

VERIFICATION REPORT

IEC 61850 Edition 2 server conformance test of SICAM AK3

Siemens AG

Report no.: 16-2287

Date: 2016-09-16

Report title:	IEC 61850 Edition 2 server conformance test of SICAM AK3	DNV GL - Energy Energy Advisory
Customer:	Siemens AG, Humboldtstr. 59 90459 Nuremberg, Germany	Utrechtseweg 310-B50 6812 AR ARNHEM The Netherlands
Contact person:	Johann Hahn	
Date of issue:	2016-09-16	
Project No.:	84000072	Tel.: +31 26 356 9111
Organisation unit:	OPE/INC	Registered Arnhem 09080262
Report No.:	16-2287	

Task and objective:

Does the protocol implementation of the DUT, conform to the IEC 61850 standard and the PICS, MICS, PIXIT and ICD specifications as configured with SCD?

Prepared by:

Fernando Lobo
Test Engineer

Verified by:

Richard Schimmel
Verification Manager

Approved by:

Pierfrancesco Cioci
Head of Section INC/PCTC

- Unrestricted distribution (internal and external)
- Unrestricted distribution within DNV GL
- Limited distribution within DNV GL after 3 years
- No distribution (confidential)
- Secret

Reference to part of this verification report which may lead to misinterpretation is not permissible. The Rules and regulations for an Attestation of Conformity or a Certificate based on testing of communication interfaces performed by DNV GL, June 2014 is applicable to this verification report.

<i>EQUIPMENT SIMULATOR</i>	OPM II Object-oriented process data manager
<i>TIME MASTER</i>	KEMA SNTP server

1.2 Background

The *TEST FACILITY*'s assignment was to answer the following question:

"Does the protocol implementation of the DUT conform to the Edition 2 of the IEC 61850 standard and the PICS, MICS, PIXIT and ICD specifications as configured with SCD?"

To answer this question, *TEST FACILITY* has performed a **conformance test** of the IEC 61850 implementation in the *DUT*. This test has been performed according procedures and conditions set forth in IEC 61850 part 10 and UCAIUG Quality Assurance Program.

TEST FACILITY is accredited/recognized by the UCAIUG to perform formal conformance tests and issue the Level A UCAIUG certificate.

1.3 Purpose of this document

The purpose of this document is to describe the conformance test procedure and results of the *TEST SESSION* concerning the IEC 61850-8-1 server implementation in the *DUT*.

The described procedures and test results are the basis for the DNV GL Attestation of Conformity and the UCAIug Level A certificate.

1.4 Contents of this document

Chapter 2 shows the list of relevant normative and other references, used to provide input for the conformance test.

Chapter 3 describes the various relevant components for the conformance test and their configuration as used in the conformance test, including the DUT. This chapter also gives an overview and introduction to the various test groups that together constitute the conformance test.

Chapter 4 and 5 give an overview and summary of the test results, the conclusion(s) and recommendations.

Annex A specifies the detailed test procedures and their outcome.

3 THE CONFORMANCE TEST

3.1 Components in the test environment

The test environment consists of the following components:

- DUT
- CLIENT SIMULATOR
- ANALYSER
- EQUIPMENT SIMULATOR
- Ethernet switch
- Time master

Figure 3.1 The server test environment

3.2 Overview of the test suite

The server test cases are structured as follows:

- Documentation and version control (IEC 61850-4)
- Configuration file (IEC 61850-6)
- Data model (IEC 61850-7-3 and IEC 61850-7-4)
- Mapping of ACSI models and services (IEC 61850-7-2 and IEC 61850-8-1)
 - Application association
 - Server & Logical Device & Logical Node & Data
 - Data set
 - Service tracking
 - Substitution
 - Setting group
 - Reporting
 - Logging
 - Generic object oriented substation events

- 
- Control
 - Time and time synchronization
 - File transfer.

The *PICS* is used to select the applicable test procedures to be included in the test.

4 TEST RESULTS

Tables 4.1 and 4.2 in this Chapter give an overview of the conformance test results. References shown in the table columns refer to the individual test procedures in Annex A. The Mandatory column indicates the mandatory test cases and the Conditional column indicates the same for the conditional test cases. The Inconclusive column indicates those test cases that did not pass nor fail.

Table 4.1 Overview of applicable test cases passed for DUT

Conformance Block	Mandatory	Conditional
1: Basic Exchange	sAss1, sAss2, sAss3, sAssN2, sAssN3, sAssN4, sAssN5, sSrv1, sSrv2, sSrv3, sSrv4, sSrv5, sSrvN1abcd, sSrvN4	sSrv6, sSrv8, sSrv9, sSrv10, sSrv12, sSrvN1e, sSrvN1f, sSrvN3
2: Data Sets	sDs1, sDs10a, sDsN1ae	sDs15
4: Setting Group Selection	sSg1, sSg3, sSgN1	
5: Unbuffered Reporting	sRp1, sRp2, sRp3, sRp4, sRp5, sRp9, sRp14, sRp15, sRpN1, sRpN2, sRpN3, sRpN4, sRpN8	sRp11, sRp12, sRpN5
6: Buffered Reporting	sBr1, sBr2, sBr3, sBr4, sBr5, sBr9, sBr14, sBr15, sBr20, sBr21, sBr22, sBr25, sBr26, sBr27, sBr28, sBrN1, sBrN2, sBrN3, sBrN4, sBrN5, sBrN8	sBr11, sBr12
12a: Direct control	sCtl5, sCtl10, sDOes1, sDOes2	
12c: Enhanced Direct Control	sCtl5, sCtl10, sDOes1, sDOes2	sCtl14
12d: Enhanced SBO Control	sCtl5, sCtl8, sCtl9, sCtl10, sCtl11, sCtl25, sSBOes1, sSBOes2, sSBOes6, sSBOes8	sCtl6, sCtl26
13: Time sync	sTm1, sTm2, sTmN1	

Table 4.2 Overview of applicable test cases failed, inconclusive or comments for DUT

Conformance Block	Inconclusive	Failed	Comment
1: Basic Exchange			sAss3, sAssN2, sAssN3, sSrv6, sSrv9, sSrv10, sSrv12, sSrvN3
2: Data Sets			sDs10a, sDsN1ae
5: Unbuffered Reporting			sRp4, sRpN5
6: Buffered Reporting			sBr4, sBr26
12a: Direct control			sCtl5
12c: Enhanced Direct Control			sCtl5, sCtl10, sDOes1, sDOes2
12d: Enhanced SBO Control			sCtl5, sCtl10, sSBOes1, sSBOes2, SBOes6
13: Time sync			sTm2

5 CONCLUSIONS AND RECOMMENDATIONS

Based on the test results described in this verification report, *TEST FACILITY* declares the tested IEC 61850 Edition 2 implementation in the *DUT* has **not been shown to be non-conforming** to IEC 61850 Edition 2 part 6, 7-1, 7-2, 7-3, 7-4 and 8-1 as specified in the PICS, MICS, PIXIT, TICS and ICD and configured according to the provided SCD.

5.1 Recommendations following from the test

The following comments and recommendations apply for the *DUT*:

- The DUT shall be configured with the allowed IP addresses for the association with a client.
- The IP address of a client shall be different than the rest of the clients associated in the DUT.

APPENDIX A

Detailed test procedures and results

A1 Documentation (IEC 61850-4)

Test case	Test case description	Verdict
sDoc1	Check if the major/minor software version in the PICS documentation and the DUT do match (IEC61850-4). PICS shall contain the ACSI conformance statement according to IEC 61850-7-2 Annex A	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
sDoc2	<p>Check if the major/minor software version in the PIXIT documentation and software version of the DUT does match (IEC61850-4).</p> <p>PIXIT shall indicate the required information as requested in the applicable test cases</p> <p>PIXIT shall keep the entry identifiers from the PIXIT template</p>	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
sDoc3	Check if the major/minor software version in the MICS documentation and software version of the DUT does match (IEC61850-4). MICS shall indicate the semantics of all non-standard Logical Nodes, Data Objects and enumerations	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
sDoc4	Check if the major/minor software version in the TICS documentation and software version of the DUT does match (IEC61850-4). TICS shall indicate that the mandatory and applicable technical issues are implemented	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive

A2 Configuration file (IEC 61850-6)

Test case	Test case description	Verdict
sCnf1	Test if the ICD configuration file validates according to the SCL schema: version 2007, revision B	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
sCnf2	Check if the SCL configuration file used to configure the DUT corresponds with the actual data object references, data types, data sets and pre-configured data values (settings) exposed by the DUT on the network. When more data objects are exposed, attach a list and set the test result to Passed. When less data objects are exposed the test result is Failed. The format of the pre-configured values in SCL shall match IEC 61850-6 Table 45	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
sCnf3	Change at least 5 configurable parameters that are exposed by the DUT on the network in the SCD configuration file, configure the DUT using the SCD configuration file (using the supplied configuration tool) and check the updated configuration using online services corresponds with the updated SCD file. Restore the original SCD file and re-configure the DUT to its original state.	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
sCnf4	Check the ICD if the server capabilities in the IED "services" section(s) do correspond with the ACSI services specified in the PICS (compare TISSUE #901)	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
sCnf5	In case the control model is fixed (PIXIT) check if the ICD correctly initializes the ctlModel values for all controllable objects	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
sCnf6	Check the SCL version = "2007", revision = "B" and nameLength = 64	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
sCnf7	Check the "IdName" naming structure when supported. All online object references (including data sets, control block references and object references - CDC ORG) shall start with the "LDevice IdName" value instead of the "IED name" + "LDevice inst"	<input type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive <input checked="" type="checkbox"/> Not applicable
sCnf8	When GOOSE subscription is supported and when SICS I43 is supported, check that the IED does subscribe to the data attributes as specified in the IID or SCD Inputs - ExtRef elements.	<input type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive <input checked="" type="checkbox"/> Not applicable
sCnf9	The BDA for SBOw, Oper and Cancel DAtype's and DA SBO shall be followed by a ProtNS element with type = 8-MMS and its contents = IEC61850-8-1:2003 or IEC61850-8-1:2007 (IEC 61850-8-1 Subclause 25.5, TISSUE #853)	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive

A3 Data model (IEC 61850-7-3 and IEC 61850-7-4)

Test case	Test case description	Verdict
sMdl1	Verify presence of mandatory data objects for each LN type and data attributes for each DO type. Passed when all objects/attributes are present	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
sMdl2	Verify presence of conditional presence true data objects for each LN type and data attributes for each DO type. Passed when all objects/attributes are present	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
sMdl3	Verify non-presence of conditional presence false data objects for each LN type and data attributes for each DO type. Passed when these objects/attributes are not present	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
sMdl4	Verify data model mapping according to applicable SCSM concerning name length and object expansion. Passed when mapping is according to applicable SCSM	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
sMdl5	Verify data model mapping according to applicable SCSM concerning organisation of functional components.	Deprecated
sMdl6	Verify data model mapping according to applicable SCSM concerning naming of control blocks and logs. Passed when mapping is according to applicable SCSM. Compare detailed test procedure	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
sMdl7	Verify type of all data objects for each LN type and all data attributes for each DO type. Passed when type of all objects/attributes do match with the IEC 61850-7-3, IEC 61850-7-4 and the applicable SCSM	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
sMdl8	Verify that the preconfigured enumerated data attribute values from the device and SCL are in specified range. Passed when all values are in range	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
sMdl9	Check if manufacturer specific data model extensions are implemented according to the extension rules in IEC 61850-7-1 clause 14. Compare detailed test procedure	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
sMdl10	Check if the order of the data attributes with the same functional constraint of the DO type match with IEC 61850-7-3. Passed when all attributes are in matching order	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
sMdl11	Check if the name length of IED, Logical Devices, Logical Nodes, data objects, data attributes, data sets and control blocks do not exceed the maximum length as specified in IEC 61850-7-2 clause 22.2 and SCSM	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
sMdl12	Check that the rules for multiple data object instantiation are kept (IEC 61850-7-1 clause 14.6, IEC 61850-7-4).	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
sMdl13	Check if the logical device name space or the LLN0 logical node name space refers to Edition 2: IEC 61850-7-4:2007 or a newer revision of edition 2 (e.g. IEC 61850-7-4:2007B)	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
sMdl14	Check the correct use of name spaces for non-substation power utility applications like for example Hydro and DER. Compare detailed test procedure	<input type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive <input checked="" type="checkbox"/> Not applicable

Detailed data modelling test procedures

sMdl6	Naming of control blocks and logs	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive																																								
IEC 61850-6 Subclause 9.3.8																																										
<u>Expected result</u> <ul style="list-style-type: none"> Report control blocks may be indexed. The indexing of report control blocks depends on the presence and value of the SCL elements: RptEnabled, max and indexed. According to the SCL schema the default value of indexed=TRUE and max = 1, max = 0 is not allowed. The indexing shall be according to the following table, SCL name="rcbA" <table border="1" style="margin-left: 40px;"> <thead> <tr> <th>RCBName (IED)</th> <th>RptEnabled</th> <th>max=</th> <th>indexed</th> </tr> </thead> <tbody> <tr><td>rcbA01</td><td></td><td></td><td></td></tr> <tr><td>rcbA01</td><td></td><td></td><td>TRUE</td></tr> <tr><td>rcbA</td><td></td><td></td><td>FALSE</td></tr> <tr><td>rcbA01</td><td>y</td><td>1</td><td></td></tr> <tr><td>rcbA01</td><td>y</td><td>1</td><td>TRUE</td></tr> <tr><td>rcbA</td><td>y</td><td>1</td><td>FALSE</td></tr> <tr><td>rcbA01, rcbA02</td><td>y</td><td>2</td><td></td></tr> <tr><td>rcbA01, rcbA02</td><td>y</td><td>2</td><td>TRUE</td></tr> <tr><td>rcbA (only unbuffered)</td><td>y</td><td>2</td><td>FALSE</td></tr> </tbody> </table> <ul style="list-style-type: none"> The report control block attributes owner and resvTms do match with the SCL IED Services element owner and resvTms The setting group control block attribute resvTms does match with the SCL IED Services element SGEdit resvTms The presence of the optional GOOSE control block attributes minTime, maxTime, fixedOffs have no SCL IED Services elements 			RCBName (IED)	RptEnabled	max=	indexed	rcbA01				rcbA01			TRUE	rcbA			FALSE	rcbA01	y	1		rcbA01	y	1	TRUE	rcbA	y	1	FALSE	rcbA01, rcbA02	y	2		rcbA01, rcbA02	y	2	TRUE	rcbA (only unbuffered)	y	2	FALSE

rcbA (only unbuffered)	y	2	FALSE																																							
<u>Test description</u> Verify the naming and attributes of all control blocks and logs in the DUT.																																										
<u>Comment</u> This test case is only applicable for RCB and SGCB. GOOSE is not supported by the DUT.																																										

sMdl8	Enumerated Data attribute values	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-6 Subclause 9.5.6 IEC 61850-7-3 Annex D, TISSUE #686 IEC 61850-7-4 Annex H		
<u>Expected result</u> 1. All ENC enumeration types are correctly defined. Not supported enum values are removed for controllable data objects with common data class ENC. 2. All values are in range, when failed attach a list		
<u>Test description</u> 1. Verify that the enumeration types are defined according IEC 61850-7-3 Annex D, IEC 61850-7-4 Annex H and TISSUE #686. Not supported enum values shall not be included in the ICD file for controllable data objects with common data class ENC 2. Verify that preconfigured enumerated data attribute values from the device and SCL are in specified range.		
<u>Comment</u>		

sMdl9	Data model extensions	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-1 Subclause 13.4.5, 14 TISSUE #828		
<u>Expected result</u> <ul style="list-style-type: none"> • Private LN shall have InNs referring to a non-standard name space • Private DO (not defined in the LN) in a standardized LN shall have a dataNs referring to a non-standard name space • Standardized LN may re-use DO's from another standard LN. The DO may have a dataNs = IEC 61850-7-4:2007[A] or IEC 61850-7-4:2003 • Private DO in a private LN may have a dataNs referring to a non-standard name space • Standardized DO in a private LN <u>may</u> have a dataNs = IEC 61850-7-4:2007[A] or IEC 61850-7-4:2003 • Private CDC are not allowed, private extensions in existing CDC are not allowed • Private data attributes are not allowed • Private ENUM values in a standardized ENUM type shall have a negative ord value • Private ENUM types are only allowed for private DO • Extensions to control blocks are not allowed • Only standardized data types are allowed 		
<u>Test description</u> Scan SCL file for extensions: private LN, private DO, private DA and private ENUMs. Browse DUT for extensions: control blocks		
<u>Comment</u>		

A4 Mapping of ACSI models and services (IEC 61850-7-2 and applicable SCSM)

- A4.1 Application association
- A4.2 Server & Logical Device & Logical Node & Data
- A4.3 Data set
- A4.4 Service tracking
- A4.5 Substitution
- A4.6 Setting group
- A4.7 Unbuffered Reporting
- A4.8 Buffered Reporting
- A4.9 Logging
- A4.10 Generic object oriented substation events (GOOSE)
- A4.11 Control
- A4.12 Time and time synchronization
- A4.13 File transfer

The following table specifies which ACSI services are mandatory / optional for each conformance block.

Table A.4.1: ACSI services per conformance block

Conformance Block	Mandatory	Optional
1: Basic Exchange	Associate, Abort, Release GetServerDirectory(LD) GetLogicalDeviceDirectory GetLogicalNodeDirectory (DATA) GetDataValues GetDataDirectory/GetDataDefinition	GetAllDataValues SetDataValues
2: Data Set	GetLogicalNodeDirectory (DATA-SET) GetDataSetValues GetDataSetDirectory	SetDataSetValues
2+: Data Set Definition	CreateDataSet DeleteDataSet	
3: Substitution	SetDataValues GetDataValues	
4: Setting Group Selection	SelectActiveSG GetSGCBValues	
4+: Setting Group Definition	SelectEditSG GetEditSGValue SetEditSGValue ConfirmEditSGValues	
5: Unbuffered Reporting	Report GetURCBValues SetURCBValues	
6: Buffered Reporting	Report GetBRCBValues SetBRCBValues	

7: Logging	GetLCBValues GetLogicalNodeDirectory (LOG) QueryLogByTime or QueryLogAfter GetLogStatusValues	SetLCBValues
9a: GOOSE publish	SendGOOSEMessage (publish)	GetGoCBValues SetGoCBValues
9b: GOOSE subscribe	SendGOOSEMessage (subscribe)	
9c: GOOSE management	GetGoReference GetGOOSEElementNumber	
12a: Direct control	Operate	TimeActivatedOperate
12b: SBO control	Select, Cancel, Operate	TimeActivatedOperate
12c: Enhanced Direct Control	Operate CommandTermination	TimeActivatedOperate
12d: Enhanced SBO control	SelectWithValue, Cancel, Operate CommandTermination	TimeActivatedOperate
13: Time sync	TimeSynchronization	
14: File transfer	GetServerDirectory(FILE) GetFile GetFileAttributeValues	SetFile DeleteFile
15: Service Tracking	<no specific services>	<no specific services>

The following table specifies which test procedures are mandatory/conditional for each conformance block (defined in Quality Assurance Plan Addendum for IEC 61850). Conditions refer to the SCL, PICS, MICS or PIXIT.

Table A.4.2: Test procedures per conformance block

Conformance Block	Mandatory	Conditional
1: Basic Exchange	sAss1, sAss2, sAss3, sAssN2, sAssN3, sAssN4, sAssN5 sSrv1, sSrv2, sSrv3, sSrv4, sSrv5, sSrvN1abcd, sSrvN4	sAssN6 Semantics: sSrv9, sSrv10 PICS-GetAllDataValues: sSrv8, sSrvN1f PICS-SetDataValues: sSrv6, sSrvN1e, sSrvN2, sSrvN3 SCL-Enum with FC=CF/DC/SP and valKind=Set: sSrvN2 SCL-blkEna: sSrv11 SCL-Mode off/blocked/test: sSrv12 SCL-GrRef: sSrv13
2: Data Sets	sDs1, sDs10a, sDsN1ae	PICS-DataSetValues: sDs10b, sDsN1b, sDsN13 SCL-configurable datasets: sDs15

2+: Data Set Definition	sDs2, sDs3, sDs4, sDs5, sDs6, sDs7, sDs8, sDs9, sDs11, sDs13, sDs14, sDsN1cd sDsN2, sDsN3, sDsN4, sDsN5 sDsN6, sDsN7, sDsN8, sDsN8, sDsN9, sDsN10,	PICS-Report: sDsN11, sDsN12 SCL-maxAttributes: sDs12
3: Substitution	sSub1, sSub2, sSub3	
4: Setting Group Selection	sSg1, sSg3, sSgN1	SCL-numOfSg>1 or PICS-SGediting: sSg11
4+: Setting Group Definition	sSg2, sSg4. sSg7, sSg8, sSg10, sSgN2, sSgN3, sSgN4, sSgN5	SCL-ResvTms: sSg5, sSg6 SCL-NumOfSg>1: sSg9
5: Unbuffered Reporting	sRp1, sRp2, sRp3, sRp4, sRp5, sRp9, sRp14, sRp15, sRpN1, sRpN2, sRpN3, sRpN4, sRpN8	SCL-DatSet=dyn: sRp6, sRp7 SCL-DatSet=conf/dyn: sRp10 SCL-BufTm=conf/dyn: sRp8, sRp11, sRp12 SCL-Owner: sRp13 SCL-URCB visible to all clients: sRpN5
6: Buffered Reporting	sBr1, sBr2, sBr3, sBr4, sBr5, sBr9, sBr14, sBr15, sBr20, sBr21, sBr22, sBr25. sBr26, sBr27, sBr28 sBrN1, sBrN2, sBrN3, sBrN4, sBrN5, sBrN8	SCL-DatSet=dyn: sBr6, sBr7 SCL-DatSet=conf/dyn: sBr10 SCL-BufTm=conf/dyn: sBr8, sBr11, sBr12 SCL-Owner: sBr13 SCL-ResvTms: sBr23, sBr24
7: Logging	sLog2, sLog3, sLog4, sLog5, sLog6, sLog9, sLog11, sLog12, sLogN1, sLogN2	PICS-QueryLogByTime: sLog7 PICS-QueryLogAfter: sLog8 MICS-GLOG: sLog10
9a: GOOSE publish	sGop2a, sGop3, sGop4, sGop7, sGop9, sGop10, sGop11	PICS-GetGoCBValues: sGop1 SCL-Fixed offset: sGop2b PIXIT-Simulation: sGop5 PICS-SetGoCBValues: sGop6, sGopN1 PIXIT-non test equipment: sGop7 PIXIT-Dataset to large: sGopN2
9b: GOOSE subscribe	sGos1, sGos2, sGos3, sGos5, sGos6a, sGos7, sGosN1, sGosN2, sGosN3, sGosN4, sGosN5, sGosN6	MICS-LGOS: sGos4 PIXIT-Simulation: sGos6b
9c: GOOSE management	sGom1, sGom2, sGomN1	

12: Control general	sCtl5, sCtl8, sCtl9, sCtl10, sCtl11, sCtl14, sCtl25	<p>SCL-Writable control model: sCtl2 PICS-TimOper: sCtl3 MICS-stSeld: sCtl4 SCL-multiple SBO: sCtl6 SCL-CILO: sCtl7 SCL-Select on DO: sCtl13 Operate time: sCtl14 PIXIT-Mode off/blocked: sCtl15 SCL-Loc: sCtl16 SCL-LocSta: sCtl17 SCL-CmdBlk: sCtl18 SCL-blkEna: sCtl19 PIXIT-AddCause:</p> <ul style="list-style-type: none"> • Parameter-change-in-execution: sCtl20 • Step-limit: sCtl21 • Ended-with-overshoot: sCtl23 • Abortion-due-to-deviation: sCtl24 • Command-already-in-execution: sCtl26 <p>SCL-SBO and SBOw: sCtl27</p>
12a Direct control	sDOns1, sDOns2	PICS-TimOper: sDOns4, sDOns5
12b SBO control	sSBOns1, sSBOns2, sSBOns6	PICS-TimOper: sSBOns4, sSBOns5 PIXIT-Operate-Many: sSBOns7
12c Enhanced Direct Control	sDOes1, sDOes2	PICS-TimOper: sDOes4, sDOes5
12d Enhanced SBO control	sSBOes1, sSBOes2, sSBOes6, sSBOes8	PICS-TimOper: sSBOes4, sSBOes5 PIXIT-Operate-Many: sSBOes7
13: Time sync	sTm1, sTm2, sTmN1	PIXIT-COMTRADE: sTm3 SCL-LTIM: sTm4 SCL-LTMS: sTm5 PIXIT-ClockFailure: sTmN2
14: File transfer	sFt1, sFt2ab, sFt4, sFt5, sFtN1ab	PICS-SetFile: sFt3 PICS-DeleteFile: sFt2c, sFtN1c
15: Service tracking		<p>SCL-BrcbTrk: sTrk1 SCL-UrcbTrk: sTrk2 SCL -LocbTrk: sTrk3 SCL -GocbTrk: sTrk4 SCL -MsvcbTrk: sTrk5 SCL -UsvcbTrk: sTrk6 SCL -SgcbTrk: sTrk7 SCL -SpcTrk: sTrk8 SCL -DpcTrk: sTrk9 SCL -IncTrk: sTrk10 SCL -EncTrk: sTrk11 SCL -IscTrk: sTrk12 SCL -BscTrk: sTrk13 SCL -ApcFTrk: sTrk14 SCL -ApcITrk: sTrk15 SCL -BacTrk: sTrk16 SCL -GenTrk: sTrk17</p>

Note that sAssN1, sSrv7, sCtl12, sCtl22, sRpN6, sRpN7, sBrN6, sBrN7, sLog1, sGop8, sDOns3, sSBOns3, sDOes3 and sSBOes3 are not applicable for IEC 61850-8-1 and not referenced in this table.

The following paragraphs describe the abstract test cases and corresponding detailed test procedures.

A4.1 Application association

Abstract test cases

Test case	Test case description
sAss1	Associate and client-release a TPAA association (IEC 61850-7-2 Subclause 8.3.2)
sAss2	Associate and client-abort TPAA association (IEC 61850-7-2 Subclause 8.3.2)
sAss3	Associate with maximum number of clients simultaneously (PIXIT)

Test case	Test case description
sAssN1	Check that with incorrect authentication parameters and authentication turned on at server the association fails, and with authentication turned off the server associates (IEC 61850-7-2 Subclause 8.3)
sAssN2	Check that with incorrect association parameters at server or client the association fails (IEC 61850-7-2 Subclause 8.3, PIXIT)
sAssN3	Set up maximum+1 associations, verify the last associate is refused
sAssN4	Disconnect the communication interface, the DUT shall detect association lost within a specified period
sAssN5	Interrupt and restore the power supply, the DUT shall accept an association request when ready
sAssN6	Verify the re-use of dropped association resources

Detailed test procedures

sAss1	Associate and client-release a TPAA association	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 8.3.2 IEC 61850-8-1 Subclause 10.2		
<u>Expected result</u>		
2. DUT sends Associate response+		
3. DUT sends Release response+		
<u>Test description</u>		
1. Configure the Client and DUT with the correct association and authentication parameters		
2. Client request Associate		
3. Client request Release		
4. Repeat step 2 and 3 250 times		
<u>Comment</u>		

sAss2	Associate and client-abort TPAA association	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 8.3.2 IEC 61850-8-1 Subclause 10.2		
<u>Expected result</u>		
2. DUT sends Associate response+ 3. DUT sends Abort response+		
<u>Test description</u>		
1. Configure the Client and DUT with the correct association and authentication parameters 2. Client requests Associate 3. Client requests Abort 4. Repeat step 2 and 3 250 times		
<u>Comment</u>		

sAss3	Associate with maximum number of clients simultaneously	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 8.3.2 IEC 61850-8-1 Subclause 10.2		
<u>Expected result</u>		
2. DUT sends Associate response+ for each client 3. DUT sends Release response+ for each client		
<u>Test description</u>		
1. Configure the Client and DUT with the correct association and authentication parameters 2. Client 1 to max requests Associate 3. Client 1 to max requests Release 4. Repeat step 2 and 3 250 times		
<u>Comment</u>		
Tested with UniGrid tool with maximum number of clients= 6.		

sAssN2	Associate with incorrect association parameters	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 8.3.2 IEC 61850-8-1 Subclause 10.2, PIXIT: As5, As6		
<u>Expected result</u> 1. DUT sends Associate response+ 2. DUT sends Release response+ 4. DUT sends Associate response- when PIXIT indicates the DUT verifies the parameter, otherwise the DUT sends Associate response+		
<u>Test description</u> 1. Configure the Client and DUT with correct association and authentication parameters and request Associate 2. Client requests Release 3. Configure the Client and DUT with correct authentication parameters and one of the following incorrect configurable association parameters: <ul style="list-style-type: none"> • called / calling transport selector • called / calling session selector • called / calling presentation selector • called / calling AP title • called / calling AE qualifier 4. Client requests Associate 5. When DUT sends Associate response+, Client sends Release request 6. Repeat step 1 to 5 for the next association parameter till all parameters are verified		
<u>Comment</u> The following table indicates the associate response results with incorrect: <ul style="list-style-type: none"> • called / calling transport selector + / + • called / calling session selector + / + • called / calling presentation selector + / + • called / calling AP title + / + • called / calling AE qualifier + / + “-” = associate failed, DUT does check the incorrect parameter and sends response- “+” = associate succeeded, DUT does not check the incorrect parameter and sends response+		

sAssN3	Associate with maximum+1 number of clients simultaneously	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 8.3.2 IEC 61850-8-1 Subclause 10.2		
<u>Expected result</u> 2. DUT sends Association response+ for at least the maximum server associates as defined in the PIXIT and response- for the last associate 3. DUT sends Release response+		
<u>Test description</u> 1. Configure the Client and DUT with the correct association and authentication parameters 2. Client 1 to N send Associate requests until the DUT sends response- 3. Client 1 to N-1 send release 4. Repeat step 2 and 3 250 times		
<u>Comment</u> Tested with UniGrid tool with maximum number of clients= 6.		

sAssN4	Detection of lost link	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 8.3.2 IEC 61850-8-1 Subclause 10.2, PIXIT: As2, As3		
<u>Expected result</u> 2. DUT sends Associate response+ 3. DUT sends GetDataValues response+ 4. DUT sends KEEP ALIVE messages according to PIXIT specified interval 7. DUT sends no response		
<u>Test description</u> 1. Configure the Client and DUT with the correct association and authentication parameters 2. Client requests Associate 3. Client requests a correct GetDataValues 4. Wait multiple KEEP ALIVE timeouts 5. Disable TCP communication between the Client and the DUT. E.g. disconnect the physical link, between two Ethernet switches (preventing Ethernet hardware error detection at both client and server), some seconds longer than the KEEP ALIVE timeout specified in the PIXIT 6. Enable TCP communication. E.g. connect the physical link 7. Verify the DUT has lost the association by sending a correct GetDataValues request		
<u>Comment</u>		

sAssN5	Power supply interrupt	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 8.3.2 IEC 61850-8-1 Subclause 10.2, PIXIT: As8		
<u>Expected result</u> 2. DUT sends Associate response+ 4. The DUT sends Associate response+ within the specified power-up time (PIXIT)		
<u>Test description</u> 1. Configure the Client and DUT with the correct association and authentication parameters 2. Client requests Associate 3. Power down and wait until DUT is off. Restore the DUT power supply and wait the specified power-up time (PIXIT) or until the DUT is initialised 4. Client requests Associate		
<u>Comment</u>		

A4.2 Server & Logical Device & Logical Node & Data

Abstract test cases

Test case	Test case description
sSrv1	Request GetServerDirectory(LOGICAL-DEVICE) and check response (IEC 61850-7-2 Subclause 7.2.2)
sSrv2	For each GetServerDirectory(LOGICAL-DEVICE) response issue a GetLogicalDeviceDirectory request and check response (IEC 61850-7-2 Subclause 9.2.1)
sSrv3	For each GetLogicalDeviceDirectory response issue a GetLogicalNodeDirectory(DATA) request and check response (IEC 61850-7-2 Subclause 10.2.2)
sSrv4	For each GetLogicalNodeDirectory(DATA) response issue a GetDataDirectory request and check response (IEC 61850-7-2 Subclause 11.4.4) GetDataDefinition request and check response (IEC 61850-7-2 Subclause 11.4.5) GetDataValues request and check response (IEC 61850-7-2 Subclause 11.4.2)
sSrv5	Issue one GetDataValues request with different data reference hierarchy
sSrv6	For each write enabled DATA object issue a SetDataValues request and check response (IEC 61850-7-2 Subclause 11.4.3)
sSrv7	Issue one SetDataValues request with the maximum number of data values and check response. (Deprecated, this is not a valid SetDataValues request)
sSrv8	Request GetAllDataValues for each functional constraint and check response (IEC 61850-7-2 Subclause 10.2.3)
sSrv9	Evaluate the semantic of selected (volt/amp) analogue measurements: Verify analogue value (plausibility check, not accuracy) Verify quality bits, force situations to set specific quality bits Verify (UTC) timestamp value and quality (plausibility check, not accuracy) Verify scaling, range and units, change a setting and verify resulting value Verify dead band, change dead band and verify result Verify limit indications
sSrv10	Evaluate the semantic of selected status points: Verify status value Verify quality bits, force situations to set specific quality bits Verify (UTC) timestamp value and quality (plausibility check, not accuracy)
sSrv11	Verify that when blkEna is set to true by an operator the quality bit oldData and operatorBlocked is set by the server and the process data is not updated anymore (IEC 61850-7-3 Subclause 6.2.6)
sSrv12	Verify Mod/Beh values: off, test, blocked When Mod/Beh is off process data is not updated, Mod and Beh are updated, quality is set to invalid When Mod/Beh is test or test-blocked the process data quality test is set When Mod/Beh is on-blocked the process data quality is valid (IEC 61850-7-4 Annex A, TISSUE #712)
sSrv13	Verify logical device hierarchy; the LLN0.GrRef shall reference a valid logical device the reference shall not result in a hierarchy loop Beh value at higher level influences the lower levels correctly (i.e. like LD Beh influences LN behaviour dependent on LN Mod)

Test case	Test case description
sSrvN1	Request following data services with wrong parameters (unknown object, name case mismatch, wrong logical device or wrong logical node) and verify response- service error GetServerDirectory(LOGICAL-DEVICE) (IEC 61850-7-2 Subclause 7.2.2) GetLogicalDeviceDirectory (IEC 61850-7-2 Subclause 9.2.1) GetLogicalNodeDirectory(DATA) (IEC 61850-7-2 Subclause 10.2.2) GetAllDataValues (IEC 61850-7-2 Subclause 10.2.3) GetDataValues (IEC 61850-7-2 Subclause 11.4.2) SetDataValues (IEC 61850-7-2 Subclause 11.4.3) GetDataDirectory (IEC 61850-7-2 Subclause 11.4.4) GetDataDefinition (IEC 61850-7-2 Subclause 11.4.5)
sSrvN2	Request SetDataValues of ENUMERATED data with out-of-range value and verify response- service error (IEC 61850-7-2 Subclause 11.4.3)
sSrvN3	Request SetDataValues with mismatching data type (e.g. int-float) and verify response- service error (IEC 61850-7-2 Subclause 11.4.3)
sSrvN4	Request SetDataValues for read-only data values and verify response- service error (IEC 61850-7-2 Subclause 11.4.3)

Detailed test procedures

sSrv1	GetServerDirectory(LOGICAL-DEVICE)	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 7.2.2 IEC 61850-8-1 Subclause 9.3		
<u>Expected result</u>		
1. DUT sends Association response+ 2. DUT sends GetServerDirectory(LOGICAL-DEVICE) response+ with a list of logical devices		
<u>Test description</u>		
1. Client requests correct Association 2. Client requests GetServerDirectory(LOGICAL-DEVICE) 3. Continue with sSrv2		
<u>Comment</u>		

sSrv2	GetLogicalDeviceDirectory	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 9.2.1 IEC 61850-8-1 Subclause 11.1		
<u>Expected result</u>		
1. DUT sends GetLogicalDeviceDirectory response+ with a list of logical nodes within the logical device		
<u>Test description</u>		
1. For each responded logical device Client requests GetLogicalDeviceDirectory 2. Continue with sSrv3		
<u>Comment</u>		

sSrv3	GetLogicalNodeDirectory(DATA)	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 9.2.2 IEC 61850-8-1 Subclause 12.3.1		
<u>Expected result</u>		
1. DUT sends GetLogicalNodeDirectory(DATA) response+ with a list of data		
<u>Test description</u>		
1. For each responded logical node directory Client requests GetLogicalNodeDirectory(DATA) 2. Continue with sSrv4		
<u>Comment</u>		

sSrv4	GetDataDirectory, GetDataDefinition and GetDataValues	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 11.4.4, 11.4.5 and 11.4.2 IEC 61850-8-1 Subclause 13.4.3, 13.4.4 and 13.4.1		
<u>Expected result</u>		
1. <ul style="list-style-type: none"> a) DUT sends GetDataDirectory response+ b) DUT sends GetDataDefinition response+ c) DUT sends GetDataValues response+ 		
<u>Test description</u>		
1. For each responded data object Client requests a: <ul style="list-style-type: none"> a) GetDataDirectory b) GetDataDefinition c) GetDataValues 		
<u>Comment</u>		

sSrv5	GetDataValues with data hierarchy	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 11.4.2 IEC 61850-8-1 Subclause 13.2.1		
<u>Expected result</u>		
1. DUT sends GetDataValues response+ with requested data hierarchy		
<u>Test description</u>		
1. Client requests one GetDataValues of at least the following data objects for the supported data hierarchy level: <ul style="list-style-type: none"> • Functional constrained data: LLN0\$ST\$Mod • Functional constrained data attribute: LLN0\$ST\$Mod\$stVal • Functional constrained data attribute type attribute 		
<u>Comment</u>		

sSrv6	SetDataValues	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 11.4.3 IEC 61850-8-1 Subclause 13.2.2		
<u>Expected result</u> 1. DUT sends SetDataValues response- with data access error "object-access-denied" 2. DUT sends SetDataValues(FC=BL, CF,SP, DC) response- for read-only data and response+ for write enabled data as specified in the ICD using valKind="RO" for read-only and "Set" for write enabled data attributes. 3. DUT sends SetDataValues response+ 4. DUT sends GetDataValues response+ with requested value, the value does match 5. DUT sends SetDataValues response+ 6. DUT sends GetDataValues response+ with requested value, the value does match		
<u>Test description</u> 1. For each data object with FC=ST, MX or EX client sends a SetDataValues request with the current value 2. For each data object with FC=BL, CF, SP or DC client sends a SetDataValues request with the current value For each type of write-enabled data objects 3. Client sends a SetDataValues with a valid new value 4. Client sends a GetDataValues request and check the value does match 5. Client sends a SetDataValues with the original value 6. Client sends a GetDataValues request and check the value does match		
<u>Comment</u> The DUT has writable attributes with FC = SP.		

sSrv8	GetAllDataValues	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclaucse 10.2.3 IEC 61850-8-1 Subclause 12.3.2		
<u>Expected result</u> 1. DUT sends GetAllDataValues response+ 2. DUT sends GetAllDataValues response+		
<u>Test description</u> 1. For each Logical Node and supported functional constraint the Client sends a GetAllDataValues request using MMS Alternate Access where the alternate access contains at least an allowed Data FC = ST, MX, CF, SP, DC, EX, BL, OR. 2. For each Logical node the Client sends a GetAllDataValues request using object reference <IED><LD>/<LN>\$<FC> where FC = ST, MX, CF, SP, DC, EX, BL, OR.		
<u>Comment</u>		

sSrv9	Semantic of measured value (MV)	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-3 Subclause 6.2, 6.3, 6.4, 6.5 and 7.4.2, Table 3 PIXIT: Sr1		
<p><u>Expected result</u></p> <p>2. DUT sends GetDataValues Response+, the instantaneous / dead banded value does match the forced change</p> <p>4. DUT sends GetDataValues Response+. The quality shall match the forced value.</p> <p>5. DUT sends GetDataValues Response+. verify differences in the instantaneous and dead banded value</p> <p>For all above steps:</p> <ul style="list-style-type: none"> • Default quality attribute value shall be supplied when the functionality of the related quality attribute is not supported (PIXIT) • When supported the scaling, range, units and dead band functionality shall be supplied • The quality validity shall follow the quality details according to table 3 		
<p><u>Test description</u></p> <p>1. Force EQUIPMENT SIMULATOR to change the measured value.</p> <p>2. Client request GetDataValues</p> <p>3. Force situation to set the following supported quality values for this measured value:</p> <ul style="list-style-type: none"> • validity: good, invalid, questionable • detail: overflow, out of range, bad reference, failure, old data, inaccurate, inconsistent • source: process <p>4. Change the scale, range and units and repeat steps 1 and 2</p> <p>5. Change the dead band and repeat steps 1 and 2</p>		
<p><u>Comment</u></p> <p>PIXIT indicates that the following quality bits are supported: Validity: Good, Invalid, Questionable, Overflow; Source: Process, Test</p> <p>The following quality bits could be forced for the specified data object: AK_FLOAT/MMXU1.MX.PPV.phsAB: Good, Invalid, Questionable, Overflow, Process</p> <p>Note: quality source substituted is tested during Substitution, quality test is tested in sSrv12, quality operatorBlocked at sSrv11.</p>		

sSrv10	Semantic of single and double point status value	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-3 Subclause 6.2, 6.3, 6.4, 6.5 and 7.4.2, Table 3 PIXIT: Sr2		
<u>Expected result</u> 1. DUT sends GetDataValues Response+, status value matches the forced change. 2. DUT sends GetDataValues Response+. The quality shall match the forced value. The quality validity shall follow the quality details according to table 3 The default quality attribute value shall be supplied when the functionality of the related quality attribute is not supported (PIXIT)		
<u>Test description</u> 1. Force EQUIPMENT SIMULATOR to change a single and/or double point status value 2. Client request GetDataValues for the q, t and stVal members of the status point value 3. Force situation to set the following quality values for this status point: <ul style="list-style-type: none"> • validity: good, invalid, questionable • detail: oscillatory, failure, old data, inconsistent • source: process 4. Client requests GetDataValues for the q, t and stVal members of the status point value 5. Repeat steps 3 and 4 for the other supported quality bits		
<u>Comment</u> PIXIT indicates that the following quality bits are supported: Validity: Good, Invalid, Questionable, Overflow; Source: Process, Test The following quality bits could be forced for the specified data object: AK_IND/GGIO2.ST.DPCSO1: Good, Invalid, Questionable, Process Note: quality source substituted is tested during Substitution, quality test is tested in sSrv12, quality operatorBlocked at sSrv11.		
sSrv12	Mode / Behaviour: off, test and/or blocked	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-4 Table 10, Annex A IEC 61850-8-1 Subclause 13.4.1, 13.4.2 TISSUE #712		
<u>Expected result</u> 2. Mode and behaviour values are updated, quality of process data is invalid 4. Mode and behaviour values are updated, quality bit "test" is set in process data 6. Mode and behaviour values are updated, quality bit "test" is set in process data 8. Mode and behaviour values are updated, quality is the same as in Mode = On (TISSUE #712) 10. Mode and behaviour values are updated, all quality bits are cleared in process data		
<u>Test description</u> 1. Force DUT into Mode = Off for one logical node (when supported) 2. Client requests GetDataValues of the Mode, Behaviour and process data 3. Force DUT into Mode = Test for one logical node (when supported) 4. Client requests GetDataValues of the Mode, Behaviour and process data 5. Force DUT into Mode = Test-blocked for one logical node (when supported) 6. Client requests GetDataValues of the Mode, Behaviour and process data 7. Force DUT into Mode = blocked for one logical node (when supported) 8. Client requests GetDataValues of the Mode, Behaviour and process data 9. Force DUT into Mode = On for one logical node 10. Client requests GetDataValues of the Mode, Behaviour and process data		
<u>Comment</u> DUT does not support mode = test-blocked, therefore steps 5) and 6) are not applicable and not tested.		

sSrvN1	LD/LN/Data services with incorrect parameters	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 7.2.2, 8.2.1, 10.2-3, 11.4.2-5 IEC 61850-8-1 Subclause 8.1.3.4		
<u>Expected result</u> 1. <ol style="list-style-type: none"> a) DUT sends MMS service error with error class access "object-non-existent" b) DUT sends MMS service error with error class access "object-non-existent" c) DUT sends MMS service error with error class access "object-non-existent" d) DUT sends response with data access error "object-non-existent" e) DUT sends response with data access error "object-non-existent" f) DUT sends response with data access error "object-non-existent" 		
<u>Test description</u> 1. Client requests the following data services with wrong parameters (unknown object, logical device and/or logical node, known object but with a name case mismatch when applicable): <ol style="list-style-type: none"> a) GetLogicalDeviceDirectory b) GetLogicalNodeDirectory(DATA) c) GetDataDirectory / GetDataDefinition (same for part 8-1) d) GetDataValues e) SetDataValues f) GetAllDataValues 		
<u>Comment</u>		

sSrvN3	SetDataValues with mismatching data type	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 11.4.3 IEC 61850-8-1 Subclause 8.1.3.4.4.2, Table 23		
<u>Expected result</u> 1. DUT sends response with data access error "type-inconsistent" 2. DUT sends response with data access error "type-inconsistent" 3. DUT sends response with data access error "type-inconsistent" 4. DUT sends response with data access error "type-inconsistent"		
<u>Test description</u> 1. Client sends a SetDataValues request with an integer data object with a float value 2. Client sends a SetDataValues request with a float data object with an integer value 3. Client sends a SetDataValues request with a boolean data object with a float value 4. Client sends a SetDataValues request with a bitstring data object with a float value		
<u>Comment</u> DUT contains only writable float data objects, therefore only step 2) is applicable and tested.		

sSrvN4	SetDataValues of read-only FCDA	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 11.4.3 IEC 61850-8-1 Subclause 8.1.3.4.4.2, Table 23		
<u>Expected result</u> 1. DUT sends response with data access error "object-access-denied"		
<u>Test description</u> 1. Client sends a SetDataValues request with an read-only FCDA		
<u>Comment</u>		

A4.3 Data set

Abstract test cases

Test case	Test case description
sDs1	Request GetLogicalNodeDirectory(DATA-SET) and check response (IEC 61850-7-2 Subclause 10.2.2) For each response issue a GetDataSetValues request and check response (IEC 61850-7-2 Subclause 13.3.2) GetDataSetDirectory request and check response (IEC 61850-7-2 Subclause 13.3.6)
sDs2	Request a persistent CreateDataSet with one member and with maximum possible members and check response (IEC 61850-7-2 Subclause 13.3.4) and verify that the persistent data set is visible for another client
sDs3	Request a non-persistent CreateDataSet with one, maximum members and check response (IEC 61850-7-2 Subclause 13.3.4) and verify that the persistent data set is not visible for another client
sDs4	Create and delete a persistent dataset, create the dataset again with the same name with one extra data value / re-ordered member and check the members
sDs5	Create and delete a non-persistent dataset, create the dataset again with the same name with one extra data value / re-ordered member and check the members
sDs6	Create a non-persistent dataset, release/abort the association, associate again and check the dataset has been deleted (IEC 61850-7-2 Subclause 13.1)
sDs7	Create a persistent dataset, release/abort the association, associate again and check the dataset is still present (IEC 61850-7-2 Subclause 13.1)
sDs8	Create and delete a persistent data set several times and verify every data set can be created normally
sDs9	Create and delete a non-persistent data set several times and verify every data set can be created normally
sDs10	Verify SetDataSetValues / GetDataSetValues with GetDataValues and SetDataValues
sDs11	Verify that the maximum number of persistent data sets with the maximum number of members can be created as specified in SCL
sDs12	Verify that the maximum number of non-persistent data sets with the maximum number of members can be created as specified in SCL
sDs13	Verify that a persistent data set can be created with the maximum name length for data set and a data set member (IEC 61850-7-2 Subclause 22.2)
sDs14	Verify that a non-persistent data set can be created with the maximum name length for data set and a data set member (IEC 61850-7-2 Subclause 22.2)
sDs15	Verify that the DUT supports data sets containing elements with different data hierarchy levels

Test case	Test case description
sDsN1	Request following data set services with wrong parameters (unknown object, name case mismatch, wrong logical device or wrong logical node) and verify response- service error: GetDataSetValues (IEC 61850-7-2 Subclause 13.3.2) SetDataSetValues (IEC 61850-7-2 Subclause 13.3.3) CreateDataSet (IEC 61850-7-2 Subclause 13.3.4) DeleteDataSet (IEC 61850-7-2 Subclause 13.3.5) GetDataSetDirectory (IEC 61850-7-2 Subclause 13.3.6)
sDsN2	Create a persistent dataset with the same name twice, and verify response- service error
sDsN3	Create a non-persistent dataset with the same name twice, and verify response- service error
sDsN4	Continue to create persistent data sets until a correct response- service error is returned

Test case	Test case description
sDsN5	Continue to create non-persistent data sets until a correct response- service error is returned
sDsN6	Create a persistent dataset with unknown member verify response- service error
sDsN7	Create a non-persistent dataset with unknown member verify response- service error
sDsN8	Delete a (pre-defined) non-deletable dataset, and verify response- service error
sDsN9	Delete a persistent dataset twice, and verify response- service error
sDsN10	Delete a non-persistent dataset twice, and verify response- service error
sDsN11	Delete a persistent dataset referenced by a (report) control class, and verify response- service error (IEC 61850-7-2 Subclause 13.1)
sDsN12	Delete a non-persistent dataset referenced by a (report) control class, and verify response- service error (IEC 61850-7-2 Subclause 13.1)
sDsN13	Request SetDataSetValues with a dataset with one or more read-only members, and verify response- service error

Detailed test procedures

sDs1	GetLogicalNodeDirectory, GetDataSetDirectory, GetDataSetValues	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 10.2.2, 13.3.2, 13.3.6 IEC 61850-8-1 Subclause 14.3		
<u>Expected result</u>		
1. DUT sends a GetLogicalNodeDirectory (DATA-SET) response+ 2. DUT sends a GetDataSetDirectory response+ 3. DUT sends a GetDataSetValues response+		
<u>Test description</u>		
1. For each logical node Client requests a GetLogicalNodeDirectory (DATA-SET) 2. For each returned data set, Client requests a GetDataSetDirectory 3. For each returned data set, Client requests a GetDataSetValues		
<u>Comment</u>		

sDs10	GetDataSetValues, SetDataSetValues	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 13.3.2, 13.3.3 IEC 61850-8-1 Subclause 12.3.1, 14.3.1, 14.3.3, 14.3.4		
<u>Expected result</u> a) The DUT returns the corresponding values for GetDataSetValues and GetDataValues b) Before the SetDataSetValues: The values returned by GetDataSetValues and GetDataValues correspond After the SetDataSetValues: The values returned by GetDataSetValues and GetDataValues correspond and contain the new values as set with SetDataSetValues and SetDataValues. Every service request results in a corresponding response+		
<u>Test description</u> a) Select or create a data set with read-only elements Client requests a GetDataSetValues Client requests a GetDataValues for each member of the dataset. b) Select or create a data set with writable elements Client requests a GetDataSetValues Client requests a GetDataValues for each member of the dataset. Client requests a SetDataSetValues with different values than received by GetDataValues Client requests a GetDataSetValues Client requests a SetDataValues for each member of the dataset with different values than received by GetDataSetValues Client request GetDataSetValues		
<u>Comment</u> Only step a) is applicable and tested.		

sDs15	Dataset with most to least data hierarchy FCDA elements	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 10.2.2, 13.3.2, 13.3.6 IEC 61850-8-1 Subclause 14.3 TISSUE #1174		
<u>Expected result</u> 1. In the SCL file the FCDA doName contains maximum one dot (for example doName="neut.phsA" and daName="cVal.mag.f") 2. DUT sends a GetDataSetDirectory response+ 3. DUT sends a GetDataSetValues response+		
<u>Test description</u> 1. Configure DUT with one or more datasets with the least detailed data hierarchy to the most detailed data hierarchy available in the DUT data model. For example: <ul style="list-style-type: none"> • MMXU.PhV • MMXU.A.phsA • MMXU.A.phsB.cVal • MMXU.A.phsC.cVal.mag • MMXU.A.neut.cVal.mag.f 2. Client requests a GetDataSetDirectory for these datasets 3. Client requests a GetDataSetValues for these datasets		
<u>Comment</u>		

sDsN1	DataSet services with illegal parameters	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 13.3.2, 13.3.3, 13.3.4, 13.3.5, 13.3.6 IEC 61850-8-1 Subclause 8.1.3.4		
<u>Expected result</u> a) DUT sends ServiceError with errorClass=access errorCode=object-non-existent b) DUT sends ServiceError with errorClass=access errorCode=object-non-existent c) DUT sends ServiceError with errorClass=access errorCode=object-non-existent d) DUT sends DeleteDataSet response- with numberMatched=0, numberDeleted=0 e) DUT sends ServiceError with errorClass=access errorCode=object-non-existent		
<u>Test description</u> a) <ol style="list-style-type: none"> 1. Client requests a GetDataSetValues with an unknown data set name as DataSetReference. 2. Client requests a GetDataSetValues for a known data set but with the first character of the DataSetReference in opposite case. E.g. if the first character is 'M', use 'm' now. If it was 'm', use 'M'. 3. Client requests a GetDataSetValues with a non-existing Logical Device in the DataSetReference 4. Client requests a GetDataSetValues where the Logical Device in the DataSet reference is replaced by another, existing Logical Device in this DUT, but which does not contain a dataset with the same name 5. Client requests a GetDataSetValues with a non-existing Logical Node in the DataSetReference 6. Client requests a GetDataSetValues where the Logical Node in the DataSet reference is replaced by another, existing Logical Node in another Logical Device in the DUT b) Repeat steps 1 to 6 for SetDataSetValues c) Repeat steps 3 and 5 for CreateDataSet d) Repeat steps 1 to 6 for DeleteDataSet e) Repeat steps 1 to 6 for GetDataSetDirectory		
<u>Comment</u> Only steps a) and e) are applicable and tested.		

A4.6 Setting group control

Abstract test cases

Test case	Test case description
sSg1	Request GetLogicalNodeDirectory(SGCB) and check response+. For each SGCB request GetSGCBValues and check response+
sSg2	Verify the following setting group state machine path (IEC 61850-7-2 Subclause 16 figure 22); SelectEditSG Use SetEditSGValue [FC=SE] to change values Use GetEditSGValue [FC=SE] to verify the new values ConfirmEditSGValues
sSg3	Verify SelectActiveSG (IEC 61850-7-2 Subclause 16 figure 22); SelectActiveSG of the first setting group GetSGCBValues to verify active setting group and last activation time Use GetDataValues to verify the values are of first setting group Repeat for all setting groups
sSg4	Verify that after loss of association the server cancels the editing (EditSG=0) and the client can use SelectEditSG again to copy the values to the edit buffer (IEC 61850 7-2 Subclause 16.3.3)
sSg5	Verify that when SGCB ResvTms is present The first client can edit the setting group when ResvTms = 0 A second client can not edit the setting group when ResvTms > 0 A server resets the ResvTms when it does not receive a ConfirmEditSGValues within the reservation time
sSg6	Verify that when SGCB ResvTms is not present The first client can edit the setting group A second client can't edit the setting group within a certain time (PIXIT)
sSg7	Verify that editing and activating the active setting group is allowed
sSg8	Verify that a client can cancel the editing of a setting group and that the original setting group values remain unchanged
sSg9	Request SelectEditSG of the first setting group, change one value and SelectEditSG of the second setting group without (ConfirmEditSGValues). Verify the response+
sSg10	Verify that when a setting group is being edited the SG values of that group can be read
sSg11	Verify that the active setting group number is stored in non-volatile memory
sSg12	Verify that when new settings are confirmed these settings are stored in non-volatile memory

Test case	Test case description
sSgN1	Request following setting group <u>selection</u> services with wrong parameters (out of range values, or non-existent/null setting group) and verify response- service error SelectActiveSG (IEC 61850-7-2 Subclause 16.3.2) GetSGCBValues (IEC 61850-7-2 Subclause 16.3.7)
sSgN2	Request following setting group <u>definition</u> services with wrong parameters (out of range values, or non-existent/null setting group) and verify response- service error SelectEditSG (IEC 61850-7-2 Subclause 16.3.3) SetEditSGValue (IEC 61850-7-2 Subclause 16.3.4) ConfirmEditSGValues (IEC 61850-7-2 Subclause 16.3.5) GetEditSGValue [FC=SE] (IEC 61850-7-2 Subclause 16.3.6)
sSgN3	Request SetEditSGValue on a setting group value with FC=SG, verify response- service error
sSgN4	Request SetEditSGValue and GetEditSGValue without SelectEditSG (EditSG = 0), verify response- service error
sSgN5	Verify that when a client is editing settings, another client can't edit settings

Detailed test procedures

sSg1	GetLogicalNodeDirectory(SGCB) and GetSGCBValues	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 10.2.2, 16.3.7 IEC 61850-8-1 Subclause 12.3.1, 16.2.6		
<u>Expected result</u> 1. DUT sends response+ with zero or one SGCB. The SGCB shall only be present in LLN0 and shall have the name "SGCB" 2. DUT sends GetSGCBValues response+ with the mandatory SGCB attributes		
<u>Test description</u> 1. For each logical device and logical node Client requests GetLogicalNodeDirectory(SGCB) 2. For each SGCB Client requests GetSGCBValues		
<u>Comment</u>		

sSg3	SelectActiveSG	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 16.2, 16.3 IEC 61850-8-1 Subclause 16.2.1, 16.2.5		
<u>Expected result</u> 1. DUT sends SelectActiveSG response+ 2. DUT has updated the activated setting group value and last activation time (when the setting group value has changed) 3. DUT sends GetDataValues response+		
<u>Test description</u> 1. Client requests SelectActiveSG of the first setting group 2. Client requests GetSGCBValues 3. Client requests GetDataValues to verify the SG values in the first setting group when available 4. Repeat steps 1 to 3 for other setting groups for this SGCB		
<u>Comment</u>		

sSgN1	Setting group selection services with wrong parameters	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 16.2, 16.3 IEC 61850-8-1 Subclause 16.2		
<u>Expected result</u> a) DUT sends SelectActiveSG response- with data access error=object-value-invalid b) DUT sends GetSGCBValues response- with data access error=object-non-existent		
<u>Test description</u> a) Client requests SelectActiveSG with 0 and then NumOfSg+1 setting group b) Client requests GetSGCBValues with unknown object		
<u>Comment</u>		

A4.7 Unbuffered Reporting

Abstract test cases

Test case	Test case description
sRp1	Request GetLogicalNodeDirectory(URCB) and check response Request GetURCBValues of all responded URCB's
sRp2	Verify the reporting of optional fields of a URCB Configure/enable a URCB with all optional fields combinations: sequence-number, report-time-stamp, reason-for-inclusion, data-set-name, and/or data-reference (IEC 61850-7-2 Subclause 17.2.3.2.2.1), force/trigger a report and check the reports contain the enabled optional fields
sRp3	Verify the trigger options of a URCB Configure and enable a URCB with optional fields: sequence-number, report-time-stamp, reason-for-inclusion, data-set-name and data-reference and check the reports are transmitted according to the following trigger options: on integrity on update (dupd) on update with integrity on data change (dchg) on data and quality change on data and quality change with integrity period Verify the validity of the ReasonCode (IEC 61850-7-2 Subclause 17.2.3.2.2.9) Verify that when more trigger options are met preferably only one report is generated (IEC 61850-7-2 Subclause 17.2.3.2.3.2) Verify that reports are only sent when RptEna is set to True. (IEC 61850-7-2 Subclause 17.2.2.5), when reporting is disabled no reports shall be transmitted
sRp4	General interrogation (IEC 61850-7-2 Subclause 17.2.2.13) Setting the GI attribute of an URCB shall start the general-interrogation process. One report with the current data values will be sent. After initiation of the general-interrogation, the GI attribute is reset to False.
sRp5	Segmentation of reports Verify that if a long report does not fit in one message, the report is split into sub-reports. Enable sequence-number and report-time-stamp optional field and check validity of: (IEC 61850-7-2 Subclause 17.2.3.2.2.5) SqNum (not changed) SubSqNum (0 for first report, incrementing, roll-over) MoreSeqmentsFollow TimeOfEntry (not changed as SqNum is not altered) (IEC 61850-7-2 Subclause 17.2.3.2.2.9) Verify that an update of a data value during sending of a segmented report caused by an integrity or general-interrogation trigger can be interrupted by a report with change of one of the data values with a new sequence number. (IEC 61850-7-2 Subclause 17.2.3.2.3.5) A new request for general-interrogation shall stop the sending of remaining segments of the GI-report that is still going on. A new GI-report shall start with a new sequence number and the sub-sequence number shall be 0 (IEC 61850-7-2 Subclause 17.2.3.2.3.4)
sRp6	Configuration revision (IEC 61850-7-2 Subclause 17.2.2.7) Verify that ConfRev represents a count of the number of times the configuration of the data set referenced by DataSet has been changed. Changes that are counted are: deletion of a member of the data-set re-ordering of members in the data-set Verify that the server increments the ConfRev in case the data sets changes due to processing of ACSI services ConfRev shall never be 0 (zero) in case DataSet is not null.
sRp7	Verify that after a restart of the server, the value of ConfRev is restored to its original value of the base local configuration OR the value is retained from the configuration prior to restart (PIXIT)

Test case	Test case description
sRp8	<p>Buffer Time (IEC 61850-7-2 Subclause 17.2.2.9) Verify that in the case where a second internal notification of the same member of a DATA-SET has occurred prior to the expiration of BufTm, the server: (IEC 61850-7-2 Subclause 17.2.2.9) shall for status information behave as if BufTm has expired and immediately send the report, restart the timer with value BufTm and process the second notification or may for analogue information behave as if BufTm has expired and immediately transmit the report for transmission, restart the timer with value BufTm and process the second notification or for analogue information substitute the current value in the pending report with the new one. Configure Buffer Time to 1.000 ms and force a data value change of multiple dataset members within buffer time. Server shall send not more than one report per buffer time with all the data values changes since last report. Verify that the value 0 for buffer time indicates that the buffer time attribute is not used. (IEC 61850-7-2 Subclause 17.2.2.9) Verify that the BufTm value can contain at least the value 360.0000 (= 1 h in ms)</p>
sRp9	Verify the DUT can send reports with data objects
sRp10	Verify the DUT can send reports with data attributes
sRp11	Verify the DUT send any buffered events before the integrity report
sRp12	Verify the DUT send any buffered events before the GI report
sRp13	Verify that the server sets URCB Owner to a non-NULL value when the URCB is configured by a client and reset to NULL when a client releases the URCB. For a pre-assigned URCB the server resets the Owner to the pre-assigned client address
sRp14	Verify that the DUT can process an URCB with maximum name length for RptID and DataSet (IEC 61850-7-2 Subclause 22.2)
sRp15	Verify report with dataset with most to least data hierarchy FCDA elements

Test case	Test case description
sRpN1	Request GetURCBValues with wrong parameters and verify response- service error (IEC 61850-7-2 Subclause 17.2.5.3)
sRpN2	Configure reporting with trigger option GI (not dchg, qchg, dupd, integrity). When enabled only GI reports are transmitted. No reports shall be send when generating events (IEC 61850-7-2 Subclause 17.2.3.2.3.4)
sRpN3	Setting the integrity period to 0 with TrgOps = integrity will result in no integrity reports will be sent (IEC 61850-7-2 Subclause 17.2.3.2.3.3)
sRpN4	Incorrect configuration of a URCB: configure when enabled, configure ConfRev and SqNum and configure with unknown data set
sRpN5	Exclusive use of URCB and lost association Configure a URCB and set the Resv attribute and enable it. Verify another client cannot set any attribute of that URCB (IEC 61850-7-2 Subclause 17.2.4.5)
sRpN6	Configure unsupported URCB options (PIXIT); Configure unsupported trigger options, optional fields and related parameters
sRpN7	Verify another client can not configure a pre-assigned URCB
sRpN8	Verify that when TrgOps - GI is not set the device does not send reports with reason code GI when RptEna=FALSE setting the GI=TRUE will fail when RptEna=TRUE resetting the GI=FALSE is accepted with no impact (no GI report)

Note: sRpN6 and sRpN7 are not applicable for part 8-1.

Detailed test procedures

sRp1	GetLogicalNodeDirectory(URCB) and GetURCBValues	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 10.2.2 and 17.2.5.3 IEC 61850-8-1 Subclause 12.3.1 and 17.2.4		
<u>Expected result</u>		
<ol style="list-style-type: none"> 1. DUT sends GetLogicalNodeDirectory(URCB) response+ with a list of URCB's 2. DUT sends GetURCBValues response+ 		
<u>Test description</u>		
<ol style="list-style-type: none"> 1. For each logical node Client requests GetLogicalNodeDirectory(URCB) 2. For each URCB Client requests GetURCBValues 		
<u>Comment</u>		

sRp2	Reporting of optional fields for a URCB	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 17.2.2.8 IEC 61850-8-1 Subclause 17.2		
<u>Expected result</u>		
<ol style="list-style-type: none"> 1. DUT sends SetURCBValues response+ 2. DUT sends SetURCBValues response+ 3. DUT sends SetURCBValues response+ and sends a correct report according to IEC 61850-8-1 table 64 with all data set members for reason general-interrogation and for reason data-change only the changed data set members. The configured and reported optional fields shall match and the sequence number starts with 0 the report time stamp has UTC value and matches the trigger time the reason for inclusion matches the trigger option the configured and reported data set name do match the data-reference(s) match the data set member(s) Configuration revision matches the URCB configuration 4. DUT sends SetURCBValues response+ and sends no reports anymore 		
<u>Test description</u>		
<ol style="list-style-type: none"> 1. Client configures an available URCB using SetURCBValues with all combinations of the following optional fields: sequence-number, report-time-stamp, reason-for-inclusion, data-set-name, data-reference and conf-rev 2. Client enables the URCB (set RptEna to True) 3. Client requests a GI report (trigger option general-interrogation) or EQUIPMENT SIMULATOR triggers a report (trigger option data change) 4. Client disables the URCB (set RptEna to False) 5. Repeat step 1 to 4 for next combination of optional fields 		
<u>Comment</u>		

sRp3	Trigger options for a URCB	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 17.2.3.2.3 IEC 61850-8-1 Subclause 8.1.3.9, 17.2, TISSUE #780, PIXIT: Rp10		
<u>Expected result</u> 1. DUT sends SetURCBValues response+ 2. DUT sends SetURCBValues response+ 3. DUT sends a report according to trigger option integrity reports are transmitted at integrity period timeout data change reports are transmitted at the minimum buffer timeout the sequence number is incremented the configured and reported optional fields shall match the reason code(s) is one of the configured trigger options 4. DUT sends SetURCBValues response+ 5. DUT does not sends reports		
<u>Test description</u> 1. Configure an available URCB using SetURCBValues with all optional fields, the minimum BufTm and one of the following trigger options: on integrity on update (dupd) on data-change on data-change and quality-change on data-change, quality-change and integrity with a valid integrity period 2. Client enables the RCB, set RptEna to True 3. EQUIPMENT SIMULATOR forces several data changes of one or more data set members in the data set 4. Client disables the URCB, set RptEna to False 5. EQUIPMENT SIMULATOR forces several data changes of one or more data set members in the data set 6. Repeat step 1 to 5 for next trigger option combination		
<u>Comment</u>		

sRp4	General interrogation URCB and RptID	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 17.2.3.2.3.4 IEC 61850-8-1 Subclause 8.1.3.9, 17.2		
<u>Expected result</u> 2. DUT sends SetURCBValues response+ and then sends GI report 3. DUT sends GetURCBValues response+, the GI attribute is reset 7. DUT sends SetURCBValues response+ and a report where the RptID value is the exact reference of the URCB: RptID includes the index when the URCB is indexed, without index when not 9. DUT sends SetURCBValues response+ and a report where the RptID value is the configured value		
<u>Test description</u> 1. Client configures and enables an available URCB 2. Client requests SetURCBValues to trigger the GI report 3. Client requests GetURCBValues 4. Client disables the URCB When the URCB RptID is dynamic ("dyn") 5. Client configures the URCB RptID with an empty string 6. Client enables the URCB and triggers the GI report 7. Client disables the URCB 8. Client configures the URCB RptID with a non-empty string 9. Client enables the URCB and triggers the GI report 10. Client disables the URCB		
<u>Comment</u> URCB RptID of the DUT is dynamic.		

sRp5	Segmentation of reports URCB	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 17.2.3.2.2.5 IEC 61850-8-1 Subclause 8.1.3.8, 17.2, PIXIT: Rp3		
<u>Expected result</u> 2. DUT sends associate respond+ for minimum PDU size. DUT may send associate respond- for smaller PDU size 4. The DUT sends the integrity reports in two or more segments. The segmented report messages have the same SqNum, the same report time stamp, incremented SubSqNum starting with 0 and MoreSegmentsFollow is set except for the last report segment		
<u>Test description</u> 1. Select a data set of which the reported values do not fit in one MMS PDU (reduce the MMS PDU size when necessary) 2. Client associates with the minimum PDU size. In case the minimum PDU size does not cause segmentation use an smaller PDU size When association succeeds 3. Client configures an available URCB with the data set, trigger-condition integrity, and at least the optional fields sequence-number and report-time-stamp 4. Client enables the RCB and waits for several integrity reports 5. Client disables the RCB		
<u>Comment</u>		

sRp9	Report data objects (FCD)	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 17.2 IEC 61850-8-1 Subclause 17.2		
<u>Expected result</u>		
2. Verify the DUT does report the whole data object		
<u>Test description</u>		
1. Client configures an available URCB using SetURCBValues with a data-set that contains at least one data object, and all optional fields with the trigger option: data-change. Client enables the URCB. 2. Change a data attribute within one data object in the data-set		
<u>Comment</u>		

sRp11	Send buffered events before integrity report	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 17.2.3.2.3.3 IEC 61850-8-1 Subclause 17.2		
<u>Expected result</u>		
3. DUT does send 2 reports: first a report with the buffered data-change and then the integrity report		
<u>Test description</u>		
1. Client configures an available URCB using SetURCBValues with a valid BufTm, a valid IntgPd whose value is smaller than the BufTm value and all optional fields with the trigger options: data-change and integrity 2. Client enables the URCB, set RptEna to True 3. EQUIPMENT SIMULATOR forces a data change in the data set, wait for integrity report 4. Client disables the URCB		
<u>Comment</u>		

sRp12	Send buffered events before GI report	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 17.2.3.2.3.3 IEC 61850-8-1 Subclause 17.2		
<u>Expected result</u>		
4. DUT does send 2 reports: first a report with the buffered data-change and then the GI report		
<u>Test description</u>		
1. Client configures an available URCB using SetURCBValues with all optional fields, with a valid BufTm and with the trigger options: data-change and integrity 2. Client enables the URCB, set RptEna to True 3. EQUIPMENT SIMULATOR forces a data change in the data set 4. Client requests SetURCBValues with GI=TRUE before BufTm expiration 5. Client disables the URCB		
<u>Comment</u>		

sRp14	Max URCB name length	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 22.2 IEC 61850-8-1 Subclause 17.1.3		
<u>Expected result</u>		
2. DUT sends SetURCBValues response+ 3. DUT sends SetURCBValues response+ 4. DUT sends GI report with correct data set name and report ID value		
<u>Test description</u>		
1. Configure DUT with URCB with maximum name length (32 including the index), with maximum name length of the data set (32 chars) and report ID (129 chars) when these attributes are not fixed ("fix") 2. Client requests SetURCBValues of another URCB with maximum length data set and maximum length report ID when these attributes are dynamic ("dyn") 3. Client enables both URCBs with at least OptFlds data-set-name and trigger condition GI 4. Client requests SetURCBValues with GI=true 5. Client disables both URCBs		
<u>Comment</u>		

sRp15	Report with dataset with most to least data hierarchy FCDA elements	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 10.2.2, 13.3.2, 13.3.6, TISSUE #1174 IEC 61850-8-1 Subclause 14.3		
<u>Expected result</u>		
1. In the SCL file the FCDA doName contains maximum one dot (for example doName="neut.phsA" and daName="cVal.mag.f") 2. DUT sends a SetURCBValues response+ 3. DUT sends the GI report with correct data references		
<u>Test description</u>		
1. Configure one or more URCBs with one or more datasets with the least detailed data hierarchy to the most detailed data hierarchy available in the DUT data model. For example: <ul style="list-style-type: none"> - MMXU.PhV - MMXU.A.phsA - MMXU.A.phsB.cVal - MMXU.A.phsC.cVal.mag - MMXU.A.neut.cVal.mag.f 2. Client enables the URCB with all supported optional fields and trigger condition GI 3. Client request GI		
<u>Comment</u>		

sRpN1	Incorrect GetURCBValues	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 17.2.5.3 IEC 61850-8-1 Subclause 17.2		
<u>Expected result</u>		
1. DUT sends response with data access error "object-non-existent"		
<u>Test description</u>		
1. Client request GetURCBValues with unknown URCB object		
<u>Comment</u>		

sRpN2	Only trigger option GI	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 17.2.3.2.2.9 IEC 61850-8-1 Subclause 17.2		
<u>Expected result</u>		
3. DUT does not send reports		
<u>Test description</u>		
1. Configure an available URCB using SetURCBValues with all optional fields, BufTm=0, IntgPd=1000 and only trigger option general-interrogation		
2. Client enables the URCB, set RptEna to True		
3. EQUIPMENT SIMULATOR forces several data set changes of one or more data set members in the data set		
<u>Comment</u>		

sRpN3	Integrity period zero URCB	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 17.2.3.2.2.9 IEC 61850-8-1 Subclause 17.2		
<u>Expected result</u>		
4. DUT does not send reports when reporting is enabled		
<u>Test description</u>		
1. Configure an available URCB using SetURCBValues with trigger option Integrity and integrity period 0		
2. Wait one minute		
3. Client enables the URCB, set RptEna to True		
4. Wait one minute		
5. Client disables the URCB, set RptEna to False		
<u>Comment</u>		

sRpN4	Incorrect configuration of URCB	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 17.2.5.4 IEC 61850-8-1 Subclause 17.1.3, 8.1.3.4.3, Table 61		
<u>Expected result</u> 2. DUT sends SetURCBValues response- with data access error "temporarily-unavailable" 4. DUT sends SetDataValues response- with data access error "object-access-denied" 5. DUT sends SetURCBValues response- with data access error "object-access-denied" 6. DUT sends SetURCBValues response- with data access error "object-value-invalid" 7. DUT sends SetURCBValues response+ 8. DUT sends SetURCBValues response- with data access error "temporarily-unavailable"		
<u>Test description</u> 1. Client configures and enables an available URCB 2. Client requests SetURCBValues with one of the following "dyn" attributes: RptID, DatSet, OptFlds, BufTm, TrgOps, IntgPd 3. Client disables the URCB 4. Client requests SetDataValues with one of the following attributes: ConfRev, SqNum, TimeOfEntry and Owner (when available) 5. Client requests SetURCBValues with the "fix" or "conf" attributes from step 2 When datSet="dyn" then perform the following steps 6. Client requests SetURCBValues with unknown DatSet 7. Client changes datSet to empty 8. Client enables an URCB with empty DatSet		
<u>Comment</u>		

sRpN5	Exclusive use of URCB	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 17.2.1 IEC 61850-8-1 Subclause 17.2 PIXIT: As2		
<u>Expected result</u> 2. DUT sends SetURCBValues response- with data access error = temporarily-unavailable 4. DUT sends SetURCBValues response+ 8. DUT sends SetURCBValues response+ 11. DUT sends SetURCBValues response- with data access error = temporarily-unavailable 14. DUT sends SetURCBValues response+		
<u>Test description</u> 1. Client1 reserves an available URCB 2. Client2 reserves and configures the same URCB by requesting SetURCBValues with one of the following dynamic ("dyn") attributes Resv, RptID, DatSet, OptFlds, BufTm, TrgOps, IntgPd 3. Client1 resets the reservation of the URCB 4. Client2 reserves and configures the URCB 5. Client2 resets the reservation of the URCB 6. Client1 reserves the URCB 7. Client1 aborts and re-establishes the association 8. Client1 configures the URCB 9. Client1 resets the reservation of the URCB 10. Client1 reserves the URCB 11. Client2 requests SetURCBValues of a "dyn" attribute 12. Disable the TCP communication between Client1 and the DUT. E.g. disconnect the physical link, between two Ethernet switches (preventing Ethernet hardware error detection at both client and server), some seconds longer than the KEEP ALIVE timeout specified in the PIXIT and then enable TCP communication. E.g. connect the physical link 13. Client2 reserves the URCB 14. Client2 requests SetURCBValues of a "dyn" attribute		
<u>Comment</u> Step 12: Tested with a KEEP ALIVE timeout of 17 seconds.		

sRpN8	Trigger option GI not set	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 17.2.3.2.2.9 IEC 61850-8-1 Subclause 17.2		
<u>Expected result</u> 1. DUT sends SetURCBValues response+ 2. DUT sends SetURCBValues response+, however sends no GI report 3. DUT sends SetURCBValues response+ 4. DUT sends SetURCBValues response- with data access error "temporarily unavailable" 5. DUT sends SetURCBValues response+ 6. DUT sends SetURCBValues response+ and sends no GI report 7. DUT sends SetURCBValues response+ and does send the GI report		
<u>Test description</u> 1. Client configures and enables an available URCB without trigger option general-interrogation 2. Client requests SetURCBValues with GI=TRUE 3. Client disables the URCB and set trigger option general-interrogation 4. Client requests SetURCBValues with GI=TRUE 5. Client enables the URCB 6. Client requests SetURCBValues with GI=FALSE 7. Client requests SetURCBValues with GI=TRUE		
<u>Comment</u>		

A4.8 Buffered Reporting

Abstract test cases

Test case	Test case description
sBr1	Request GetLogicalNodeDirectory(BRCB) and check response Request GetBRCBValues of all responded BRCB's
sBr2	Verify the reporting of optional fields of a BRCB Configure/enable a BRCB with all optional fields combinations: sequence-number, report-time-stamp, reason-for-inclusion, data-set-name, data-reference, buffer-overflow, and/or entryID (IEC 61850-7-2 Subclause 17.2.3.2.2.1), force/trigger a report and check the reports contain the enabled optional fields
sBr3	Verify the trigger options of a BRCB Configure and enable a BRCB with optional fields: sequence-number, report-time-stamp, reason-for-inclusion, data-set-name, data-reference, buffer-overflow, and entryID and check the reports are transmitted according to the following trigger options: on integrity on update (dupd) on update with integrity on data change (dchg) on data and quality change on data and quality change with integrity period Verify the validity of the ReasonCode (IEC 61850-7-2 Subclause 17.2.3.2.2.9) Verify that when more trigger options are met preferably only one report is generated (IEC 61850-7-2 Subclause 17.2.3.2.3.2) Verify that reports are only sent when RptEna is set to True. (IEC 61850-7-2 Subclause 17.2.2.5), when reporting is disabled no reports shall be transmitted
sBr4	General interrogation (IEC 61850-7-2 Subclause 17.2.2.13) Setting the GI attribute of a BRCB shall start the general-interrogation process. One report with the current data values will be sent. After initiation of the general-interrogation, the GI attribute is reset to False.
sBr5	Segmentation of reports Verify that if a long report does not fit in one message, the report is split into sub-reports. Enable sequence-number and report-time-stamp optional field and check validity of: (IEC 61850-7-2 Subclause 17.2.3.2.2.5) SqNum (not changed) SubSqNum (0 for first report, incrementing, roll-over) MoreSeqmentsFollow TimeOfEntry (not changed as SqNum is not altered) (IEC 61850-7-2 Subclause 17.2.3.2.2.9) Verify that an update of a data value during sending of a segmented report caused by an integrity or general-interrogation trigger can be interrupted by a report with change of one of the data values with a new sequence number. (IEC 61850-7-2 Subclause 17.2.3.2.3.5) A new request for general-interrogation shall stop the sending of remaining segments of the GI-report that is still going on. A new GI-report shall start with a new sequence number and the sub-sequence number shall be 0 (IEC 61850-7-2 Subclause 17.2.3.2.3.4) Verify that when OptFlds=sequence-number is NOT set, neither SubSqNum nor SqNum are present in the sub-reports (IEC 61850-7-2 Subclause 17.2.3.2.2.4 and 17.2.3.2.2.5)
sBr6	Configuration revision (IEC 61850-7-2 Subclause 17.2.2.7) Verify that ConfRev represents a count of the number of times the configuration of the data set referenced by DatSet has been changed. Changes that are counted are: deletion of a member of the data-set re-ordering of members in the data-set Verify that the server increments the ConfRev in case the data sets changes due to processing of ACSI services ConfRev shall never be 0 (zero) in case DatSet is not null
sBr7	Verify that after a restart of the server, the value of ConfRev is restored to its original value of the base local configuration OR the value is retained from the configuration prior to restart (PIXIT)

sBr8	<p>Buffer Time (IEC 61850-7-2 Subclause 17.2.2.9) Verify that in the case where a second internal notification of the same member of a DATA-SET has occurred prior to the expiration of BufTm, the server: (IEC 61850-7-2 Subclause 17.2.2.9) shall for status information behave as if BufTm has expired and immediately send the report, restart the timer with value BufTm and process the second notification or may for analogue information behave as if BufTm has expired and immediately transmit the report for transmission, restart the timer with value BufTm and process the second notification or may for analogue information substitute the current value in the pending report with the new one. Configure Buffer Time to 1.000 ms and force a data value change of multiple dataset members within buffer time. Server shall send not more than one report per buffer time with all the data values changes since last report. Verify that the value 0 for buffer time indicates that the buffer time attribute is not used. (IEC 61850-7-2 Subclause 17.2.2.9) Verify that the BufTm value can contain at least the value 3.600.000 (= 1 h in ms)</p>
sBr9	Verify the DUT can send reports with data objects
sBr10	Verify the DUT can send reports with data attributes
sBr11	Verify that all buffered events shall be sent before integrity reports can be sent (IEC 61850-7-2 Subclause 17.2.3.2.3.3)
sBr12	Verify that all buffered events shall be sent before the GI report can be sent (IEC 61850-7-2 Subclause 17.2.3.2.3.3)
sBr13	Verify that the server sets BRCB Owner to a non-NULL value when the BRCB is configured by a client and reset to NULL when a client releases the BRCB. For a pre-assigned BRCB the server resets the Owner to the pre-assigned client address
sBr14	Verify that the DUT can process a BRCB with maximum name length for RptID and DataSet (IEC 61850-7-2 Subclause 22.2)
sBr15	Verify report with Dataset with most to least data hierarchy FCDA elements
	Specific to BRCB (leave a gap for future sRp test cases)
sBr20	<p>Buffered reporting (BRCB) state machine (IEC 61850-7-2 Subclause 17.2.2 figure 24) with setting the EntryID Verify events are buffered after the association is released Verify reporting is disabled after the association is lost Verify that not received reports while not associated are received now in the correct order (SOE) (IEC 61850-7-2 Subclause 17.2.1, IEC 61850-7-2 Subclause 17.2.2.5) Do the same but now set PurgeBuf to True before enabling the reporting. No stored buffered reports shall be send (IEC 61850-7-2 Subclause 17.2.2.14) Force buffer overflow, the OptFlds buffer-overflow shall be set in the first report that is sent with events that occurred after the overflow. (IEC 61850-7-2 Subclause 17.2.3.2.2.8)</p>
sBr21	<p>Buffered reporting (BRCB); buffering events (IEC 61850-7-2 Subclause 17.2.3.2.3.6) without setting the EntryID Verify that after the association is available again and after the client has NOT set the EntryID, and enabled the BRCB, the BRCB shall start sending the both already sent reports and new reports of events that have been buffered. The BRCB shall use the sequence and subsequence numbers so that no gaps occur.</p>
sBr22	Verify that integrity reports are buffered
sBr23	<p>Verify successful ResvTms behaviour On ResvTms = -1 the BRCB can be used by the pre-assigned client On ResvTms = 0 a client can reserve the BRCB by writing a value and configure the BRCB On lost association the reserved BRCB is released after the ResvTms number of seconds (ResvTms set to zero) On lost association, within ResvTms time none of other clients can reserve the BRCB except the one who did it originally (the client restores association)</p>
sBr24	<p>Verify that a SetBRCBValues request, for setting ResvTms, shall: Generate a negative response if the BRCB's ResvTms value = -1. Generate a negative response if the BRCB's ResvTms value is non-zero and if the SetBRCBValues request is being issued by another client for whom the BRCB is not reserved. Generate a negative response if the ResvTms value to be set is negative.</p>

sBr25	Verify that a change of one of the following BRCB parameters purges the buffer: RptID, BufTm, TrgOps, IntgPd, DatSet. A change of OptFlds shall not purge the buffer. (IEC 61850-7-2 Table 37)
sBr26	Verify that after setting an invalid, null or non-existing EntryID the DUT sends all reports in the buffer
sBr27	Verify that when the BRCB state is RptEna=FALSE a GetBRCBValues shall return the EntryID value that represents the last (newest) entry that has been entered into the buffer. And when the BRCB RptEna=TRUE: The value of EntryID, returned in a GetBRCBValues response, shall be the EntryID of the last EntryID formatted and queued for transmission.
sBr28	Verify that only the last buffered GI report is transmitted after restoring a lost association

Test case	Test case description
sBrN1	Request GetBRCBValues with wrong parameters and verify response- service error (IEC 61850-7-2 Subclause 17.2.3.3.2)
sBrN2	Configure reporting with trigger option GI (not dchg, qchg, dupd, integrity). When enabled only GI reports are transmitted. No reports shall be send when generating events (IEC 61850-7-2 Subclause 17.2.3.2.3.4)
sBrN3	Setting the integrity period to 0 with TrgOps = integrity will result in no integrity reports will be sent (IEC 61850-7-2 Subclause 17.2.2.12)
sBrN4	Incorrect configuration of a BRCB: configure when enabled, configure ConfRev and SqNum and configure with unknown data set
sBrN5	Exclusive use of BRCB and lost association Configure a BRCB and enable it. Verify another client can not set attributes value in this BRCB. (IEC 61850-7-2 Subclause 17.2.1)
sBrN6	Configure unsupported BRCB options (PIXIT); Configure unsupported trigger options, optional fields and related parameters
sBrN7	Verify another client can not configure a pre-assigned BRCB
sBrN8	Verify that when TrgOps - GI is not set the device does not send reports with reason code GI when RptEna=FALSE setting the GI=TRUE will fail when RptEna=TRUE resetting the GI=FALSE is accepted with no impact (no GI report)

Note: sBrN6 and sBrN7 are not applicable for part 8-1

Detailed test procedures

sBr1	GetLogicalNodeDirectory(BRCB) and GetBRCBValues	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 10.2.2 and 17.2.3.3 IEC 61850-8-1 Subclause 12.3.1 and 17.2.2		
<u>Expected result</u>		
<ol style="list-style-type: none"> 1. DUT sends GetLogicalNodeDirectory(BRCB) response+ with a list of BRCB's 2. DUT sends GetBRCBValues response+ 		
<u>Test description</u>		
<ol style="list-style-type: none"> 1. For each logical node Client requests GetLogicalNodeDirectory(BRCB) 2. For each BRCB Client requests GetBRCBValues 		
<u>Comment</u>		

sBr2	Reporting of optional fields for a BRCB	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 17.2.2.8 IEC 61850-8-1 Subclause 17.2.1		
<u>Expected result</u> 1. DUT sends SetBRCBValues response+ 2. DUT sends SetBRCBValues response+ 3. DUT sends a correct report according to trigger option and IEC 61850-8-1 table 64 with all data set members for reason integrity and otherwise only the changed members. The configured and reported optional fields shall match the sequence number starts with 0 the report time stamp has UTC value and matches the trigger time the reason for inclusion matches the trigger option the configured and reported data set name do match the data-reference(s) match the data set member(s) EntryID not zero Configuration revision matches the BRCB configuration 4. DUT sends SetBRCBValues response+ and sends no reports anymore		
<u>Test description</u> 1. Client configures an available BRCB using SetBRCBValues with all combinations of the following optional fields: sequence-number, report-time-stamp, reason-for-inclusion, data-set-name, data-reference, buffer overflow, entryID and conf-rev 2. Client enables the BRCB (set RptEna to True) 3. Client waits for a report (trigger option integrity) or EQUIPMENT SIMULATOR triggers a report (trigger option data-change) 4. Client disables the BRCB (set RptEna to False) 5. Repeat step 1 to 4 for next combination of optional field		
<u>Comment</u>		

sBr3	Trigger options for a BRCB	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 17.2.2.8 IEC 61850-8-1 Subclause 8.1.3.9, 17.2.1, TISSUE #780, PIXIT: Rp10		
<u>Expected result</u> 1. DUT sends SetBRCBValues response+ 2. DUT sends SetBRCBValues response+ 3. DUT sends a report according to trigger option integrity reports shall be transmitted immediately at timeout data change reports are transmitted immediately after buffer timeout the first report has sequence number 0 the sequence number is incremented the configured and reported optional fields shall match the reason code(s) is one of the configured trigger options 4. DUT sends SetBRCBValues response+ 5. DUT does not sends reports		
<u>Test description</u> 1. Configure an available BRCB using SetBRCBValues with all optional fields, minimum BufTm and one of the following trigger options: on integrity on update (dupd) on data-change on data-change and quality-change on data-change, quality-change and integrity with a valid integrity period 2. Client enables the BRCB, set RptEna to True 3. EQUIPMENT SIMULATOR forces several data changes of one or more data set members in the data set 4. Client disables the BRCB, set RptEna to False 5. EQUIPMENT SIMULATOR forces several data changes of one or more data set members in the data set 6. Repeat step 1 to 5 for next trigger option combination		
<u>Comment</u>		

sBr4	General interrogation BRCB and RptID	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 17.2.2.8, 17.2.2.13 IEC 61850-8-1 Subclause 8.1.3.8, 17.2.1		
<u>Expected result</u> 3. DUT sends SetBRCBValues response+ and then sends GI report 4. DUT sends GetBRCBValues response+ with GI attribute not set 7. DUT sends SetBRCBValues response+ and a report where the RptID value is the exact reference of the BRCB: RptID includes the index when the BRCB is indexed, without index when not 10. DUT sends SetBRCBValues response+ and a report where the RptID value is the configured value		
<u>Test description</u> 1. Client configures an available BRCB 2. Client enables the BRCB 3. Client requests SetBRCBValues to set the GI report 4. Client requests GetBRCBValues 5. Client disables the BRCB When the BRCB RptID is dynamic ("dyn") 6. Client configures the BRCB RptID with an empty string 7. Client enables the BRCB and triggers the GI report 8. Client disables the BRCB 9. Client configures the BRCB RptID with a non-empty string 10. Client enables the BRCB and triggers the GI report 11. Client disables the BRCB		
<u>Comment</u> BRCB RptID of the DUT is dynamic.		

sBr5	Segmentation of reports BRCB	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 17.2.2.8, 17.2.3.2.2.5, 17.2.3.2.2.9, 17.2.3.2.3.5, 17.2.3.2.3.4 IEC 61850-8-1 Subclause 8.1.3.8, 17.2.1, PIXIT: Rp3		
<u>Expected result</u> 2. DUT sends associate respond+ for minimum PDU size. DUT may send associate respond- for smaller PDU size 4. The DUT sends the integrity reports in two or more segments. The segmented report messages have the same SqNum, the same report time stamp and EntryID, incremented SubSqNum starting with 0 and MoreSegmentsFollow is set except for the last report segment		
<u>Test description</u> 1. Select a data set of which the reported values do not fit in one MMS PDU (reduce the MMS PDU size when necessary) 2. Client associates with the minimum PDU size. In case the minimum PDU size does not cause segmentation use a smaller PDU size When association succeeds 3. Client configures an available BRCB with the data set, trigger-condition integrity, and at least the optional fields sequence-number, entryID and report timestamp 4. Client enables the RCB and waits for several integrity reports 5. Client disables the RCB		
<u>Comment</u>		

sBr9	Report data objects (FCD)	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 17.2.2 IEC 61850-8-1 Subclause 17.2		
<u>Expected result</u>		
2. Verify the DUT does report the whole data object		
<u>Test description</u>		
1. Client configures an available BRCB using SetBRCBValues with a data-set that contains at least one data object, and all optional fields with the trigger option: data-change. Client enables the BRCB. 2. Change a data attribute within one data object in the data-set		
<u>Comment</u>		

sBr11	Send buffered events before integrity report	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 17.2.3.2.3.3 IEC 61850-8-1 Subclause 17.2		
<u>Expected result</u>		
3. DUT does send 2 reports: first a report with the buffered data change event and then the integrity report		
<u>Test description</u>		
1. Client configures an available BRCB using SetBRCBValues with a valid BufTm, a valid IntgPd whose value is smaller than the BufTm value and all optional fields with the trigger options: data-change and integrity 2. Client enables the BRCB, set RptEna to True 3. EQUIPMENT SIMULATOR forces a data change in the data set, wait for integrity report 4. Client disables the BRCB		
<u>Comment</u>		

sBr12	Send buffered events before GI report	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 17.2.3.2.3.3 IEC 61850-8-1 Subclause 17.2		
<u>Expected result</u>		
4. DUT does send 2 reports: first a report with the buffered data-change and then the general interrogation report		
<u>Test description</u>		
1. Client configures an available BRCB using SetBRCBValues with all optional fields, with a valid BufTm and with the trigger options: data change and general-interrogation 2. Client enables the BRCB, set RptEna to True 3. EQUIPMENT SIMULATOR forces a change in the data set 4. Client requests SetBRCBValues(GI=TRUE) before BufTm expiration 5. Client disables the BRCB		
<u>Comment</u>		

sBr14	Max BRCB name length	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 22.2 IEC 61850-8-1 Subclause 17.1.2		
<u>Expected result</u>		
2. DUT sends SetBRCBValues response+ 3. DUT sends SetBRCBValues response+ 4. DUT sends GI report with correct data set name and report ID value		
<u>Test description</u>		
1. Configure DUT with BRCB with maximum name length (32 including the index), with maximum name length of the data set (32 chars) and report ID (129 chars) when these attributes are not fixed ("fix") 2. Client requests SetBRCBValues of another BRCB with maximum length dataset and report ID when these attributes are dynamic ("dyn") 3. Client enables both BRCBs with at least OptFlds data-set-name and trigger condition GI 4. Client requests SetBRCBValues with GI=true 5. Client disables both BRCBs		
<u>Comment</u>		

sBr15	Report with dataset with most to least data hierarchy FCDA elements	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 10.2.2, 13.3.2, 13.3.6, TISSUE #1174 IEC 61850-8-1 Subclause 14.3		
<u>Expected result</u>		
1. In the SCL file the FCDA doName contains maximum one dot (for example doName="neut.phsA" and daName="cVal.mag.f") 2. DUT sends a SetBRCBValues response+ 3. DUT sends the GI report with correct data references		
<u>Test description</u>		
1. Configure one or more BRCBs with one or more datasets with the least detailed data hierarchy to the most detailed data hierarchy available in the DUT data model. For example: <ul style="list-style-type: none"> - MMXU.PhV - MMXU.A.phsA - MMXU.A.phsB.cVal - MMXU.A.phsC.cVal.mag - MMXU.A.neut.cVal.mag.f 2. Client enables the BRCB with all supported optional fields and trigger condition GI 3. Client request GI		
<u>Comment</u>		

Specific test procedures for buffered reporting

sBr20	Buffered reporting state machine with setting the EntryID	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 17.2.1, 17.2.2.14, 17.2.2.5, 17.2.3...8 IEC 61850-8-1 Subclause 17.2.1 PIXIT: Rp7		
<p><u>Expected result</u></p> <p>1 to 6: Events are buffered, the EntryID value is not equal to the last received EntryID</p> <p>7. The DUT sends SetBRCBValues response+ when the EntryID value exists in the queue of entries and response- when the EntryID value does not exist (buffer overflow)</p> <p>8. The DUT sends reports in the time sequence order starting with the next event after the event specified in EntryID</p> <p>9. The DUT sends reports in the time sequence order starting with the next event after the event specified in EntryID</p> <p>10. Reports that are buffered while not associated have been purged, purged reports are not sent after enabling the BRCB. The first report is the GI report</p> <p>11. The Optional field buffer-overflow shall be set only in the first report that is sent after enabling the BRCB. All reports that are in the buffer are sent in time sequence order</p> <p>12. The DUT sends reports in the time sequence order starting with the next event after the event specified in EntryID</p>		
<p><u>Test description</u></p> <p>1. Client configures an available BRCB with all optional fields with the trigger data-change and general-interrogation</p> <p>2. Client enables the BRCB (set RptEna to True)</p> <p>3. EQUIPMENT SIMULATOR forces several data changes</p> <p>4. Client requests Release</p> <p>5. EQUIPMENT SIMULATOR forces several more data changes</p> <p>6. Client re-establishes the association and requests GetBRCBValues</p> <p>7. Client sets the EntryID to the last received report in the BRCB</p> <p>8. Client enables the BRCB, wait for report(s) and disables the BRCB</p> <p>9. Repeat steps 2-8, but Abort the association at step 4</p> <p>10. Repeat steps 2-8, but set PurgeBuf=TRUE instead of EntryID at step 7 and force a GI at step 8</p> <p>11. Repeat steps 2-8, but generate more data changes in step 5 than the buffer can hold, to force a buffer overflow (PIXIT)</p> <p>12. Repeat step 2-8, but disconnect the link longer then the lost detection time and connect the link again.</p>		
<p><u>Comment</u></p>		

sBr21	Buffered reporting state machine without setting EntryID	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 17.2.1, 17.2.2.14, 17.2.2.5, 17.2.3...8 IEC 61850-8-1 Subclause 17.2.1 PIXIT: Rp7		
<u>Expected result</u> 1 to 6: Events are buffered, the EntryID value is not the same as the EntryID in the last received report 7. The Optional field buffer-overflow shall be set only in the first report that is sent after enabling the BRCB. All reports that are in the buffer (from step 2 and step 5) are sent in time sequence order		
<u>Test description</u> 1. Client configures an available BRCB with all optional fields with the trigger data-change 2. Client enables the BRCB (set RptEna to True) 3. EQUIPMENT SIMULATOR forces several data changes 4. Client requests Release 5. EQUIPMENT SIMULATOR forces several more data changes 6. Client re-establishes the association and requests GetBRCBValues 7. Client enables the BRCB, wait for report(s) and disables the BRCB		
<u>Comment</u>		

sBr22	Buffered reporting of integrity reports	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 17.2.1, 17.2.2.14, 17.2.2.5, 17.2.3...8 IEC 61850-8-1 Subclause 17.2.1 PIXIT: Rp7		
<u>Expected result</u> 1 to 6: Events are buffered and the EntryID value is not the same as the EntryID in the last received report 7. The DUT sends SetBRCBValues response+ 8. The DUT sends (integrity) reports in the time sequence order starting with the next event after the event specified in EntryID		
<u>Test description</u> 1. Client configures an available BRCB with all optional fields with the trigger integrity 2. Client enables the BRCB (set RptEna to True) 3. Wait for several integrity periods 4. Client requests Release 5. Wait for several integrity periods 6. Client re-establishes the association and requests GetBRCBValues 7. Client sets the EntryID to the last received report in the BRCB 8. Client enables the BRCB, wait for integrity report(s) and disables the BRCB		
<u>Comment</u>		

sBr25	Buffer is purged on re-configuration	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 17.2.3, Table 37 IEC 61850-8-1 Subclause 17.2		
<u>Expected result</u> 3. dchg and integrity reports are received. 6. the EntryID is not the same as the EntryID in the last received report 8..12. The buffer is purged, purged reports are not transmitted. The first report has a report time stamp value newer than the time of changing the entry in the BRCB which causes the buffer purge 13. The buffer is NOT purged, buffered reports are transmitted		
<u>Test description</u> 1. Client configures a BRCB with all optional fields with the trigger options: data-change and Integrity with a valid Integrity period 2. Client enables the BRCB (set RptEna to True) 3. EQUIPMENT SIMULATOR forces several data changes 4. Client requests Release 5. EQUIPMENT SIMULATOR forces several more data changes 6. Client re-establishes the association and requests GetBRCBValues 7. Client changes the RptID, when rptid is "dyn" 8. Client enables the BRCB and waits at least one integrity period 9. Repeat step 3 to 8 and at step 7 client changes the BufTm, when buftm is "dyn" 10. Repeat step 3 to 8 and at step 7 client changes the TrgOps, when trgops is "dyn" 11. Repeat step 3 to 8 and at step 7 client changes the IntgPd, when intgpd is "dyn" 12. Repeat step 3 to 8 and at step 7 client changes the DatSet, when datset is "dyn" 13. Repeat step 3 to 8 and at step 7 client changes the OptFlds, when optflds is "dyn"		
<u>Comment</u>		

sBr26	Unkown and all zero EntryID	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 17.2.3.2.2.9, 17.2.2.15, 17.2.2.1 IEC 61850-8-1 Subclause 17.1.2		
<u>Expected result</u> 3. The DUT sends data-change and integrity reports 7. DUT sends SetBRCBValues response- with data access error code object-value-invalid 8. DUT responds with the EntryID value of the last Entry entered in the buffer 9. All reports in the buffer are transmitted (the BRCB transits from disabled to enabled state). The BufOvl flag is only set in the first report 12. DUT sends SetBRCBValues response+ 13. DUT responds with the EntryID value of the last Entry entered in the buffer 14. All reports in the buffer are transmitted. The BufOvl flag is only set in the first report		
<u>Test description</u> 1. Client configures a BRCB with all optional fields with the trigger options data-change and integrity with a valid integrity period 2. Client enables the BRCB (set RptEna to True) 3. EQUIPMENT SIMULATOR forces several data changes 4. Client requests Release 5. EQUIPMENT SIMULATOR forces several more data changes 6. Client re-establishes the association and requests GetBRCBValues 7. Client sets an unknown EntryID value 8. Client requests GetBRCBValues 9. Client enables the BRCB and waits for some reports 10. Client disables the BRCB 11. Repeat steps 2 to 6 12. Client sets an all zero EntryID value 13. Client requests GetBRCBValues 14. Client enables the BRCB and waits for some reports 15. Client disables the BRCB		
<u>Comment</u> On setting an all zero EntryID the state shall transition from resync to disabled (clause 17.2.2.1).		

sBr27	GetBRCBValues and EntryID	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 17.2.3.2.2.9 IEC 61850-8-1 Subclause 17.1.2		
<u>Expected result</u> 3. DUT sends data-change and integrity reports 7. DUT responds the EntryID of the last entry that has been entered into the buffer (this value is different from the EntryID received in the last report) 9. DUT transmits the reports in the buffer (not transmitted before) 10. DUT responds the EntryID of last entry that has been formatted and queued for transmission 12. DUT responds the EntryID of the last entry that has been entered into the buffer 14. DUT responds the EntryID of the last entry that has been entered into the buffer 15. DUT transmits all reports in the buffer (including the reports transmitted before) 16. DUT responds the EntryID of last entry that has been formatted and queued for transmission		
<u>Test description</u> 1. Client configures a BRCB with all optional fields with the trigger option data change and integrity with a valid integrity period 2. Client enables the BRCB (set RptEna to True) 3. EQUIPMENT SIMULATOR forces several data changes 4. Client requests Release 5. EQUIPMENT SIMULATOR forces several more data changes 6. Client re-establishes the association 7. Client request GetBRCBValues 8. Client sets EntryID to last received EntryID 9. Client enables the BRCB 10. Client request GetBRCBValues while DUT is sending buffered reports 11. Client disables the BRCB 12. Client request GetBRCBValues 13. Client sets EntryID = 0 14. Client request GetBRCBValues 15. Client enables the BRCB 16. Client request GetBRCBValues while DUT is sending buffered reports 17. Client disables the BRCB		
<u>Comment</u>		

sBr28	Only last GI report is transmitted	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 17.2.3 IEC 61850-8-1 Subclause 17.1.2		
<u>Expected result</u>		
3. DUT transmits the integrity reports and 3 GI reports 8. DUT transmits the old and new integrity reports and only the last GI report		
<u>Test description</u>		
1. Client configures a BRCB with all optional fields with the trigger options general-interrogation and data change and integrity with a valid integrity period 2. Client enables the BRCB (set RptEna to True) 3. Client requests GI report 3 times 4. Client requests Release and waits several integrity periods 5. Client re-establishes the association 6. Client sets EntryID to all zero 7. Client request GetBRCBValues 8. Client enables the BRCB		
<u>Comment</u>		

sBrN1	Incorrect GetBRCBValues	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 17.2.3.3.2 IEC 61850-8-1 Subclause 17.2.2		
<u>Expected result</u>		
1. DUT sends response with data access error "object-non-existent"		
<u>Test description</u>		
1. Client request GetBRCBValues with unknown BRCB object		
<u>Comment</u>		

sBrN2	Only trigger option GI	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 17.2.3.2.2.9 IEC 61850-8-1 Subclause 17.1.2		
<u>Expected result</u>		
3. DUT does not send reports		
<u>Test description</u>		
1. Configure an available BRCB using SetBRCBValues with all supported fields, BufTm=0, IntgPd=1000 and only trigger option general-interrogation 2. Client enables the BRCB, set RptEna to True 3. EQUIPMENT SIMULATOR forces several data changes of one or more data set members in the data set		
<u>Comment</u>		

sBrN3	Integrity period zero	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 17.2.3.2.2.9 IEC 61850-8-1 Subclause 17.2		
<u>Expected result</u>		
4. DUT does not send integrity reports		
<u>Test description</u>		
1. Configure an available BRCB using SetBRCBValues with trigger option Integrity and integrity period 0 2. Wait one minute 3. Client sets the BRCB RptEna to True (without synchronizing the BRCB by setting the BRCB EntryID) 4. Wait one minute 5. Client disables the BRCB		
<u>Comment</u>		

sBrN4	Incorrect configuration of BRCB	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 17.2.2.1 IEC 61850-8-1 Subclause 17.1.2, 8.1.3.4.3, Table 61		
<u>Expected result</u>		
2. DUT sends SetBRCBValues response- with data access error "temporarily-unavailable" 4. DUT sends SetDataValues response- with data access error "object-access-denied" 5. DUT sends SetBRCBValues response- with data access error "object-access-denied" 6. DUT sends SetBRCBValues response- with data access error "object-value-invalid" 7. DUT sends SetBRCBValues response+ 8. DUT sends SetBRCBValues response- with data access error "temporarily-unavailable"		
<u>Test description</u>		
1. Client configures and enables an available BRCB 2. Client requests SetBRCBValues with a new valid value on each one of the following "dyn" attributes: RptID, DatSet, OptFlds, BufTm, TrgOps, IntgPd and the attributes PurgeBuf, EntryID 3. Client disables the BRCB 4. Client requests SetDataValues with one of the following attributes: ConfRev, SqNum, TimeOfEntry and Owner (when available) 5. Client requests SetBRCBValues with the "fix" or "conf" attributes from step 2 When datSet="dyn" then perform the following steps 6. Client requests SetBRCBValues with unknown DatSet 7. Client changes datSet to empty 8. Client enables a BRCB with empty DatSet		
<u>Comment</u>		

sBrN5	Exclusive use of BRCB	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 17.2 IEC 61850-8-1 Subclause 17.2		
<u>Expected result</u> 2. DUT sends SetBRCBValues response- with data access error "temporarily-unavailable"		
<u>Test description</u> 1. Client1 configures and enables an available BRCB 2. Client2 configures the same BRCB by requesting SetBRCBValues with one of the following dynamic ("dyn") attributes RptID, DatSet, OptFlds, BufTm, TrgOps, IntgPd, PurgeBuf, EntryID 3. Client1 disables the BRCB		
<u>Comment</u>		

sBrN8	Trigger option GI not set	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 17.2.3.2.2.9 IEC 61850-8-1 Subclause 17.2		
<u>Expected result</u> 1. DUT sends SetBRCBValues response+ 2. DUT sends SetBRCBValues response+, however sends no GI report 3. DUT sends SetBRCBValues response+ 4. DUT sends SetBRCBValues response- with data access error "temporarily unavailable" 5. DUT sends SetBRCBValues response+ 6. DUT sends SetBRCBValues response+ and sends no GI report 7. DUT sends SetBRCBValues response+ and does send the GI report		
<u>Test description</u> 1. Client configures and enables an available BRCB without trigger option general-interrogation 2. Client requests SetBRCBValues with GI=TRUE 3. Client disables the BRCB and set trigger option general-interrogation 4. Client requests SetBRCBValues with GI=TRUE 5. Client enables the BRCB 6. Client requests SetBRCBValues with GI=FALSE 7. Client requests SetBRCBValues with GI=TRUE		
<u>Comment</u>		

A4.11 Control

Abstract test cases

Test case	Test case description
sCt1	Force and check each path in control state machine for several control objects with control models a direct with normal security (IEC 61850-7-2 Subclause 20.2.1) b SBO-control with normal security (IEC 61850-7-2 Subclause 20.2.2) c direct with enhanced security (IEC 61850-7-2 Subclause 20.3.2) d SBO-control with enhanced security (IEC 61850-7-2 Subclause 20.3.3) e Compare detailed test cases for each control model
sCt2	Change control model using online services and verify that the control object responds according to the new control model
sCt3	Time Operate a second enhanced security control object before the activation time of the first control object (PIXIT)
sCt4	Verify that the stSeld attribute value is set/reset as specified in the state machines
sCt5	Verify test flag in SelectWithValue/Operate and Beh = test (IEC 61850-7-4 Annex A Table A.1) <ul style="list-style-type: none"> When LN Beh is "on" the control Requests are rejected with AddCause "Blocked-by-mode" When LN Beh is "test/blocked" the control requests are accepted When LN Beh is "test" the control requests are accepted
sCt6	Select all SBO control objects and cancel them in opposite order. In case a control action is blocked because another control is already running the AddCause shall be "1-of-n-control"
sCt7	Verify that with interlock or synchro check conditions the specified checks are performed and the command is executed accordingly (IEC 61850-7-2 Subclause 20.5.2.5) <ul style="list-style-type: none"> When the interlock check fails with AddCause "Blocked-by-interlocking" When the interlock check passes When the synchro check fails with AddCause "Blocked-by-synchrocheck" When the synchro check passes
sCt8	Operate (without select) a SBO control object and verify that the request is rejected with AddCause "Object-not-selected" (IEC 61850-7.2 table 47)
sCt9	Select the same control object twice, verify that the second select request is rejected with AddCause "Object-already-selected" (IEC 61850-7-2 table 47) and the object remains in selected state (Operate.req is accepted)
sCt10	Operate control value is the same as the actual status value (On-On or Off-Off) and verify that the control request is rejected with AddCause "Position-reached" (IEC 61850-7-2 table 47, PIXIT)
sCt11	Select the same control object from 2 different clients. Verify that the control requests from the second client are rejected with AddCause "Locked-by-other-client" (IEC 61850-7-2 table 47)
sCt12	Select / Operate a unknown control object and verify that the control requests are rejected with AddCause "Unknown" (IEC 61850-7-2 table 47)
sCt13	Verify that the Select request on a direct operate control object is rejected with AddCause "Not-supported" (IEC 61850-7-2 table 47)
sCt14	Operate the same direct control object twice from 2 clients (IEC 61850-7-2 table 54, PIXIT) and verify that the last control request is rejected with AddCause "Command-already-in-execution"
sCt15	Verify that on LN behaviour off or on/blocked control requests are rejected with AddCause "Blocked-by-Mode" (IEC 61850-7-4 Annex A)
sCt16	Verify that when Loc is set remote control requests are rejected with AddCause "Blocked-by-switching-hierarchy"
sCt17	Verify that with station level control authority (LocSta=T) remote control requests are rejected with AddCause "Blocked-by-switching-hierarchy".
sCt18	Verify that on CmdBlk.stVal is set the control requests are rejected with AddCause "Blocked-by-command" (IEC 61850-7-2 table 54)

sCtl19	Verify that when the blkEna is set the control requests are terminated with AddCause "Time-limit-over"
sCtl20	Verify that when parameters are changed after the select respond, the operate request is rejected with AddCause "Parameter-change-in-execution" (IEC 61850-7-2 table 54)
sCtl21	Verify that when tap changer has reached the limit (EndPosR or EndPosL in YLTC) control requests are rejected with AddCause "Step-limit" (IEC 61850-7-2 table 54)
sCtl22	Verify that with insufficient access authority control requests are rejected with AddCause "No-access-authority". (IEC 61850-7-2 table 54)
sCtl23	Verify that when an APC control action end position has overshoot the command terminates with AddCause "Ended-with-overshoot". (IEC 61850-7-2 table 54)
sCtl24	Verify that when an APC control action is aborted due to deviation between the command value and the measured value the control terminates with AddCause "Abortion-due-to-deviation". (IEC 61850-7-2 table 54)
sCtl25	Verify that a cancel request is successful when the control object is in the unselected state (IEC 61850-7-2 table 47)
sCtl26	Verify that when the control object is in the WaitForChange state the cancel or SelectWithValue request is rejected with AddCause "Command-already-in-execution" (IEC 61850-7-2 table 54)
sCtl27	Verify that the SelectWithValue request on a SBOs control object is rejected with AddCause "Not-supported" (IEC 61850-7-2 table 54)

Note: sCtl12 and sCtl22 are not applicable for part 8-1

Detailed test procedures

sCtl5	Operate with test flag and test mode	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 20.2 and 20.3 IEC 61850-7-4 Annex A IEC 61850-8-1 Subclause 20		
<u>Expected result</u> 1. Commands are not accepted with AddCause = blocked-by-mode 2. Control commands are accepted and executed 3. Commands are not accepted with AddCause = blocked-by-mode 4. Control commands are accepted, however output is not activated (blocked) 5. Commands are not accepted with AddCause = blocked-by-mode For normal security the AddCause is optional		
<u>Test description</u> a) DOns 1. LN.Beh = on and client sends correct control command with test flag set If Beh = test is supported perform steps 2 and 3 2. LN.Beh = test and client sends correct control command with test flag set 3. LN.Beh = test and client sends correct control command without test flag set If Beh = test-blocked is supported perform step 4 and 5 4. LN.Beh = test-blocked and client sends correct control command with test flag set 5. LN.Beh = test-blocked and client sends correct control command without test flag set b) Repeat step 1 to 5 for SBOs c) Repeat step 1 to 5 for DOes b) Repeat step 1 to 5 for SBOes		
<u>Comment</u> Note 1: Step 1 is mandatory Note 2: To change the Beh the client can operate the Mod. The Mod.Operate.Test attribute value shall be ignored by the DUT DUT does not support Beh = test-blocked, therefore steps 4) and 5) are not applicable and not tested.		

sCt16	Select/Cancel multiple SBO control objects	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 20 IEC 61850-8-1 Subclause 20, PIXIT: Ct9, Ct21		
<u>Expected result</u> b) SBOs 1. DUT sends response+ for non-interlocked objects and response- with optional AddCause "1-of-n control" for interlocked objects (PIXIT) 2. DUT sends Cancel response+ d) SBOes 3. DUT sends response+ for non-interlocked objects and response- with AddCause "1-of-n control" for interlocked objects (PIXIT) 4. DUT sends Cancel response+		
<u>Test description</u> b) SBOs 1. Client request Select for multiple SBOs control objects 2. Client request Cancel for the successful selected control object(s) in reverse order d) SBOes 3. Client requests SelectWithValue for multiple SBOes control objects 4. Client request Cancel for the successful selected control object(s) in reverse order		
<u>Comment</u>		

sCt18	Direct operate a SBO control object	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 20.3.3 IEC 61850-8-1 Subclause 20.6, 20.7 and 20.8		
<u>Expected result</u> b) DUT responds with Operate response- with optional AddCause "object-not-selected" and the stSeld=F or the DUT sends Select response+ or Operate response- with AddCause "object-not-selected" d) DUT responds with Operate response- with AddCause "object-not-selected" and the stSeld=F or the DUT sends SelectWithValue response+ or Operate response- with AddCause "object-not-selected"		
<u>Test description</u> b) Client sends correct Operate request of an unselected SBOs object d) Client sends correct Operate request of an unselected SBOes object To verify the unselected state client requests either GetDataValues(stSeld) or Select resp. SelectWithValue		
<u>Comment</u>		

sCtl9	Select a SBO control object twice	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 20.3.3 IEC 61850-8-1 Subclause 20.6, 20.7 and 20.8		
<u>Expected result</u> b) SBOs: 1. DUT responds with Select response+ 2. DUT responds with Select response- 3. DUT responds with Operate response+ d) SBOes: 1. DUT responds with SelectWithValue response+ 2. DUT responds with SelectWithValue response- with AddCause = object-already-selected 3. DUT responds with Operate response+ 4. DUT sends CommandTermination+		
<u>Test description</u> b) SBOs: 1. Client sends correct Select request of an unselected SBOs object 2. Same client sends correct Select request of the same SBOs object before the sboTimeout 3. Client sends correct Operate request before the sboTimeout of step 1 d) SBOes: 1. Client sends correct SelectWithValue request of an unselected SBOes object 2. Same client sends correct SelectWithValue request of the same SBOes object before the sboTimeout 3. Client sends correct Operate request before the sboTimeout of step 1 4. EQUIPMENT SIMULATOR moves to the new position		
<u>Comment</u>		

sCtl10	SelectWithValue or Operate value is same as actual value	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 20 IEC 61850-8-1 Subclause 20.6, 20.7 and 20.8, PIXIT: Ct5		
<u>Expected result</u> a) DUT responds as specified in PIXIT b) DUT responds as specified in PIXIT c) DUT responds as specified in PIXIT d) DUT responds as specified in PIXIT Allowed AddCause values are "position-reached" or "time-limit-over"		
<u>Test description</u> a) DOns: Client sends Operate request with actual value of a DOns object b) SBOs: Client sends Select and Operate request with actual value of a SBOs object c) DOes: Client sends Operate request with actual value of a DOes object d) SBOes: Client sends SelectWithValue request with actual value of a SBOes object, on response+ Operate with actual value request		
<u>Comment</u> The DUT sends CommandTermination with AddCause "Time-limit-over".		

sCtl11	Select a SBO control object twice from 2 clients	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 20.3.3 Table 47 IEC 61850-8-1 Subclause 20.6, 20.7 and 20.8 PIXIT:Ct6		
<u>Expected result</u> b) SBOs: 1. DUT responds with Select response+ 2. DUT responds with Select response- 3. DUT responds with Cancel response- 4. DUT responds with Operate response+ d) SBOes: 1. DUT responds with SelectWithValue response+ 2. DUT responds with SelectWithValue response- with AddCause "object-already-selected" (compare table 47) 3. DUT responds with Operate response- with AddCause "locked-by-other-client" 4. DUT responds with Cancel response- with AddCause "locked-by-other-client" 5. DUT responds with Operate response+ and CommandTermination+		
<u>Test description</u> b) SBOs: 1. Client1 sends correct Select request of an unselected SBOs object 2. Client2 sends correct Select request of the same SBOs object before the sboTimeout 3. Client2 sends correct Cancel request of the same SBOs object before the sboTimeout 4. Client1 sends correct Operate request before the sboTimeout d) SBOes: 1. Client1 sends correct SelectWithValue request of an unselected SBOes object 2. Client2 sends correct SelectWithValue request of the same SBOes object before the sboTimeout 3. Client2 sends correct Operate request of the same SBOes object before the sboTimeout 4. Client2 sends correct Cancel request of the same SBOes object before the sboTimeout 5. Client1 sends correct Operate request before the sboTimeout		
<u>Comment</u>		

sCtl14	Operate a direct control object twice from 2 clients	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 20 IEC 61850-8-1 Subclause 20.6, 20.7 and 20.8 PIXIT: Ct16		
<u>Expected result</u> c) DOes 1. DUT responds with Operate response+ 2. DUT responds as specified in PIXIT In case of Operate response- the AddCause = command-already-in-execution		
<u>Test description</u> c) DOes 1. Client1 sends correct Operate request of a DOes object 2. Client2 sends correct Operate request of the same DOes object within the operate timeout		
<u>Comment</u>		

sCtl25	Cancel unselected object	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 20.5.2.6, table 47 IEC 61850-8-1 Subclause 20.6, 20.7 and 20.8		
<u>Expected result</u> b) DUT responds with Cancel response+ d) DUT responds with Cancel response+		
<u>Test description</u> b) Client sends a Cancel request to an unselected SBOs control object d) Client sends a Cancel request to an unselected SBOes control object		
<u>Comment</u>		

sCtl26	Cancel at WaitForChange state	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 20.5.2.6, table 54 IEC 61850-8-1 Subclause 20.6, 20.7 and 20.8		
<u>Expected result</u> c) DUT responds with Operate response+ and Cancel response- with AddCause "Command-already-in-execution". d) SBOes 1. DUT responds with SelectWithValue and Operate response+ and Cancel response- with AddCause "Command-already-in-execution" 2. DUT responds with SelectWithValue and Operate response+ and SelectWithValue response- with AddCause "Command-already-in-execution"		
<u>Test description</u> Force EQUIPMENT SIMULATOR to keep the position c) Client sends DOes – Operate and Cancel request before Operate timeout d) SBOes 1. Client sends SelectWithValue, Operate and Cancel request before Operate timeout 2. Client sends SelectWithValue, Operate and SelectWithValue request before Operate timeout		
<u>Comment</u>		

A4.11a Control DOns

Abstract test cases

Test case	Test case description
sDOns1	Send a correct Operate request
sDOns2	Send an Operate request, resulting in 'Test not ok'
sDOns3	Send an TimeActivatedOperate, request resulting in response-
sDOns4	Send a correct TimeActivatedOperate request Verify the TimeActivatedOperateTermination+
sDOns5	Send a correct TimeActivatedOperate request Verify each of these paths will return the device to the Ready state and the TimeActivatedOperateTermination-: <ul style="list-style-type: none"> - Force a 'Test not ok' - Send a correct Cancel request

sDOns3 is not applicable for part 8-1 (compare TISSUE #783, part 8-1 does not support Authentication).

Detailed test procedures for DOns

sDOns1	Operate	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 20.2.1 IEC 61850-8-1 Subclause 20.7		
<u>Expected result</u> 1. DUT responds with Operate response+		
<u>Test description</u> 1. Client sends correct Operate request		
<u>Comment</u>		

sDOns2	Operate response-	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 20.2.1 IEC 61850-8-1 Subclause 20.7, PIXIT: Ct12		
<u>Expected result</u> 1. DUT responds with Operate response-		
<u>Test description</u> 1. Client requests Operate forcing a "test not ok" as specified in PIXIT		
<u>Comment</u>		

A4.11c Control DOes

Abstract test cases

Test case	Test case description
sDOes1	Send a correct Operate request Verify each of these paths will return the device to the Ready state and verify the CommandTermination: <ul style="list-style-type: none"> - force the equipment simulator to move to the requested new state - force the equipment simulator to keep the old state (AddCause: Time-limit-over or Invalid-position) - force the equipment simulator to move to the 'between' state (AddCause: Invalid-position)
sDOes2	Send an Operate request, resulting in 'Test not ok'.
sDOes3	Send a TimeActivatedOperate request, resulting in response-
sDOes4	Send a correct TimeActivatedOperate request Verify the TimeActivatedOperateTermination+ Verify each of these paths will return the device to the Ready state and verify the CommandTermination: <ul style="list-style-type: none"> - force the equipment simulator to move to the requested new state - force the equipment simulator to keep the old state (AddCause: Time-limit-over or Invalid-position) - force the equipment simulator to move to the 'between' state (AddCause: Invalid-position)
sDOes5	Send a correct TimeActivatedOperate request Verify each of these paths will return the device to the Ready state and the TimeActivatedOperateTermination-: <ul style="list-style-type: none"> - Force a 'Test not ok' - Send a correct Cancel request

sDOes3 is not applicable for part 8-1 (compare TISSUE #783, part 8-1 does not support Authentication).

Detailed test procedures for DOes

sDOes1	Operate and CommandTermination	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 20.3.2 IEC 61850-8-1 Subclause 20.7 and 20.8		
<u>Expected result</u>		
<ol style="list-style-type: none"> 1. DUT responds with Operate response+ 2. DUT reports CommandTermination+ 3. After timeout DUT reports CommandTermination- with AddCause "Invalid-position" or "Time-limit-over" 4. After timeout DUT reports CommandTermination- with AddCause "Invalid-position" 		
<u>Test description</u>		
<ol style="list-style-type: none"> 1. Client sends correct Operate request followed by 2. Force EQUIPMENT SIMULATOR to go to the new state 3. Or force EQUIPMENT SIMULATOR to keep the old state 4. Or force EQUIPMENT SIMULATOR to go to the in between state (when DPC is supported) 		
<u>Comment</u>		
Step 3:The DUT seds Command Termination with AddCause "Invalid-position"		

sDOes2	Operate response-	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 20.3.3 IEC 61850-8-1 Subclause 20.7 and 20.8 PIXIT: Ct12		
<u>Expected result</u> 1. DUT responds with Operate response- and AddCause (PIXIT)		
<u>Test description</u> 1. Client sends incorrect Operate once request as specified in the PIXIT		
<u>Comment</u> The DUT seds Command Termination with AddCause "Not-supported"		

A4.11d Control SBOes

Abstract test cases

Test case	Test case description
sSBOes1	<p>Send a correct SelectWithValue and Operate request</p> <p>Verify each of these paths will return the device to the Unselected state and verify the CommandTermination:</p> <ul style="list-style-type: none"> - force the equipment simulator to move to the requested new state - force the equipment simulator to keep the old state (AddCause: Time-limit-over or Invalid-position) - force the equipment simulator to move to the 'between' state (AddCause: Invalid-position)
sSBOes2	<p>Send a correct SelectWithValue request</p> <p>Verify each of these paths will return the device to the Unselected state:</p> <ul style="list-style-type: none"> - Send a correct Cancel request - Wait for select timeout - Send a Release request - Send an Operate request resulting in 'Test not ok'
sSBOes3	Send a correct SelectWithValue and TimeActivatedOperate request, resulting in response-
sSBOes4	<p>Send a correct SelectWithValue request</p> <p>Send a correct TimeActivatedOperate Once request</p> <p>Verify the TimeActivatedOperateTermination+</p> <p>Verify each of these paths will return the device to the Unselected state and verify the CommandTermination:</p> <ul style="list-style-type: none"> - force the equipment simulator to move to the requested new state - force the equipment simulator to keep the old state (AddCause: Time-limit-over or Invalid-position) - force the equipment simulator to move to the 'between' state (AddCause: Invalid-position)
sSBOes5	<p>Send a correct SelectWithValue request</p> <p>Send a correct TimeActivatedOperate request</p> <p>Verify each of these paths will return the device to the Ready state and the TimeActivatedOperateTermination-:</p> <ul style="list-style-type: none"> - Force a 'Test not ok' - Send a correct Cancel request
sSBOes6	Select device using SelectWithValue with improper access rights. Access shall be denied (IEC 61850-7-2 Subclause 20.2.2) or send incorrect SelectWithValue request
sSBOes7	<p>Send a correct SelectWithValue request</p> <p>Verify that sending multiple Operate Many requests will return the device to the Ready state</p> <p>Verify that sending a Cancel request will return the device to the Unselected state</p>
sSBOes8	Verify that the Operate or Cancel request with different control parameters than the SelectWithValue is rejected with AddCause: Inconsistent-parameters

sSBOes3 is not applicable for part 8-1 (compare TISSUE #783, part 8-1 does not support Authentication).

Detailed test procedures for SBOes

sSBOes1	SelectWithValue, Operate and CommandTermination	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 20.3.3 IEC 61850-8-1 Subclause 20.6, 20.7 and 20.8		
<u>Expected result</u> 1. DUT responds with SelectWithValue response+ 2. DUT responds with Operate response+ 3. DUT reports CommandTermination+ 4. The control object returned to the "Unselected" state: stSeld=F or DUT sends SelectWithValue response+ or Operate response- with AddCause "Object-not-selected" 5. After operate timeout DUT reports CommandTermination- with AddCause "Invalid-position" or "Time-limit-over" 6. After operate timeout DUT reports CommandTermination- with AddCause "Invalid-position"		
<u>Test description</u> 1. Client sends correct SelectWithValue request 2. Client sends correct Operate request followed by 3. Force EQUIPMENT SIMULATOR to go to the new state 4. To verify the control object returned to the unselected state Client requests either GetDataValues(stSeld), SelectWithValue + Cancel or Operate 5. Repeat steps 1 to 4 but at step 3 force EQUIPMENT SIMULATOR to keep the old state (when possible) 6. Repeat steps 1 to 4 but at step 3 force EQUIPMENT SIMULATOR to go to the intermediate state (when DPC is supported)		
<u>Comment</u> Step 5: The DUT seds Command Termination with AddCause "Invalid-position"		

sSBOes2	SelectWithValue followed by Cancel, timeout or Operate response-	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 20.3.3 IEC 61850-8-1 Subclause 20.6, 20.7 and 20.8		
<u>Expected result</u> 1. DUT responds with Cancel response+ 2. DUT sends nothing 3. DUT sends Operate response- with a valid AddCause 4. DUT sends no control respond The control object returns to the "Unselected" state: stSeld=F or DUT sends SelectWithValue response+ or Operate response- with AddCause "object-not-selected"		
<u>Test description</u> Client sends correct SelectWithValue request followed by: 1. Client sends correct Cancel request 2. Or Client waits for select timeout 3. Or Client forces an Operate request resulting in "Test not ok" 4. Or Client releases and associates again Client requests either GetDataValues(stSeld) or SelectWithValue to verify the unselected state		
<u>Comment</u> Step 3: The DUT seds Command Termination with AddCause "Inconsistent-parameters"		

sSBOes6	Incorrect SelectWithValue	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 20.3.3 IEC 61850-8-1 Subclause 20.6 and 20.8.4, PIXIT: Ct10, Ct14		
<u>Expected result</u>		
1. DUT sends SelectWithValue response- with AddCause "Select-failed" or "Not-supported"		
<u>Test description</u>		
1. Client sends SelectWithValue request with incorrect originator category		
<u>Comment</u>		
The DUT seds Command Termination with AddCause "Not-supported"		

sSBOes8	Operate with different value then the SelectWithValue of a SBOes control object	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 table 54 IEC 61850-8-1 Subclause 20.6, 20.7 and 20.8		
<u>Expected result</u>		
1. DUT responds with SelectWithValue response+ 2. DUT responds with Operate response- with AddCause "Inconsistent-parameters" 3. The control object will return to the unselected state: stSeld=F or SelectWithValue response+ or Operate response- with AddCause "object-not-selected"		
<u>Test description</u>		
1. Client sends correct SelectWithValue request of an unselected SBOes object 2. Client sends Operate request of the selected object changing one of the following attributes to another value than the SelectWithValue: ctIVal, origin, ctINum, test and Check 3. Wait until control object returns to the "unselected state", client requests either GetDataValues(stSeld) or SelectWithValue 4. Repeat step 1-3 for the other attributes in step 2		
<u>Comment</u>		

A4.12 Time synchronization

Abstract test cases

Test case	Test case description
sTm1	Verify the DUT supports and executes the SCSM time synchronisation as configured in SCL
sTm2	Check report/logging timestamp accuracy and leap seconds known matches the documented timestamp quality of the server
sTm3	Verify that when the device supports time zones and daylight saving the time stamp of events and disturbance records are UTC time
sTm4	Verify the time management settings in logical node LTIM
sTm5	Verify the time master supervision in logical node LTMS

Test case	Test case description
sTmN1	Verify that when time synchronisation communication lost is detected after a specified period
sTmN2	On synchronisation error, deviation beyond time stamp tolerance shall be detected

Detailed test procedures

sTm1	SCSM time synchronisation (SNTP)	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 21 and 6.1.2.9.3 IEC 61850-8-1 Subclause 21 and 6.4.2 PIXIT: Tm3, Tm8		
<u>Expected result</u> 2. DUT sends the base UTC time value in the report timestamp or GOOSE timestamp or data value timestamp. Verify that the timestamp value is accurate +/-10 seconds compared to the time in the time server and that the LeapSecondsKnown is set 4. and 6. DUT sends the new UTC time value in the report data value timestamp or GOOSE timestamp or GetDataValues responddata value data value timestamp. Sending reports or GOOSE shall not be delayed by a time change.		
<u>Test description</u> 1. Configure <ul style="list-style-type: none"> • One SNTP time master • A non-zero UTC offset (when time zone is supported). • An URcb or BRcb with all optional fields with trigger option data-change and BufTm = 0 with FCD dataset elements or with FCDA (including the value, q and t) controllable by the EQUIPMENT SIMULATOR • Or a GoCB with adataset element controllable by the EQUIPMENT SIMULATOR • Or Client requests GetDataValues after each event (when reporting or GOOSE is not supported and when GetDataValues is supported) 2. Force an event using the EQUIPMENT SIMULATOR and Client requests GetDataValues of the DO (if used) 3. Test engineer changes the time at least +2 minutes in the TIME MASTER and wait till DUT takes over the new time (PIXIT) 4. Force an event using the EQUIPMENT SIMULATOR and Client requests GetDataValues of the DO (if used) 5. Test engineer changes the time at least -2 minutes in the TIME MASTER and wait till DUT takes over the new time (PIXIT) 6. Force an event using the EQUIPMENT SIMULATOR and Client requests GetDataValues of the DO (if used)		
<u>Comment</u>		

sTm2	Time stamp quality	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 21 and 6.1.2.9.3 IEC 61850-8-1 Subclause 21 and 6.4.2, table 32 PIXIT: Tm1		
<u>Expected result</u> 2. The TimeStamp – TimeQuality – TimeAccuracy matches with the documented resolution (PICS-T2) and the TimeStamp – TimeQuality – LeapSecondsKnown matches with the PIXIT		
<u>Test description</u> 1. Force an event using the EQUIPMENT SIMULATOR or subscribed GOOSE message 2. Client requests GetDataValues of the event or waits for a Report/GOOSE message with the state change		
<u>Comment</u> Verifying the timestamp accuracy is out-of-scope for the conformance test.		

sTmN1	Lost time synchronisation	<input checked="" type="checkbox"/> Passed <input type="checkbox"/> Failed <input type="checkbox"/> Inconclusive
IEC 61850-7-2 Subclause 21 and 6.1.2.9.3 IEC 61850-8-1 Subclause 21 and 6.4.2 PIXIT: Tm2, Tm5		
<u>Expected result</u> 1. DUT detects the lost time synch 2. DUT updates the event 3. DUT sends GetDataValues response+ or Report/GOOSE with time quality "ClockNotSynchronized"		
<u>Test description</u> 1. Test engineer disconnects all time masters and waits specified period 2. Force an event using the EQUIPMENT SIMULATOR or subscribed GOOSE message 3. Client requests GetDataValues of the event or waits for a Report/GOOSE message with the state change		
<u>Comment</u>		

ABOUT DNV GL

Driven by our purpose of safeguarding life, property and the environment, DNV GL enables organizations to advance the safety and sustainability of their business. We provide classification and technical assurance along with software and independent expert advisory services to the maritime, oil and gas, and energy industries. We also provide certification services to customers across a wide range of industries. Operating in more than 100 countries, our 16,000 professionals are dedicated to helping our customers make the world safer, smarter and greener.
