Data centers talk – we translate what they say. Handling the vast amount of data that is produced by a data center every day is complex and time consuming. With the Data Center Hub we bring full insights into the live and historical data of your data center, so you can act on what really matters.

**Personalize cockpits**
With the Data Center Hub you have full flexibility to monitor the KPIs that drive your business. Choose your preferred widgets, add them to your personalized cockpit and receive all needed information live at the right level of detail – on all your devices.

**Automate reporting**
In the Data Center Hub, automated reports can be created with data from multiple sources, involving minimal manual work. Simply select the data, desired timeframe, locations, preferred charts and within moments a report is generated.

**Identify opportunities**
Through full transparency and monitoring you understand what your data center tells you every day. The Data Center Hub notifies you about potential anomalies and gives you the possibility to identify a wide range of optimization opportunities.

**Mitigate risks**
Continuously monitoring the essential KPIs in your data center enables you to mitigate risks such as power outages or cooling inefficiencies. The Data Center Hub notifies you 24/7 on any device, so you can proactively act before it is too late.
