Keep Your Healthcare Facility in Constant Preparedness for Fire & Life Safety Audits

Advantage Services®
Fire Services for Healthcare Accreditation

It’s important that you be ready, without being overwhelmed.
Joint Commission accreditation is the gold standard in healthcare certification, and as a facility professional, the responsibility for Fire & Life Safety Code compliance falls to you. Which means that you’re on the spot when Joint Commission surveyors, including a Life Safety Code® Specialist, arrive unannounced.

Yet with the overwhelming number of operating challenges you face on any given day, it’s unlikely you have time to continually think about fire & life safety documentation. So it’s good to know that Siemens does. Siemens Fire Services for Healthcare Accreditation are designed to give you the peace of mind knowing that a sudden visit is never a cause for alarm.

Leave the documentation management to us.
The Joint Commission’s accreditation program requires that you maintain an extensive set of fire & life safety documentation, properly completed, appropriately organized and easily accessible. Missing paperwork or incomplete entries are more than embarrassing; they can trigger non-compliance requiring corrective action.

Siemens Fire Services for Healthcare Accreditation ensure proper documentation of all inspection and test reports related to fire & life safety systems in your buildings and are designed to simplify and streamline the audit process. The program provides you with an annual delivery schedule to ensure no test is overlooked. Regular review meetings can be included to familiarize your staff members with all related documentation and paperwork as well as prepare them to speak knowledgeably with surveyors during an audit.

Our goal is to help you avoid unpleasant surprises and achieve a higher audit score, plus you’ll be freed up to devote more of your limited resources to daily operations.
Our highly trained professionals speak the Joint Commission language. You can depend on Siemens testing, inspection and documentation to mirror the very latest Joint Commission Environment of Care requirements. The Siemens Fire & Life Safety service team maintains in-depth knowledge of Joint Commission standards, as well as National Fire Protection Association (NFPA) Life Safety Code® standards as it relates to healthcare environments.

Siemens technicians are trained at the world’s most advanced fire safety training laboratory in Buffalo Grove, IL — where they receive hands-on training and experience with systems from almost every major manufacturer. Our Siemens technicians are NICET-certified and supported by the collective knowledge and power of over 100 nationwide Siemens branches.

Make Siemens your single source for Fire & Life Safety. When Siemens partners with your facility, you can end the hassle of managing multiple life-safety vendors. With one service agreement, you can consolidate testing and maintenance processes, scheduling and documentation for all your fire & life safety systems — whether from Siemens or another manufacturer.

Testing and maintenance services can include fire alarm systems, sprinklers, kitchen hoods, portable extinguishers, fire pumps, fire suppression systems and more.

Siemens Fire Services for Healthcare Accreditation Program can be tailored to your exact needs:

• Testing of fire & life safety systems to Joint Commission and other regulatory standards
• Easy-to-read, customized test reports, created per each applicable Element of Performance standard established by the Joint Commission
• Comprehensive inspection management in the form of a detailed inspection schedule, structured around the Joint Commission Elements of Performance standards
• Deficiencies tracking and repairs in full accordance with applicable Joint Commission standards and deadlines
• Account management services including frequent review meetings to discuss present and future needs
• Assistance with interpretation of Joint Commission standards and requirements
