

7VE6 problem with default and control display with French language setting

Problem:

Faulty default and control display after change of the device language from English to French.
Device 7VE6, FW V4.61.01, P-Set V4.61.01 (Delivered until Digsig V4.88 installation)

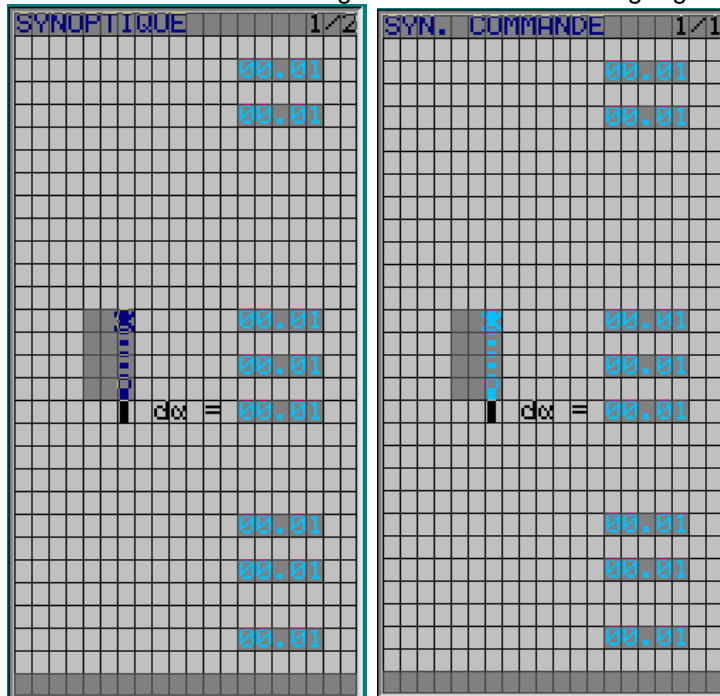

1. English device language -> default and control display correct

2. after change to french device language

-> missing symbols after the changing the language.

Remark: if there is one change EN to DE or other languages the problem does not appear.

Remedy:

One new Digi parameter-set with corrected French textpool is available in the download pool www.siprotec.com/protection

Parameter-set

7VE6xx_V046101_GerTreiDig0480_V01.00.06.exe (without help) und
7VE6xx_V046101_GerTreiDig0480_V01.01.06.exe (with help)

Procedure to load the updated parameter-set in case that one dex.-file with one faulty default and control display is present:

1. installation of the parameter-set in Digi
2. open the existent dex.-file with the faulty display offline.
3. change the language FR -> EN and save.
4. change the language FR -> EN and save
5. open the default and control display and check if it is correct now.
6. initialize the device and check the default and control display of the relay
7. In case that the display is still indicated incorrect please load the device firmware once again and initialize the device once.
