

Cold Weather Kits

Description

The Cold Weather Kit is intended for use with air-cooled product manufactured after April of 2010. The kit consists of an automatic thermostatically controlled battery pad warmer and crankcase heater.

When temperatures fall below an acceptable level, the thermostat activates the battery warmer maintaining optimum battery temperature and also activates the crankcase oil heater for the best generator starting. This kit is recommended for generators installed in regions where the temperature regularly falls below 10 degrees.

When installing a cold weather kit, it is required that the oil is replaced with 5W-30 synthetic for better engine start capability.

Catalog number	Description
5948	This kit is intended for use with product utilizing a 410 or 530 cc engine and is retrofittable to older product.
5947	This kit is intended for use with product utilizing a 760, 992 or 999 cc engine and is retrofittable to older product.
