Healthcare Security Solutions

Building Technologies
Meeting the Challenge
More than ever before, security is one of healthcare’s fundamental infrastructure needs.

The security requirements of a hospital, clinic or other major healthcare facility are critical, specialized and diverse. Evolving requirements which must be managed include regulatory compliance, technology advancements, and employee training. Hospital security departments must make the facility accessible to the community it serves 24 hours a day while providing a safe environment for the people and assets within its perimeter. Potential risk and threats require sophisticated solutions with immediate application and flexibility for the future.

Security Solutions
Delivering quality care requires quality environments and safe, secure facilities. Combining advanced technology with extensive industry expertise, the Building Technologies Division of Siemens delivers customized security solutions, impacting the experiences of patients, visitors, and staff members, as well as improving the bottom line.
Healthcare Security Systems & Solutions

Medical Office Building
- Electronic Access Control
- Electronic Locks & Keys
- Closed Circuit Surveillance

Construction
- Electronic Access Control
- Closed Circuit Surveillance
- Intrusion Detection
- Perimeter Protection
- Elevator Control

Hospital
- Electronic Access Control
- Credential Management
- Photo ID Badging
- Elevator Control
- Closed Circuit Surveillance
- Digital Video Transmission
- Digital Video Recording & Retrieval
- Intelligent Video Analysis
- Intrusion Detection
- Perimeter Protection
- Intercom & Emergency Communications

Parking Structure
- Electronic Access Control
- Closed Circuit Surveillance
- Intercom & Emergency Communications

Optimal security. Maximum peace of mind.
- Provide a safe, secure healthcare environment
- Increase patient satisfaction
- Protect physical and logical property, including confidential patient records
- Attract and retain key staff and employees
- Meet regulatory and accreditation requirements utilizing minimal time and resources
- Mitigate risk and reduce liability exposure associated with inadequate security measures

Customized solutions. Maximum impact.
- Complete Life Cycle Approach
  - We optimize security management systems through a detailed planning and technology selection process, allowing an excellent return on investment
- Integration Capabilities
  - We leverage our integration capabilities through carefully planned strategies, increasing operating efficiencies and reducing operational and installed costs
  - We implement flexible, expandable solutions providing the agility needed to operate today and in the future
- Experienced Solution Team
  - We know healthcare and how to deliver efficient, effective security solutions in a demanding hospital setting
Our Healthcare Security Solution takes a comprehensive approach to meeting the challenges you face every day. From the initial site assessment survey through ongoing support, we provide the systems, services, and resources for a facility that is compliant, efficient, cost-effective, and most importantly, as safe as possible.

---

| Planning | Begins with in-depth discussion and evaluation to understand your security management program, threats, risks and current security measures. With this information, we develop a security solution to help you create a safe, secure healthcare environment. |
| Implementing | Puts in place a unique mix of security systems and integration strategies to mitigate risks. |
| Managing | Uses security system data to provide for the integrity of the system. |
| Improving | Includes a range of services that ensure your day-to-day operations are addressed around the clock, according to established standards. Equally as important, our highly trained and experienced local staff continually looks for new ways to improve your operation. |

---

**Security Solutions for Healthcare**

Delivered per Codes, Standards, Guidelines and Good Engineering Practices
