SIEMENS

7PG17 XR105, XR106 and XR107, XR205 and XR206

Interposing Relays

Description

Type XR205 and XR206 are two element versions of the XR105 and XR106 respectively with the same performance. Type XR relays are developments for specific applications from the type AR relay range. They are electro-mechanical relays with a consistent positive action, a long service life and complying with BS142. Type XR105 has no flag indicator, XR106 & XR107 have a hand reset flag. Both types are available with a suppression diode across the coil to reduce the effects of the back emf which occurs on switch-off.

Application

Types XR105/XR106/XR107 are intended for the remote control of switchgear and associated equipment over pilot wires with a maximum resistance of 200 ohms. These relays are designed so that they are not susceptible to certain a.c. voltage levels which may be induced onto the pilots wires.

Technical information

External resistor required for 125Vd.c. operation
Operating range. With zero pilot resistance
78 to 125% of nominal rated voltage

With a maximum pilot loop resistance of 200ohm 92 to 125% of nominal rated voltage.
Burden Typically 3.7W for a relay with 4 normally open contacts.

A.C. Rejection

For a 48Vd.c. rated relay, typically 110V 50Hz a.c.

Operating time

For a relay rated 48Vd.c. with 4 normally open contacts at rated voltage typically 30ms. With 200ohms pilot resistance less than 80ms. Reset time is less than 35ms

Contacts

2 normally open, 4 normally open or 2 normally open and 2 normally closed, self reset on XR105 & XR106.
Hand reset on XR107.

Normal duty, contact ratings

Make and carry continuously

1250VAa.c. or 1250Wd.c. within the limits of 660V and 5A

Make and carry for 3 seconds

7500VAa.c. or 7500Wd.c.

within the limits of 660V and 30A

Break:

1250VAa.c. or 100W (resistive) d.c. or 50W (inductive)

L/R = 0.04, d.c. within the limits of 250V and 5A

Temperature

In service: -10°C to 55 °C

Storage -25 °C to 70°C

Mechanical durability

Vibration, relays comply with BS142, Section 2.1

Category S2.

Shock, relays will withstand a 20G shock or impact on the panel without operating. Operational/mechanical life, relays will withstand in excess of 10,000 operations with the contact rating stated.

Normally closed contact location (Epsilon case terminal numbers)				
	1-3	2-4	5-7	6-8
1 NC		NC		
2 NC	NC	NC		
3 NC	NC	NC		NC
4 NC	NC	NC	NC	NC

7PG17 XR151

Trip Relay Supervision Relay

Description

Type XR relays are developments for specific applications of the type AR relay range. They are electro-mechanical relays with long service life and complying with the appropriate requirements of IEC 255 and BS 142. These relays have a low operating current, specific settings and time delayed drop-off. This latter feature is to keep the relay in the operated condition during temporary reductions in the battery voltage, such as those which occur just prior to a fuse blowing or during a busbar fault when many trip relays operate simultaneously.

Application

Type XR151 relays are designed to allow the supervision of a trip relay operating coil, supply & associated wiring. This application requires relays with low operating current, visual indication and the ability to initiate a remote alarm. Both these relays have mechanical flag indicators which show on de-energisation, either self reset or hand reset.

Low burden & consistent, positive action
Suitable for high burden trip relays (EB2) only.

Exact burden & operating current dependent upon application.

Technical information

Rated voltage V _n	125V
Settings	Pick-up: 70% of V _n Drop-off: not less than 26% of V _n
Reset time	No less than 100ms when supply is switched from 100% to 26% of V _n .

Operating current	Less than 20mA.
Burden	Less than 2.5W
Thermal Withstand	1.15 V _n continuously
Indication	A self or hand reset flag indicator shows when the relay is de-energised.

Contact arrangements

4 contacts in any combination of normally open or normally closed

Contact rating

Make and carry continuously:
1250VA a.c. or 1250Wd.c.
with limits of 660V and 5A

Make and carry for 3 seconds:
7500VA a.c. or 7500Wd.c
with limits of 660V and 30A

Break

1250VA a.c. or 100Wd.c. resistive, or 50W
inductive (L/R = 0.04) d.c. with limits of 250V

Environmental Information

Temperature	IEC 68-2-1 & 2
-Storage -	25°C to +70°C
-Operating -	10°C to +55°C
Humidity	IEC 68-2-3
56 days at 95% RH and 40°C	
Vibration	IEC 255-21-1

The relays meet the requirements of Class 1 for vibration response and endurance

Shock and bump IEC 255-21-2

The relays meet the requirements of IEC 255-21-2 and BS142, sub-section 1.5.2. (1989) with respect to shock and bump testing for class 1 severity

Mechanical life

The relays will withstand in excess of 10,000 operations with the contact rating at a rate of 600 operations per hour

Insulation IEC 255-5

Relays will withstand:

5kV peak, 1.2/50 μ s, 0.5J between all terminals and case earth and between adjacent terminals.

2kV rms 50Hz for 1 minute between all case terminals connected together and the case earth and between independent circuits.

1kV rms 50Hz for 1 minute between normally open contacts.

Typical connections

XR151 SUPERVISION RELAY

7PG17 XR152 and XR153

Supply Supervision Relays

Description

Type XR relays are developments for specific applications of the type AR relay range. They are electro-mechanical relays with long service life and complying with the appropriate requirements of IEC 255 and BS 142. These relays have a low operating current, specific settings and time delayed drop-off. This latter feature is to keep the relay in the operated condition during temporary reductions in the battery voltage, such as those which occur just prior to a fuse blowing or during a busbar fault when many trip relays operate simultaneously. Healthy circuits therefore do not give spurious alarms and the relay effected by the fuse failure provides the alarm and indication necessary for accurate maintenance attention.

Application

Types XR152 and XR153 relays are designed to comply with CEGB and other specification for protection supervision requirements and the monitoring of d.c. voltage supplies. These applications require relays with low operating current, visual indication and the ability to initiate a remote alarm. Both these relays have mechanical flag indicators which show on de-energisation, self reset on the XR152 and hand reset on the XR153.

Low burden

Versatile design, can provide pre-close supervision

Consistent positive action

Technical information

Rated voltage V _n	24V, 30V, 50V, 60V, 125V and 220Vdc
Settings	Pick-up 70% of rated voltage Drop-off not less than 26% of V _n
Reset time	No less than 100ms when supply is switched from 100% to 26% of V _n .
Operating current	10mA nominal. (17mA for 24V & 30V ratings)
Burden	0.4W at 24Vd.c. 1.25W at 125Vd.c
Thermal Withstand	1.15 V _n continuously
Indication	A flag indicator shows when the relay is de-energised XR152 self reset flag XR153 hand reset flag

Contact arrangements

2 or 4 contacts in any combination of normally open and normally closed

Contact rating

Make and carry continuously:
1250VA a.c. or 1250Wd.c.
with limits of 660V and 5A

Make and carry for 3 seconds:
7500VA a.c. or 7500Wd.c
with limits of 660V and 30A

Break

1250VA a.c. or 100Wd.c. resistive, or 50W inductive (L/R = 0.04) d.c. with limits of 250V

Environmental Information

Temperature	IEC 68-2-1 & 2
-Storage -	25°C to +70°C

7PG17 – XR250 to XR351

Trip Circuit Supervision Relays

Description

Type XR relays are developments for specific applications of the type AR relay range. They are electro-mechanical relays with a consistent positive action, a long service life and complying with the appropriate requirements of IEC 255 and BS142. Models XR250/251 have two attracted armature elements, XR350/351 have three. These relays incorporate a time delay on de-energisation to keep the relay in an operated condition during temporary reductions in the battery voltage.

Low burden

Versatile design, can provide pre-close supervision
Consistent positive action

Supervision of the trip circuit breaker is desirable as a means of ensuring the integrity to the trip circuit.

There are differing requirements for monitoring a trip circuit, supervision of the trip with the circuit breaker closed, supervision with the circuit breaker open and closed and pre-closing supervision. These XR relays are designed to meet all of these requirements and in particular the requirements of BEBS S15 schemes H4 and H7.

XR250 and XR251 Circuit breaker closed supervision will initiate an alarm and provide indication with the circuit closed for : Failure of the trip supply, open circuit trip coil, an open circuit in the trip circuit wiring and if the trip coil should fail to respond to a trip command.

XR350 and XR351

Continuous supervision with the circuit breaker in the open and closed positions and in compliance with the scheme requirements of BEBS S15 scheme H7. XR350 and XR351 relays also have a contact for pre-closing supervision, where a circuit breaker is prevented from being closed if trip relays have not been reset. BEBS S15 scheme H7 is applicable to trip circuit voltages of 125Vd.c. and 240Vd.c.

Technical information

Rated voltage V n	30V, 50V, 125V & 220Vdc
Operating range	80% to 120% of Vn
Reset time	400ms when supply is switched from Vn to off

Burden

H7 scheme relay burdens are typically:

Rated voltage	Trip circuit condition		Alarm circuit
	C.B. open	C.B. closed	
50Vd.c	--	--	2W
125Vd.c	1W	2W	4W
240Vd.c	2W	4W	9W

Thermal Withstand 1.15Vn continuous

Indication

A flag indicator shows when the relay is de-energised

Self reset flag XR250 and XR350

Hand reset flag XR251 and XR351

Contact arrangements

Alarm output - 4 contacts in any combination of normally open and normally closed. Pre-closing supervision, XR350 & XR351, 1 normally open contact.

Contact rating

Make and carry continuously:

1250VAa.c. or 1250Wd.c. with limits of 660V and 5A

Make and carry for 3 seconds:

7500VAa.c. or 7500Wd.c with limits of 660V and 30A

Break:

1250VAa.c. or 7500Wd.c. resistive, or 50W

inductive (L/R = 0.04) d.c. with limits of 250V and 5A

Environmental

Temperature	IEC 68-2-1 & 2
Storage	-25°C to +70°C
Operating	-10°C to +55°C
Humidity	IEC 68-2-3 56 days at 95% RH and 40°C
Vibration	IEC 255-21-1

The relays meet the requirements of Class 1 for vibration response and endurance

Shock and bump

IEC 255-21-2

The relays meet the requirements of IEC 255-21-2 and BS142, sub-section 1.5.2. (1989) with respect to shock and bump testing for class 1 severity

Operational/mechanical life

The relays will withstand in excess of 10,000 operations with the contact rating at a rate of 600 operations per hour
Insulation IEC 255-5

Relays will withstand:

5kV peak, 1.2/50µs, 0.5J between all terminals and case earth and between adjacent terminals

2kV rms 50Hz for 1 minute between all case terminals connected together, the case earth and between independent circuits

1kV rms 50Hz for 1 minute between normally open contacts.

Coil and Resistor Data

Voltage d.c.		Coil Resistance Ohms			External Resistor Ohms			
Trip	Alarm	A	B	C	R1	R2	R3	R4
30	30	400	400	450	--	--	100	100
50	50	1572	1572	1572	--	--	350	350
125	125	4800	4800	1572	2000	--	3300	3300
240	240	4800	4800	1572	3300	7000	3300	3300

R1 and R2 are fitted in the 'C' coil circuit.

R3 and R4 are fitted in the 'A' and 'B' coil circuits respectively.
