Thanks to an internal and external international network and the necessary skills, the three major challenges are met and a successful project completion is ensured.

Individual portfolio depending on the installation site
Siemens, as a globally active company, and the good internal cooperation enables us to quickly provide the necessary products, which are certified on final customer site.

Dealing with a wide variety of certificates, products and documentation
Due to the established competence and experience with systems worldwide, our team of experts can easily install any system necessary for the project, so that it only has to be put into operation on final customer site.

Commissioning and malfunctions on site
An international network of internal colleagues and external partners guarantees competent and complete on-site support at the final location.

Modular, flexible and always tailored to your needs
E-houses are customized, pre-assembled and pre-tested modular power substations. They have proven themselves as an alternative to conventional power distribution solutions. Therefore, they have been installed in large numbers throughout the world in industry and infrastructure, and for network operators.

Fire Safety Application Center makes e-houses safer
To protect against fire hazards, fire and gas detectors and extinguishing systems shall be an integral part of the units shipped. The systems must be adapted according to local regulations and comply with the necessary certificates. The team at the Fire Safety Application Center in Austria has built up the expertise and infrastructure to successfully meet complex customer requirements such as these. This enables us to guarantee international site acceptance tests.
