**Disclaimer of Liability**

Although we have carefully checked the contents of this publication for conformity with the hardware and software described, we cannot guarantee complete conformity since errors cannot be excluded. The information provided in this manual is checked at regular intervals and any corrections that might become necessary are included in the next releases. Any suggestions for improvement are welcome.

Subject to change without prior notice.

Document Label:

# Preface

**This document is applicable to the following product(s):**

- SICAM Protocol Test System

**Purpose of this manual**

This manual describes the interoperability of SICAM Protocol Test System according to IEC 60870-5-101/104 and essentially contains

- Interoperability IEC 60870-5-101/104

**Target Group**

The document you are reading right now is addressed to users, who are in charge of the following tasks:

- Sales engineering and technical clarification
- Conceptual activities, as for example design and configuration

# 1 Introduction

## Contents

1.1	Area of Application .....	8
1.2	General Information.....	8

## 1.1 Area of Application

In this documentation, all definitions are described that are necessary for communication between automation units as per IEC 60870-5-101 and between automation units or automation units and control room process computer systems as per IEC 60870-5-104.

Note: Sequences defined in the standard (e.g. commands, clock synchronization, ...) are supported in the PTS but single telegrams of the sequence needs to be defined in the simulation window and the sequence have to be triggered manually (e.g. send a confirmation after a activation)

## 1.2 General Information

### Syntax:

- Function or ASDU is not used
- Function or ASDU is used as standardized (default)
- R Function or ASDU is used in reverse mode
- B Function or ASDU is used in standard and reverse mode
- ? Function or ASDU is planned, please contact the product management
- Function or ASDU is used in a specific project

~~strike through~~                      the text descriptions of parameters which are not applicable to this companion standard

**Definition:**

Group	Standard and Function
IEC60870-5-101 (Balanced)	<b>IEC 60870-5-101 Controlling-/Controlled Station“Balanced“- “Point-to-Point“</b> Standard protocol elements for communication as per IEC-60870-5-101 with point to point configuration for the link between the SICAM RTUs or SICAM RTUs and outside systems that support these parameters.
IEC60870-5-101 (Unbalanced Master)	<b>IEC 60870-5-101 Controlling-/Controlled Station “Unbalanced Master“</b> Standard protocol elements for communication as per IEC-60870-5-101 with multipoint configuration for the link between the SICAM RTUs or SICAM RTUs and outside systems that support these parameters.
IEC60870-5-101 (Unbalanced Slave)	<b>IEC 60870-5-101 Controlling-/Controlled Station “Unbalanced Slave“</b> Standard protocol elements for communication as per IEC-60870-5-101 with multipoint configuration for the link between the SICAM RTUs or SICAM RTUs and outside systems that support these parameters.
IEC60870-5-104	<b>IEC 60870-5-104 Controlling-/Controlled Station</b> Standard protocol elements for communication as per IEC-60870-5-104 for linking SICAM RTUs or SICAM RTUs and 3 <sup>rd</sup> party systems which support these parameters.

**Note**

With SICAM Protocol Test System all telegrams included in interoperability can be generated with manual message simulation.

SICAM Protocol Test System does actually not support automatic message simulation for defined IEC60870-5-101/-104 sequences.  
e.g. no ACTCON, ACTTERM simulation for commands,...

## 2 IEC 60870-5-101 Interoperability

### Contents

2.1	System or device function.....	13
2.2	Network configuration.....	13
2.3	Physical layer .....	13
2.4	Link layer.....	14
2.5	Application layer.....	15
2.6	Basic application functions.....	21

This companion standard presents sets of parameters and alternatives from which subsets must be selected to implement particular telecontrol systems. Certain parameter values, such as the number of octets in the COMMON ADDRESS of ASDUs represent mutually exclusive alternatives. This means that only one value of the defined parameters is admitted per system. Other parameters, such as the listed set of different process information in command and in monitor direction, allow the specification of the complete set or subsets, as appropriate for given applications. This clause summarizes the parameters of the previous clauses to facilitate a suitable selection for a specific application. If a system is composed of equipment stemming from different manufacturers it is necessary that all partners agree on the selected parameters.

**Note:**

In addition, the full specification of a system may require individual selection of certain parameters for certain parts of the system, such as the individual selection of scaling factors for individually addressable measured values.

The selected parameters should be marked in the white boxes as follows:

- Function or ASDU is not used
- Function or ASDU is used as standardized (default)
- R Function or ASDU is used in reverse mode
- B Function or ASDU is used in standard and reverse mode
  
- ? Function or ASDU is planned, please contact the product management
- Function or ASDU is used in a specific project

The possible selection (blank, X, R, or B) is specified for each specific clause or parameter.

## 2.1 System or device function

(system-specific parameter, indicate the system's or station's function by marking one of the following with 'X')

- System definition  
 Controlling Station (Master)  
 Controlled Station (Slave)

## 2.2 Network configuration

(network-specific parameter, all configurations that are used are to be marked 'X')

- Point to point  
 Multiple point to point  
 Multipoint-partyline  
 Multipoint-star

## 2.3 Physical layer

(network-specific parameter, all interfaces and data rates that are used are to be marked 'X')

### Transmission speed (control direction)

Unbalanced interchange Circuit V.24/V.28 Standard	Unbalanced interchange Circuit V.24/V.28 Recommended if >1200 bit/s	Balanced interchange Circuit *	
<input checked="" type="checkbox"/> 100 bits/s	<input checked="" type="checkbox"/> 2400 bits/s	<input type="checkbox"/> 2400 bits/s	<input type="checkbox"/> 56000 bits/s
<input checked="" type="checkbox"/> 200 bits/s	<input checked="" type="checkbox"/> 4800 bits/s	<input type="checkbox"/> 4800 bits/s	<input type="checkbox"/> 64000 bits/s
<input checked="" type="checkbox"/> 300 bits/s	<input checked="" type="checkbox"/> 9600 bits/s	<input type="checkbox"/> 9600 bits/s	
<input checked="" type="checkbox"/> 600 bits/s	<input checked="" type="checkbox"/> 19200 bits/s	<input type="checkbox"/> 19200 bits/s	
<input checked="" type="checkbox"/> 1200 bits/s	<input checked="" type="checkbox"/> 38400 bits/s	<input type="checkbox"/> 38400 bits/s	

### Transmission speed (monitor direction)

Unbalanced interchange Circuit V.24/V.28 Standard	Unbalanced interchange Circuit V.24/V.28 Recommended if >1200 bit/s	Balanced interchange Circuit *	
<input checked="" type="checkbox"/> 100 bits/s	<input checked="" type="checkbox"/> 2400 bits/s	<input type="checkbox"/> 2400 bits/s	<input type="checkbox"/> 56000 bits/s
<input checked="" type="checkbox"/> 200 bits/s	<input checked="" type="checkbox"/> 4800 bits/s	<input type="checkbox"/> 4800 bits/s	<input type="checkbox"/> 64000 bits/s
<input checked="" type="checkbox"/> 300 bits/s	<input checked="" type="checkbox"/> 9600 bits/s	<input type="checkbox"/> 9600 bits/s	
<input checked="" type="checkbox"/> 600 bits/s	<input checked="" type="checkbox"/> 19200 bits/s	<input type="checkbox"/> 19200 bits/s	
<input checked="" type="checkbox"/> 1200 bits/s	<input checked="" type="checkbox"/> 38400 bits/s	<input type="checkbox"/> 38400 bits/s	

## 2.4 Link layer

(network-specific parameter, all options that are used are to be marked 'X'. Specify the maximum frame length. If a non-standard assignment of class 2 messages is implemented for unbalanced transmission, indicate the Type ID and COT of all messages assigned to class 2.)

Frame format FT 1.2, single character 1 and the fixed time out interval are used exclusively in this companion standard.

### Link transmission procedure

- Balanced transmission  
 Unbalanced transmission

### Address field of the link

- not present (balanced transmission only)  
 1 Octet  
 2 Octets  
 structured  
 unstructured

### Frame length

Maximum length L (number of octets, possible 9-255)

When using an unbalanced link layer, the following ASDU types are returned in class 2 messages (low priority) with the indicated causes of transmission:

The standard assignment of ASDUs to class 2 messages is used as follows:

Type identification	Cause of transmission
9, 11, 13, 21	<1>

A special assignment of ASDUs to class 2 messages is used as follows:

Type identification	Cause of transmission

Note: In response to a class 2 poll, a controlled station may respond with class 1 data when there is no class 2 data available.

## 2.5 Application layer

### Transmission mode for application data

Mode 1 (Least significant octet first), as defined in clause 4.10 of IEC 60870-5-4, is used exclusively in this companion standard.

### Common address of ASDU

(system-specific parameter, all configurations that are used are to be marked „X“)

1 Octet

2 Octets

### Information object address

(system-specific parameter, all configurations that are used are to be marked „X“)

1 Octet

structured

2 Octets

unstructured

3 Octets

### Cause of transmission

(system-specific parameter, all configurations that are used are to be marked „X“)

1 Octet

2 Octets (with originator address \*)

Only originator address not used (=0) is used

## Selection of standard ASDUs

### Process information in monitor direction

(station-specific parameter, mark each Type ID „X“ if it is only used in the standard direction, „R“ if only used in the reverse direction, and „B“ if used in both directions)

B	<1>	:= Single-point information	M_SP_NA_1
B	<2>	:= Single-point information with time tag	M_SP_TA_1
B	<3>	:= Double-point information	M_DP_NA_1
B	<4>	:= Double-point information with time tag	M_DP_TA_1
B	<5>	:= Step position information	M_ST_NA_1
B	<6>	:= Step position information with time tag	M_ST_TA_1
B	<7>	:= Bitstring of 32 bit	M_BO_NA_1
B	<8>	:= Bitstring of 32 bit with time tag	M_BO_TA_1
B	<9>	:= Measured value, normalized value	M_ME_NA_1
B	<10>	:= Measured value, normalized value with time tag	M_ME_TA_1
B	<11>	:= Measured value, scaled value	M_ME_NB_1
B	<12>	:= Measured value, scaled value with time tag	M_ME_TB_1
B	<13>	:= Measured value, short floating point value	M_ME_NC_1
B	<14>	:= Measured value, short floating point value with time tag	M_ME_TC_1
B	<15>	:= Integrated totals	M_IT_NA_1
B	<16>	:= Integrated totals with time tag	M_IT_TA_1
B	<17>	:= Event of protection equipment with time tag	M_EP_TA_1
B	<18>	:= Packed start events of protection equipment with time tag	M_EP_TB_1
B	<19>	:= Packed output circuit information of protection equipment with time tag	M_EP_TC_1
B	<20>	:= Packed single-point information with status change detection	M_PS_NA_1
B	<21>	:= Measured value, normalized value without quality descriptor	M_ME_ND_1
B	<30>	:= Single-point information with time tag CP56Time2a	M_SP_TB_1
B	<31>	:= Double-point information with time tag CP56Time2a	M_DP_TB_1
B	<32>	:= Step position information with time tag CP56Time2a	M_ST_TB_1
B	<33>	:= Bitstring of 32 bit with time tag CP56Time2a	M_BO_TB_1
B	<34>	:= Measured value, normalized value with time tag CP56Time2a	M_ME_TD_1
B	<35>	:= Measured value, scaled value with time tag CP56Time2a	M_ME_TE_1
B	<36>	:= Measured value, short floating point value with time tag CP56Time2a	M_ME_TF_1
B	<37>	:= Integrated totals with time tag CP56Time2a	M_IT_TB_1
B	<38>	:= Event of protection equipment with time tag CP56Time2a	M_EP_TD_1
B	<39>	:= Packed start events of protection equipment with time tag CP56Time2a	M_EP_TE_1
B	<40>	:= Packed output circuit information of protection equipment with time tag CP56Time2a	M_EP_TF_1

Either the ASDUs of the set <2>, <4>, <6>, <8>, <10>, <12>, <14>, <16>, <17>, <18>, <19> or of the set <30> - <40> are used.

**Process information in control direction**

(station-specific parameter, mark each Type ID „X“ if it is only used in the standard direction, „R“ if only used in the reverse direction, and „B“ if used in both directions)

<span style="border: 1px solid black; padding: 0 2px;">B</span> <45>	:= Single command	C_SC_NA_1
<span style="border: 1px solid black; padding: 0 2px;">B</span> <46>	:= Double command	C_DC_NA_1
<span style="border: 1px solid black; padding: 0 2px;">B</span> <47>	:= Regulating step command	C_RC_NA_1
<span style="border: 1px solid black; padding: 0 2px;">B</span> <48>	:= Set point command, normalized value	C_SE_NA_1
<span style="border: 1px solid black; padding: 0 2px;">B</span> <49>	:= Set point command, scaled value	C_SE_NB_1
<span style="border: 1px solid black; padding: 0 2px;">B</span> <50>	:= Set point command, short floating point	C_SE_NC_1
<span style="border: 1px solid black; padding: 0 2px;">B</span> <51>	:= Bitstring of 32 bit	C_BO_NA_1
<span style="border: 1px solid black; padding: 0 2px;">B</span> <58>	:= Single command with time tag CP56Time2a	C_SC_TA_1
<span style="border: 1px solid black; padding: 0 2px;">B</span> <59>	:= Double command with time tag CP56Time2a	C_DC_TA_1
<span style="border: 1px solid black; padding: 0 2px;">B</span> <60>	:= Regulating step command with time tag CP56Time2a	C_RC_TA_1
<span style="border: 1px solid black; padding: 0 2px;">B</span> <61>	:= Set point command, normalized value with time tag CP56Time2a	C_SE_TA_1
<span style="border: 1px solid black; padding: 0 2px;">B</span> <62>	:= Set point command, scaled value with time tag CP56Time2a	C_SE_TB_1
<span style="border: 1px solid black; padding: 0 2px;">B</span> <63>	:= Set point command, short floating point with time tag CP56Time2a	C_SE_TC_1
<span style="border: 1px solid black; padding: 0 2px;">B</span> <64>	:= Bitstring of 32 bit with time tag CP56Time2a	C_BO_TA_1

Either the ASDUs of the set <45> - <51> or of the set <58> - <64> are used.

**System information in monitor direction**

(station-specific parameter, mark „X“ if used)

<span style="border: 1px solid black; padding: 0 2px;">B*</span> <70>	:= End of initialization	M_EI_NA_1
---	--------------------------	-----------

**System information in control direction**

(station-specific parameter, mark each Type ID „X“ if it is only used in the standard direction, „R“ if only used in the reverse direction, and „B“ if used in both directions)

<span style="border: 1px solid black; padding: 0 2px;">B*</span> <100>	:= Interrogation command	C_IC_NA_1
<span style="border: 1px solid black; padding: 0 2px;">B*</span> <101>	:= Counter interrogation command	C_CI_NA_1
<span style="border: 1px solid black; padding: 0 2px;">B*</span> <102>	:= Read command	C_RD_NA_1
<span style="border: 1px solid black; padding: 0 2px;">B*</span> <103>	:= Clock synchronization command	C_CS_NA_1
<span style="border: 1px solid black; padding: 0 2px;">B*</span> <104>	:= Test command	C_TS_NA_1
<span style="border: 1px solid black; padding: 0 2px;">B*</span> <105>	:= Reset process command	C_RP_NA_1
<span style="border: 1px solid black; padding: 0 2px;">B*</span> <106>	:= Delay acquisition command	C_CD_NA_1

\*) PTS can send/receive system information but there is no higher level function implemented (e.g. Clock synchronization command don't set the PC clock)

**Parameter in control direction**

(station-specific parameter, mark each Type ID „X“ if it is only used in the standard direction, „R“ if only used in the reverse direction, and „B“ if used in both directions)

<input type="checkbox"/>	<110>	:= Parameter of measured value, normalized value	P_ME_NA_1
<input type="checkbox"/>	<111>	:= Parameter of measured value, scaled value	P_ME_NB_1
<input type="checkbox"/>	<112>	:= Parameter of measured value, short floating point value	P_ME_NC_1
<input type="checkbox"/>	<113>	:= Parameter activation	P_AC_NA_1

**File transfer**

(station-specific parameter, mark each Type ID „X“ if it is only used in the standard direction, „R“ if only used in the reverse direction, and „B“ if used in both directions)

<input type="checkbox"/>	B	<120>	:= File ready	F_FR_NA_1
<input type="checkbox"/>	B	<121>	:= Section ready	F_SR_NA_1
<input type="checkbox"/>	B	<122>	:= Call directory, select file, call file, call section	F_SC_NA_1
<input type="checkbox"/>	B	<123>	:= Last section, last segment	F_LS_NA_1
<input type="checkbox"/>	B	<124>	:= Ack file, ack section	F_AF_NA_1
<input type="checkbox"/>	B	<125>	:= Segment	F_SG_NA_1
<input type="checkbox"/>	X	<126>	:= Directory {blank or X, only available in monitor (standard direction)}	F_DR_TA_1

### Type identifier and Cause of Transmission Assignments (station-specific parameter)

Shaded boxes are not required.

Black boxes are not permitted in this companion standard

Blank = Function or ASDU is not used.

Mark Type Identification/Cause of transmission combinations:

'X' if only used in the standard direction

'R' if only used in the reverse direction

'B' if used in both directions benutzt

'B' implemented, but not within the standard

Type Identification		Cause of transmission																		
		1	2	3	4	5	6	7	8	9	10	11	12	13	20 to 36	37 to 41	44	45	46	47

Semantics of cause of transmission:

<0>	:=	not used
<1>	:=	periodic, cyclic (optional)
<2>	:=	background scan (optional)
<3>	:=	spontaneous
<4>	:=	initialized
<5>	:=	request or requested
<6>	:=	activation
<7>	:=	activation confirmation
<8>	:=	deactivation
<9>	:=	deactivation confirmation
<10>	:=	activation termination
<11>	:=	return information caused by a remote command
<12>	:=	return information caused by a local command
<13>	:=	file transfer
<14..19>	:=	not used
<20>	:=	interrogated by station interrogation
<21..36>	:=	interrogated by interrogation of the group 1..16
<37>	:=	requested by general counter request
<38..41>	:=	requested by counter interrogation of the group 1..4
<42, 43>	:=	not used
<44>	:=	unknown type identification
<45>	:=	unknown cause of transmission
<46>	:=	unknown common address of ASDU
<47>	:=	unknown information object address
<48, 63>	:=	not used

## 2.6 Basic application functions

### Station initialization

(station-specific parameter, mark „X“ if function is used)

Remote initialization

### Cyclic data transmission

(station-specific parameter, mark „X“ if function only used in standard direction, „R“ if only used in the reverse direction, and „B“ if used in both directions)

Cyclic data transmission

### Read procedure

(station-specific parameter, mark „X“ if function only used in standard direction, „R“ if only used in the reverse direction, and „B“ if used in both directions)

Read procedure

### Spontaneous transmission

(station-specific parameter, mark „X“ if function only used in standard direction, „R“ if only used in the reverse direction, and „B“ if used in both directions)

Spontaneous transmission

Note: No spontaneous transmission (blank field) is not supported

### Double transmission of information objects with cause of transmission spontaneous

(station-specific parameter, mark each information type 'X' where both a Type ID without time and corresponding Type ID with time are issued in response to a single spontaneous change of a monitored object)

The following type identifications may be transmitted in succession caused by a single status change of an information object. The particular information object addresses for which double transmission is enabled are defined in a project-specific list.

- Single-point information M\_SP\_NA\_1, M\_SP\_TA\_1, M\_SP\_TB\_1 and M\_PS\_NA\_1
- Double-point information M\_DP\_NA\_1, M\_DP\_TA\_1 and M\_DP\_TB\_1
- Step position information M\_ST\_NA\_1, M\_ST\_TA\_1 and M\_ST\_TB\_1
- Bitstring of 32 bit M\_BO\_NA\_1, M\_BO\_TA\_1 and M\_BO\_TB\_1 (if defined for a specific project)
- Measured value, normalized value M\_ME\_NA\_1, M\_ME\_TA\_1, M\_ME\_ND\_1 and M\_ME\_TD\_1
- Measured value, scaled value M\_ME\_NB\_1, M\_ME\_TB\_1 and M\_ME\_TE\_1
- Measured value, short floating point value M\_ME\_NC\_1, M\_ME\_TC\_1 and M\_ME\_TF\_1

**Station interrogation**

(station-specific parameter, mark „X“ if function only used in standard direction, „R“ if only used in the reverse direction, and „B“ if used in both directions)

<input type="checkbox"/> B	global		
<input type="checkbox"/> B	group 1	<input type="checkbox"/> B	group 7
<input type="checkbox"/> B	group 2	<input type="checkbox"/> B	group 8
<input type="checkbox"/> B	group 3	<input type="checkbox"/> B	group 9
<input type="checkbox"/> B	group 4	<input type="checkbox"/> B	group 10
<input type="checkbox"/> B	group 5	<input type="checkbox"/> B	group 11
<input type="checkbox"/> B	group 6	<input type="checkbox"/> B	group 12
		<input type="checkbox"/> B	group 13
		<input type="checkbox"/> B	group 14
		<input type="checkbox"/> B	group 15
		<input type="checkbox"/> B	group 16

Information Object Addresses assigned to each group must be shown in a separate table.

**Clock synchronization**

(station-specific parameter, mark „X“ if function only used in standard direction, „R“ if only used in the reverse direction, and „B“ if used in both directions)

<input type="checkbox"/> B	Clock synchronization
<input type="checkbox"/> B	Day of week used
<input type="checkbox"/>	RES1, GEN (time tag substituted/ not substituted) used
<input type="checkbox"/> B	SU-bit (summertime) used

**Command transmission**

(object-specific parameter, mark „X“ if function only used in standard direction, „R“ if only used in the reverse direction, and „B“ if used in both directions)

<input type="checkbox"/> B	Direct command transmission
<input type="checkbox"/> B	Direct set point command transmission
<input type="checkbox"/> B	Select and execute command
<input type="checkbox"/> B	Select and execute set point command
<input type="checkbox"/> B	C_SE ACTTERM used
<input type="checkbox"/> B	No additional definition
<input type="checkbox"/> B	Short pulse duration (duration determined by a system parameter in the outstation)
<input type="checkbox"/> B	Long pulse duration (duration determined by a system parameter in the outstation)
<input type="checkbox"/> B	Persistent output

**Transmission of integrated totals**

(station- or object-specific parameter, mark „X“ if function only used in standard direction, „R“ if only used in the reverse direction, and „B“ if used in both directions)

- B Mode A: Local freeze with spontaneous transmission
- B Mode B: Local freeze with counter interrogation
- B Mode C: Freeze and transmit by counter interrogation commands
- B Mode D: Freeze by counter interrogation command, frozen values reported spontaneously

- B Counter read
- B Counter freeze without reset
- B Counter freeze with reset
- B Counter reset

- B General request counter
- B Request counter group 1
- B Request counter group 2
- B Request counter group 3
- B Request counter group 4

**Parameter loading**

(object-specific parameter, mark „X“ if function only used in standard direction, „R“ if only used in the reverse direction, and „B“ if used in both directions)

- Threshold value
- Smoothing factor
- Low limit for transmission of measured value
- High limit for transmission of measured value

**Parameter activation**

(object-specific parameter, mark „X“ if function only used in standard direction, „R“ if only used in the reverse direction, and „B“ if used in both directions)

act/deact of persistent cyclic or periodic transmission of the addressed object

**Test procedure**

(station-specific parameter, mark „X“ if function only used in standard direction, „R“ if only used in the reverse direction, and „B“ if used in both directions)

B Test procedure

**File transfer**

(station-specific parameter, mark each used function „X“)

## File transfer in monitor direction

- B\* Transparent file
- B\* Transmission of disturbance data of protection equipment
- B\* Transmission of sequences of events
- B\* Transmission of sequences of recorded analog values

## File transfer in control direction

Transparent file

B\* ... Any file can be received/transmitted that can be read/written to the file system

**Background scan**

(station-specific parameter, mark „X“ if function only used in standard direction, „R“ if only used in the reverse direction, and „B“ if used in both directions)

B Background scan

Note: used for data which are transmitted caused by a self-initiated general interrogation

**Acquisition of transmission delay**

(station-specific parameter, mark „X“ if function only used in standard direction, „R“ if only used in the reverse direction, and „B“ if used in both directions)

B Acquisition of transmission delay

# 3 IEC 60870-5-104 Interoperability

## Contents

3.1	System or device function.....	27
3.2	Network configuration.....	27
3.3	Physical layer .....	28
3.4	Link layer.....	29
3.5	Application layer.....	30
3.6	Basic application functions.....	37

This companion standard presents sets of parameters and alternatives from which subsets must be selected to implement particular telecontrol systems. Certain parameter values, such as the choice of "structured" or "unstructured" fields of the INFORMATION OBJECT ADDRESS of ASDUs represent mutually exclusive alternatives. This means that only one value of the defined parameters is admitted per system. Other parameters, such as the listed set of different process information in command and in monitor direction allow the specification of the complete set or subsets, as appropriate for given applications. This clause summarizes the parameters of the previous clauses to facilitate a suitable selection for a specific application. If a system is composed of equipment stemming from different manufacturers it is necessary that all partners agree on the selected parameters.

The interoperability list is defined as in IEC 60870-5-101 and extended with parameters used in this standard. The text descriptions of parameters which are not applicable to this companion standard are strike-through (corresponding check box is marked black).

**Note:**

In addition, the full specification of a system may require individual selection of certain parameters for certain parts of the system, such as the individual selection of scaling factors for individually addressable measured values.

The selected parameters should be marked in the white boxes as follows:

- Function or ASDU is not used
- Function or ASDU is used as standardized (default)
- Function or ASDU is used in reverse mode
- Function or ASDU is used in standard and reverse mode
  
- Function or ASDU is planned, please contact the product management
- Function or ASDU is used in a specific project

The possible selection (blank, X, R, or B) is specified for each specific clause or parameter.

A black check box indicates that the option cannot be selected in this companion standard.

### 3.1 System or device function

(system-specific parameter, indicate the system's or station's function by marking one of the following with 'X')

- System definition
- Controlling Station (Master)
- Controlled Station (Slave)

### 3.2 Network configuration

(network-specific parameter, all configurations that are used are to be marked 'X')

- Point to point
- Multiple point to point
- Multipoint partyline
- Multipoint star

### 3.3 Physical layer

(network-specific parameter, all interfaces and data rates that are used are to be marked 'X')

#### Transmission speed (control direction)

Unbalanced interchange Circuit V.24/V.28 Standard	Unbalanced interchange Circuit V.24/V.28 Recommended if >1200 bit/s	Balanced interchange Circuit X.24/X.27	
■ 100 bits/s	■ 2400 bits/s	■ 2400 bits/s	■ 56000 bits/s
■ 200 bits/s	■ 4800 bits/s	■ 4800 bits/s	■ 64000 bits/s
■ 300 bits/s	■ 9600 bits/s	■ 9600 bits/s	
■ 600 bits/s	■ 19200 bits/s	■ 19200 bits/s	
■ 1200 bits/s	■ 38400 bits/s	■ 38400 bits/s	

#### Transmission speed (monitor direction)

Unbalanced interchange Circuit V.24/V.28 Standard	Unbalanced interchange Circuit V.24/V.28 Recommended if >1200 bit/s	Balanced interchange Circuit X.24/X.27	
■ 100 bits/s	■ 2400 bits/s	■ 2400 bits/s	■ 56000 bits/s
■ 200 bits/s	■ 4800 bits/s	■ 4800 bits/s	■ 64000 bits/s
■ 300 bits/s	■ 9600 bits/s	■ 9600 bits/s	
■ 600 bits/s	■ 19200 bits/s	■ 19200 bits/s	
■ 1200 bits/s	■ 38400 bits/s	■ 38400 bits/s	

## 3.4 Link layer

(network-specific parameter, all options that are used are to be marked 'X'. Specify the maximum frame length. If a non-standard assignment of class 2 messages is implemented for unbalanced transmission, indicate the Type ID and COT of all messages assigned to class 2.)

Frame format FT 1.2, single character 1 and the fixed time out interval are used exclusively in this companion standard.

### Link transmission procedure

- Balanced transmission
- Unbalanced transmission

### Address field of the link

- not present (balanced transmission only)
- 1-Octet
- 2-Octets
- structured
- unstructured

### Frame length

- Maximum length L (number of octets, possible 0-255)

When using an unbalanced link layer, the following ASDU types are returned in class 2 messages (low priority) with the indicated causes of transmission:

- The standard assignment of ASDUs to class 2 messages is used as follows:

Type identification	Cause of transmission
9, 11, 13, 21	<1>

- A special assignment of ASDUs to class 2 messages is used as follows:

Type identification	Cause of transmission

Note: In response to a class 2 poll, a controlled station may respond with class 1 data when there is no class 2 data available.

## 3.5 Application layer

### Transmission mode for application data

Mode 1 (Least significant octet first), as defined in clause 4.10 of IEC 60870-5-4, is used exclusively in this companion standard.

### Common address of ASDU

(system-specific parameter, all configurations that are used are to be marked „X“)

1-Octet  2 Octets

### Information object address

(system-specific parameter, all configurations that are used are to be marked „X“)

1-Octet  structured  
 2-Octets  unstructured  
 3 Octets

### Cause of transmission

(system-specific parameter, all configurations that are used are to be marked „X“)

1-Octet  2 Octets (with originator address \*)

\*) ... Only originator address „not used“ (=0) is used

### Length of APDU

(system-specific parameter, specify the maximum length of the APDU per system)

The maximum length of the APDU is 253 (default). The maximum length may be reduced per system.

253 Maximum length of APDU per system

## Selection of standard ASDUs

### Process information in monitor direction

(station-specific parameter, mark each Type ID „X“ if it is only used in the standard direction, „R“ if only used in the reverse direction, and „B“ if used in both directions)

B	<1>	:= Single-point information	M_SP_NA_1

### Type identifier and Cause of Transmission Assignments (station-specific parameter)

Shaded boxes are not required.

Black boxes are not permitted in this companion standard

Blank = Function or ASDU is not used.

Mark Type Identification/Cause of transmission combinations:

'X' if only used in the standard direction

'R' if only used in the reverse direction

'B' if used in both directions

Type Identification		Cause of transmission																		
		1	2	3	4	5	6	7	8	9	10	11	12	13	20 to 36	37 to 41	44	45	46	47

## 3.6 Basic application functions

### Station initialization

(station-specific parameter, mark „X“ if function is used)

Remote initialization

### Cyclic data transmission

(station-specific parameter, mark „X“ if function only used in standard direction, „R“ if only used in the reverse direction, and „B“ if used in both directions)

Cyclic data transmission

### Read procedure

(station-specific parameter, mark „X“ if function only used in standard direction, „R“ if only used in the reverse direction, and „B“ if used in both directions)

Read procedure

### Spontaneous transmission

(station-specific parameter, mark „X“ if function only used in standard direction, „R“ if only used in the reverse direction, and „B“ if used in both directions)

Spontaneous transmission

Note: No spontaneous transmission (blank field) is not supported

### Double transmission of information objects with cause of transmission spontaneous

(station-specific parameter, mark each information type 'X' where both a Type ID without time and corresponding Type ID with time are issued in response to a single spontaneous change of a monitored object)

The following type identifications may be transmitted in succession caused by a single status change of an information object. The particular information object addresses for which double transmission is enabled are defined in a project-specific list.

- Single-point information M\_SP\_NA\_1, M\_SP\_TA\_1, M\_SP\_TB\_1 and M\_PS\_NA\_1
- Double-point information M\_DP\_NA\_1, M\_DP\_TA\_1 and M\_DP\_TB\_1
- Step position information M\_ST\_NA\_1, M\_ST\_TA\_1 and M\_ST\_TB\_1
- Bitstring of 32 bit M\_BO\_NA\_1, M\_BO\_TA\_1 and M\_BO\_TB\_1 (if defined for a specific project)
- Measured value, normalized value M\_ME\_NA\_1, M\_ME\_TA\_1, M\_ME\_ND\_1 and M\_ME\_TD\_1
- Measured value, scaled value M\_ME\_NB\_1, M\_ME\_TB\_1 and M\_ME\_TE\_1
- Measured value, short floating point value M\_ME\_NC\_1, M\_ME\_TC\_1 and M\_ME\_TF\_1

**Station interrogation**

(station-specific parameter, mark „X“ if function only used in standard direction, „R“ if only used in the reverse direction, and „B“ if used in both directions)

<input type="checkbox"/> B	global		
<input type="checkbox"/> B	group 1	<input type="checkbox"/> B	group 7
<input type="checkbox"/> B	group 2	<input type="checkbox"/> B	group 8
<input type="checkbox"/> B	group 3	<input type="checkbox"/> B	group 9
<input type="checkbox"/> B	group 4	<input type="checkbox"/> B	group 10
<input type="checkbox"/> B	group 5	<input type="checkbox"/> B	group 11
<input type="checkbox"/> B	group 6	<input type="checkbox"/> B	group 12
		<input type="checkbox"/> B	group 13
		<input type="checkbox"/> B	group 14
		<input type="checkbox"/> B	group 15
		<input type="checkbox"/> B	group 16

Information Object Addresses assigned to each group must be shown in a separate table.

**Clock synchronization**

(station-specific parameter, mark „X“ if function only used in standard direction, „R“ if only used in the reverse direction, and „B“ if used in both directions)

B Clock synchronization

- B Day of week used
- RES1, GEN (time tag substituted/ not substituted) used
- B SU-bit (summertime) used

**Command transmission**

(object-specific parameter, mark „X“ if function only used in standard direction, „R“ if only used in the reverse direction, and „B“ if used in both directions)

- B Direct command transmission
- B Direct set point command transmission
- B Select and execute command
- B Select and execute set point command
- B C\_SE ACTTERM used

- B No additional definition
- B Short pulse duration (duration determined by a system parameter in the outstation)
- B Long pulse duration (duration determined by a system parameter in the outstation)
- B Persistent output

- Supervision of maximum delay in command direction of commands and set point commands
- 0-65535s Maximum allowable delay of commands and set point commands

**Transmission of integrated totals**

(station- or object-specific parameter, mark „X“ if function only used in standard direction, „R“ if only used in the reverse direction, and „B“ if used in both directions)

- B Mode A: Local freeze with spontaneous transmission
- B Mode B: Local freeze with counter interrogation
- B Mode C: Freeze and transmit by counter interrogation commands
- B Mode D: Freeze by counter interrogation command, frozen values reported spontaneously

- B Counter read
- B Counter freeze without reset
- B Counter freeze with reset
- B Counter reset

- B General request counter
- B Request counter group 1
- B Request counter group 2
- B Request counter group 3
- B Request counter group 4

**Parameter loading**

(object-specific parameter, mark „X“ if function only used in standard direction, „R“ if only used in the reverse direction, and „B“ if used in both directions)

- Threshold value
- Smoothing factor
- Low limit for transmission of measured value
- High limit for transmission of measured value

**Parameter activation**

(object-specific parameter, mark „X“ if function only used in standard direction, „R“ if only used in the reverse direction, and „B“ if used in both directions)

act/deact of persistent cyclic or periodic transmission of the addressed object

**Test procedure**

(station-specific parameter, mark „X“ if function only used in standard direction, „R“ if only used in the reverse direction, and „B“ if used in both directions)

B Test procedure

**File transfer**

(station-specific parameter, mark each used function „X“)

## File transfer in monitor direction

- B\* Transparent file
- B\* Transmission of disturbance data of protection equipment
- B\* Transmission of sequences of events
- B\* Transmission of sequences of recorded analog values

## File transfer in control direction

Transparent file

B\* ... Any file can be received/transmitted that can be read/written to the file system

**Background scan**

(station-specific parameter, mark „X“ if function only used in standard direction, „R“ if only used in the reverse direction, and „B“ if used in both directions)

B Background scan

Note: used for data which are transmitted caused by a self-initiated general interrogation

**Acquisition of transmission delay**

(station-specific parameter, mark „X“ if function only used in standard direction, „R“ if only used in the reverse direction, and „B“ if used in both directions)

Acquisition of transmission delay

**Definition of time outs**

Parameter	Default Value	Remarks	Selected value
t0	30 s	Time-out of connection establishment	
t1	15 s	Time-out of send or test APDUs	
t2	10 s	Time-out for acknowledges in case of no data messages $t2 < t1$	
t3	20 s	Time-out for sending test frames in case of a long idle state $t3 > t1$	

Maximum range of values t0-t2: 1 to 255 s, accuracy 1 s  
 Maximum range of values t3: 1 to 172800 s (48h), accuracy 1 s

**Maximum numbers of outstanding I format frames k and latest acknowledge**

Parameter	Default Value	Remarks	Selected value
k	12 APDUs	Maximum difference receive sequence number to send state variable	
w	8 APDU's	Latest acknowledge after receiving w I-format APDUs	

Maximum range of value k: 1 to 128 APDUs, accuracy 1 APDU

Maximum range of value w: 1 to 128 APDUs, accuracy 1 APDU (Recommendation: w should not exceed 2/3 of k)

**Portnumber**

Parameter	Value	Remarks	
Portnumber	2404	In all cases	

**Redundant Connections**

4 Number N connections used in redundancy group

**RFC 2200 suite**

RFC 2200 is an official Internet Standard which describes the state of standardization of protocols used in the Internet as determined by the Internet Architecture Board (IAB). It offers a broad spectrum of actual standards used in the Internet. The suitable selection of documents from RFC 2200 defined in this standard for given projects has to be chosen by the user of this standard.

- Ethernet 802.3
- Serial X.21 interface
- Other selection from RFC 2200

List of valid documents from RFC 2200

1. ....
2. ....
3. ....
4. ....
5. ....
6. ....
7. etc.
