Desigo™ Mass Notification of Desigo CC™ is an efficient and flexible application that uses today's most common communication technologies to provide notification functionalities to the Desigo CC building management platform. It is a premise-based alerting system that gives you full coverage. Moreover, it allows for routine and emergency communication integration with social media and bulk messaging provider services to deliver meaningful, relevant critical information.

Desigo CC for Desigo Mass Notification:

- utilizes a centralized portal to seamlessly integrate diverse communication technologies,
- ensures event handling, monitoring and integration of premise-based devices as well as monitoring of all connected devices,
- automatically initiates emergency events in the system with key trigger mechanisms,
- allows for efficient recipient targeting and quick configuration of messages under stressful situations (from text, to audio) with guided prompts,
- leverages your current infrastructure and integrates key communication modalities,

- offers operator-specific configuration of the user interface to create optimized working conditions,
- provides a consistent, streamlined operator experience,
- includes an organized, clear user interface to easily manage all incoming alerts and outgoing messages,
- enables operators to use the easy dial feature to remotely call in (with the proper authorization) and to initiate an incident over the phone,
- provides customized wizards to guide operators step by step and offers a workflow-driven structure.

With Desigo CC for Desigo Mass Notification, you can ensure that your routine and critical messages are effectively broadcast and that they reach all intended recipients. You will enjoy peace of mind, knowing your personnel can execute and efficiently deliver appropriate responses (based on well-prepared action plans) for routine and emergency situations. The system is easy to use and operate, enabling operators to provide efficient and appropriate communication when it matters most.

Desigo Mass Notification structure

Desigo Mass Notification ensures appropriate operator response and compliance with your company's emergency response plan. You can enforce your plan by delivering reliable, effective and targeted emergency messages at the push of a button.

Flexibility and scalability

Desigo Mass Notification integration capabilities leverage existing infrastructure to provide flexible and scalable solutions. Desigo CC gives you a centralized, yet customizable platform to integrate and streamline the management of single or multiple disciplines, from building management up to fire safety and security, for example, mass notification.

- It centrally delivers emergency notifications and provides critical incident management across a variety of audible and visual communication modalities. Our flexible licensing concept offers solutions to satisfy all needs, from those wishing to start small to those requiring sophisticated multi-modal integration. The open architecture

supports current enhanced functionality as well as future technologies: text-to-speech engines, bulk service messaging, digital signage and other services from recognized domain experts

- It enables centralized emergency management across multiple buildings in a campus deployment. It also allows customizing the interface and tailoring the operator's workflow with specialized templates – whether your site is small or complex. Using a centralized dashboard and a consistent workflow-based interface, operators can reliably manage, track and review multiple emergency incidents

Desigo Mass Notification gives you the flexibility to grow and expand as your situations demand. It grows with your requirements, providing the flexibility needed for you to expand, upgrade and integrate with existing technologies. Enjoy a high return on your investment by leveraging your existing communication infrastructure.

Highlights

- Centralized portal integrates various communication technologies, from premise-based to cell phones, social media alerting and bulk messaging
- Streamlined activation allows operators to easily open and initiate an incident
- Messages are predefined or customizable (editable on the fly), immediate or scheduled, and targeted to specific zones, individuals, groups or devices
- Incident and notification browser screens allow easy browsing of active and closed incidents and corresponding messages
- Powerful platform from strong global supplier meets your building control and safety needs today and prepares you for tomorrow's challenges
- Open, flexible platform protects your long-term investment
