## Smart Thermostat

Smart is understanding your needs.

[siemens.com/smart-thermostat](https://www.siemens.com/smart-thermostat)

It is the unique combination of benefits for both professional installers and end customers that makes the Smart Thermostat so different.

### Easy and intuitive to use: at home and on the go

The Smart Thermostat features an easy and intuitive user interface. With a display reduced to the essentials, users can control their heating system with easy clicks. The Smart Thermostat app enables full control and monitoring of the Smart Thermostat from anywhere at any time.

### Always in touch with its surroundings

The six built-in sensors in the Smart Thermostat are as powerful as they are accurate. Thanks to these sensors, the Smart Thermostat can work fully autonomously. It continuously controls the temperature and humidity and monitors air quality.

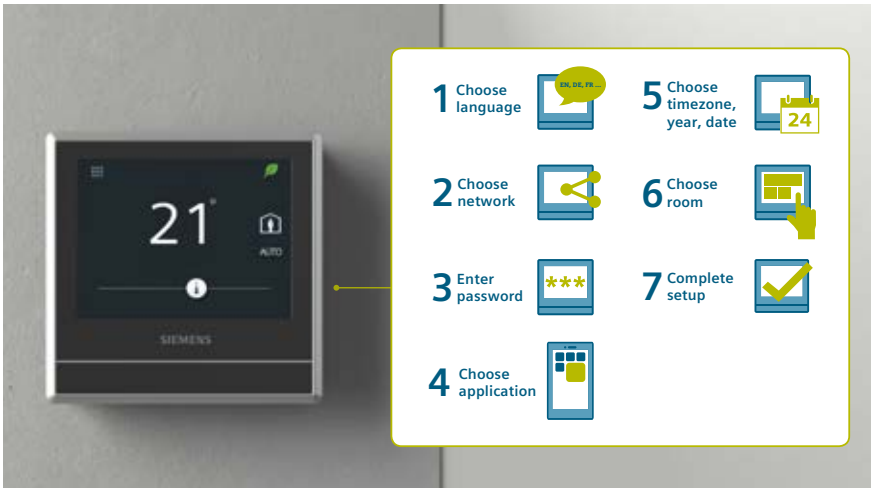

Two sensors detect presence by recognizing if a person is in the room. In this case, the system automatically changes from Economy to Comfort. A light sensor completes its powerful functions. And the thermostat can easily be connected with external sensors and switches for window contact, second room temperature, and outside temperature.

### Self-learning algorithm on board

Once it's installed and the setup done, the Smart Thermostat learns the characteristics of a room in less than one day. The Optimum Start Control defines the ideal moment to start heating in order to have a perfect room climate. The results are convincing: energy and cost savings and an improved indoor climate comfort. As the Smart Thermostat quickly learns and adapts by itself, there is no need for action by the user.

### Proven green technology

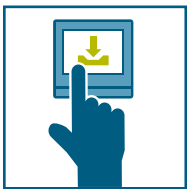

The Smart Thermostat ensures energy-efficient operation by meeting important energy efficiency standards. The integrated Green Leaf feature, a proven technology, helps save energy while it contributes to a perfect room climate. When the Green Leaf turns red, the heating equipment is no longer running in energy-optimized mode. A single tap on the leaf turns it green and ensures energy-optimized operation again.

Navigation wizard for fast and easy commissioning

No Internet connection required during installation

#### Intuitive use and automatic updates

The Smart Thermostat was developed to make handling as easy as possible. This is reflected in the highly intuitive user interface and the display that has been reduced to the essentials. Automatic updates ensure that the Smart Thermostat benefits from the latest features.

#### Fast commissioning with no need for Internet connection

The Smart Thermostat can be directly commissioned at the screen and hardware menu, and thanks to WLAN communication, it can be easily connected to the router without needing additional boxes (gateway). An intelligently designed navigation wizard provides a fast step-by-step guide. Because the Smart Thermostat can be flexibly used for replacement business or in new installations, it can be commissioned before residents move in or rooms are in use. This means that the setup can be easily performed by residents. Therefore, the Smart Thermostat is a very profitable option, especially for multi-family homes and new constructions.

#### Highlights for professionals

- Wizard as step-by-step guide for fast commissioning
- Unique two-step commissioning concept
- No Internet connection required for installation
- Easy and highly intuitive user interface
- Always up to date with free software upgrades for the Smart Thermostat and the app
