Sinteso Cloud Apps
Enhance the overview of your fire protection system
Are you looking for a solution that allows you to keep an eye on your building’s fire protection system as well as provide you with fast and reliable responses to fire related incidents? With the Siemens cloud-based solutions, Sinteso Cloud Apps, monitoring your fire safety system has never been easier.

Protecting against fire risks needs special care. That is why every element of protection matters. Once the fundamental elements of fire protection have been addressed, the next step is to feel in command of your fire protection system while having the reassurance that, if anything happens, your service provider is taking care of it.

This is what Sinteso Cloud Apps are there for. They offer you the peace of mind you need to focus on what really matters.

What are the Sinteso Cloud Apps?
Sinteso Cloud Apps consist of two cloud-based solutions:

- Sinteso Portal
- Sinteso Tunnel

Both apps are connected remotely and securely thanks to an encrypted connection to your fire protection system.

Sinteso Portal allows you and your service provider to see what is happening on your fire control panel and get real time data.

Sinteso Tunnel is a one-on-one remote connection that allows your service provider to fix issues immediately and remotely without having to be on site.

How easy is it to install the Sinteso Cloud Apps?
Installing and commissioning Sinteso Cloud Apps is easy and only takes a few hours without any changes to your IT infrastructure.
Peace of mind at your fingertips

Live overview of your fire protection system
You can know what is happening in your fire system any time anywhere. If an incident occurs, Sinteso Cloud Apps provide you with a live status of your fire control panel. Receiving detailed information as to where the incident is located will make troubleshooting more time efficient.

Instant notification of incidents
If an incident happens, you will be notified via SMS or email. You can also configure the system to choose who receives the notification and the category of events triggering a notification.

Quick response to incidents
Your service provider will have the information needed to identify incidents and fix them remotely when possible. Receiving a detailed report of incidents will also allow them to come well prepared on site.

Ensured business continuity
Sinteso Cloud Apps play an important role in ensuring the business continuity of your building. Maintenance work is more efficient and troubleshooting incidents is faster. These benefits contribute to making the activities of your building run smoothly as well as increase the uptime of your system.

How it works
Smart Infrastructure intelligently connects energy systems, buildings and industries to adapt and evolve the way we live and work.

We work together with customers and partners to create an ecosystem that intuitively responds to the needs of people and helps customers to better use resources. It helps our customers to thrive, communities to progress and supports sustainable development.

Creating environments that care.
