SIEMENS

SPCanywhere app now available for Android

The SPCanywhere app can be used to monitor and control the SPC intrusion detection system from wherever you are. In addition to Apple iOS, the app now runs on Android.

SPCanywhere is designed for mobile devices and tablets running Android version 2.3 (Gingerbread) and higher. The iOS version is optimized for the larger display of the iPhone 5.

The app remotely monitors and controls up to four SPC installations in a building and gives you an overview of the status of the intrusion detection system whenever needed. A graphical floor plan shows every floor of the building. Using the app, you can check all areas where detectors are installed. By tapping the respective icons, you can open doors, control exits and view live images from the building.

Developed by the Siemens Security Products business unit, the app is available in German, English, French, Italian, Spanish, Swedish, Dutch and Danish. The app uses the default language installed on the mobile device. SPCanywhere is available free of charge on Google Play and in the Apple App Store.
